

Clinical trial results:

A phase III, multi-centre, open study to assess antibody persistence after completion of the 3-dose primary vaccination course with GlaxoSmithKline (GSK) Biologicals' 10-valent pneumococcal conjugate vaccine in study 10PN-PD-DIT-048 (111654) in Singapore as well as the safety, reactogenicity and immunogenicity of GSK Biologicals' 10-valent pneumococcal conjugate vaccine when given as a booster dose at 18-21 months of age

Summary

EudraCT number	2012-000819-82
Trial protocol	Outside EU/EEA
Global end of trial date	17 February 2011

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2011
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 February 2011
Global end of trial reached?	Yes
Global end of trial date	17 February 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the antibody persistence induced by the GSK Biologicals' 10-valent pneumococcal conjugate vaccine (commercial lot versus phase III clinical lot), when co-administered with DTPa-IPV/Hib 13-16 months after completion of the 3-dose primary vaccination course in study 10PN-PD-DIT-048 (111654).

Protection of trial subjects:

All subjects were supervised closely for at least 30 minutes following vaccination with appropriate medical treatment readily available. Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines. Subjects were followed-up from the time the subject consents to participate in the study until she/he is discharged.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 July 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Singapore: 238
Worldwide total number of subjects	238
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	238
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This booster study was conducted in Singapore only whereas the primary vaccination phase (NCT00808444) was conducted in Singapore and Malaysia.

Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Synflorix Clinical-Commercial + Infanrix-IPV/Hib Group

Arm description:

Children primed with 3 doses of clinical lot of Synflorix + Rotarix co-administered with Infanrix-hexa in the primary phase of the study (NCT00808444) and boosted, with commercial lot of Synflorix coadministered with Infanrix-IPV/Hib. The Synflorix vaccine (clinical and commercial lots) was administered intramuscularly in the right deltoid or anterolateral thigh and the Infanrix-IPV/Hib vaccine was administered intramuscularly in the left deltoid or anterolateral thigh.

Arm type	Active comparator
Investigational medicinal product name	Pneumococcal vaccine GSK1024850A
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose, administered intramuscularly in the right deltoid or anterolateral thigh.

Investigational medicinal product name	Infanrix-IPV/Hib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose, administered intramuscularly in the left deltoid or anterolateral thigh.

Arm title	Synflorix Commercial-Commercial + Infanrix-IPV/Hib Group
------------------	--

Arm description:

Children primed with 3 doses of commercial lot of Synflorix co-administered with Rotarix and Infanrix-hexa in the primary phase of the study (NCT00808444) and boosted, with commercial lot of Synflorix co-administered with Infanrix-IPV/Hib. The Synflorix vaccine (commercial lots) was administered intramuscularly in the right deltoid or anterolateral thigh and the Infanrix-IPV/Hib vaccine was administered intramuscularly in the left deltoid or anterolateral thigh.

Primary: Concentrations of antibodies against vaccine pneumococcal serotypes

End point title	Concentrations of antibodies against vaccine pneumococcal serotypes ^[1]
End point description: Vaccine pneumococcal serotypes assessed were serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F. Concentrations were expressed as geometric mean concentrations (GMCs) in microgram per millilitre (µg/mL). Pneumococcal serotype specific total immunoglobuline G (IgG) antibodies were measured by 22F-inhibition Enzyme-linked immunosorbent assay (ELISA). The cut-off of the assay was 0.05 µg/mL.	
End point type	Primary
End point timeframe: Before booster vaccination at Month 0	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

Anti-18C [post-booster] (N=106;108)	19.8 (17.02 to 23.03)	24.19 (20.66 to 28.33)		
Anti-19F [pre-booster] (N=101;100)	1.11 (0.87 to 1.41)	0.97 (0.82 to 1.14)		
Anti-19F [post-booster] (N=106;108)	19.68 (17.22 to 22.51)	20.55 (17.62 to 23.98)		
Anti-23F [pre-booster] (N=106;103)	0.65 (0.5 to 0.83)	0.47 (0.38 to 0.59)		
Anti-23F [post-booster] (N=107;109)	7.19 (5.94 to 8.71)	6.83 (5.77 to 8.07)		

Statistical analyses

No statistical analyses for this end point

Secondary: Concentrations of antibodies against cross-reactive pneumococcal serotypes

End point title	Concentrations of antibodies against cross-reactive pneumococcal serotypes
End point description: Cross-reactive pneumococcal serotypes assessed were serotypes 6A and 19A. Concentrations were expressed as geometric mean concentrations (GMCs) in microgram per millilitre (µg/mL). The antibody concentrations against the cross-reactive pneumococcal serotypes 6A and 19A were determined by 22F-inhibition Enzyme-linked immunosorbent assay (ELISA). The cut-off of the assay was 0.05 µg/mL.	
End point type	Secondary
End point timeframe: Before and one month after booster vaccination (at Month 0 and Month 1)	

End point values	Synflorix Clinical-Commercial + Infanrix-IPV/Hib Group	Synflorix Commercial-Commercial + Infanrix-IPV/Hib Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	110	109		
Units: µg/mL				
geometric mean (confidence interval 95%)				
Anti-6A [pre-booster] (N=107;108)	0.23 (0.18 to 0.28)	0.21 (0.16 to 0.26)		
Anti-6A [post-booster] (N=106;108)	2.13 (1.7 to 2.66)	1.99 (1.6 to 2.49)		
Anti-19A [pre-booster] (N=110;106)	0.18 (0.14 to 0.22)	0.2 (0.15 to 0.25)		
Anti-19A [post-booster] (N=106;109)	2.13 (1.65 to 2.76)	2.96 (2.26 to 3.87)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited AEs: Within 4 days (Days 0-3) after booster vaccination. SAEs: During the entire study period, from the booster vaccination, at Month 0, up to the study end, at Month 1. Unsolicited AEs: Within 31 days (Days 0-30) after booster vaccination.

Adverse event reporting additional description:

The occurrence of reported AEs (all/related) was not available and is encoded as equal to the number of subjects affected. Systematically assessed Other Adverse Events are reported only for those participants who completed their symptoms sheet.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Synflorix Commercial-Commercial + Infanrix-IPV/Hib Group
-----------------------	--

Reporting group description:

Children primed with 3 doses of commercial lot of Synflorix co-administered with Rotarix and Infanrix-hexa in the primary phase of the study (NCT00808444) and boosted with commercial lot of Synflorix co-administered with Infanrix-IPV/Hib. The Synflorix vaccine (clinical and commercial lots) was administered intramuscularly in the right deltoid or anterolateral thigh and the Infanrix-IPV/Hib vaccine was administered intramuscularly in the left deltoid or anterolateral thigh.

Reporting group title	Synflorix Clinical-Commercial + Infanrix-IPV/Hib Group
-----------------------	--

Reporting group description:

Children primed with 3 doses of clinical lot of Synflorix + Rotarix co-administered with Infanrix-hexa in the primary phase of the study (NCT00808444) and boosted with commercial lot of Synflorix co-administered with Infanrix-IPV/Hib. The Synflorix vaccine (clinical and commercial lots) was administered intramuscularly in the right deltoid or anterolateral thigh and the Infanrix-IPV/Hib vaccine was administered intramuscularly in the left deltoid or anterolateral thigh.
