Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 June 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	04 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the clinical efficacy and safety of oral apremilast (APR) 30 mg twice a day (BID) compared with placebo, in subjects with moderate to severe plaque psoriasis at Week 16.

Protection of trial subjects:

Patient Confidentiality and Personal Data Protection

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 October 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 80
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	Belgium: 5
Country: Number of subjects enrolled	Czech Republic: 24
Country: Number of subjects enrolled	Estonia: 5
Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Germany: 20
Country: Number of subjects enrolled	Latvia: 73
Country: Number of subjects enrolled	Australia: 10
Country: Number of subjects enrolled	Netherlands: 2
Worldwide total number of subjects	250
EEA total number of subjects	145

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	225
From 65 to 84 years	25
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 65 study centers in 11 countries.

Pre-assignment

Screening details:

Participants were randomized 1:1:1 to the three treatment groups. Participants were stratified according to their calculated body mass index (BMI) categories at Screening (BMI < 30 or BMI ≥ 30).

Period 1

Period 1 title	Placebo-controlled Phase (Weeks 0-16)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received identically matching placebo tablets orally (PO), twice a day (BID) and 2-1 milliliter (ml) placebo subcutaneous (SC) saline injections once weekly (QW) during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.

Arm type	Placebo
Investigational medicinal product name	Placebo tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Identically matching placebo tablets BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase

Investigational medicinal product name	Placebo Injection
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

2-1ml placebo SC saline injections QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase

Arm title	Apremilast
------------------	------------

Arm description:

Participants received apremilast 30 mg PO BID plus 2-1ml placebo SC saline injections QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase

Arm type	Experimental
Investigational medicinal product name	Apremilast
Investigational medicinal product code	
Other name	CC-10004; Otezla
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
Apremilast 30 mg PO BID	
Investigational medicinal product name	Placebo Injection
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
2-1ml placebo SC saline injections QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase	
Arm title	Etanercept
Arm description:	
Participants received etanercept 50 mg by SC injection QW plus placebo tablets PO BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.	
Arm type	Active Control
Investigational medicinal product name	Etanercept
Investigational medicinal product code	
Other name	Enbrel
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Etanercept 50 mg by SC injection QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase	
Investigational medicinal product name	Placebo tablet
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Identically matching placebo tablets BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase	

Number of subjects in period 1	Placebo	Apremilast	Etanercept
Started	84	83	83
Safety population	84	83	83
Completed	75	77	81
Not completed	9	6	2
Consent withdrawn by subject	1	3	-
Adverse event, non-fatal	2	2	1
Unspecified	2	1	1
Lack of efficacy	4	-	-

Period 2

Period 2 title	Apremilast Extension Phase-Weeks 16-104
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo/Apremilast
------------------	--------------------

Arm description:

Participants who received placebo tablets PO BID and SC saline (placebo) injections (1mL x 2 injections SC) QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase week were switched to 30 mg Apremilast PO BID and remained on this dose through week 104.

Arm type	Experimental
Investigational medicinal product name	Apremilast
Investigational medicinal product code	
Other name	CC-10004; Otezla
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Apremilast 30 mg PO BID

Arm title	Apremilast/Apremilast
------------------	-----------------------

Arm description:

Participants who received apremilast 30 mg PO BID plus saline (placebo) injections (1mL x 2 injections SC) QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase continued on to receive apremilast 30mg PO BID through week 104.

Arm type	Experimental
Investigational medicinal product name	Apremilast
Investigational medicinal product code	
Other name	CC-10004; Otezla
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Apremilast 30 mg PO BID

Arm title	Etanercept/Apremilast
------------------	-----------------------

Arm description:

Participants who received etanercept 50 mg by SC injection QW plus placebo tablets PO BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase, were switched at week 16 to apremilast 30 mg PO BID through week 104.

Arm type	Experimental
Investigational medicinal product name	Apremilast
Investigational medicinal product code	
Other name	CC-10004; Otezla
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Apremilast 30 mg PO BID

Number of subjects in period 2^[1]	Placebo/Apremilast	Apremilast/Apremilast	Etanercept/Apremilast
Started	73	74	80
Received Treatment	73	74	79
Completed	47	41	50
Not completed	26	33	30
Consent withdrawn by subject	8	5	11
Adverse event, non-fatal	3	4	3
Non-compliance to study drug	-	1	1
Lost to follow-up	6	13	6
Lack of efficacy	9	10	8
Protocol deviation	-	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: There are fewer participants in this period because some patients discontinued the study at or prior to Week 16. Six subjects completed Period 1 but did not continue into Period 2.

Baseline characteristics

Reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received identically matching placebo tablets orally (PO), twice a day (BID) and 2-1 milliliter (ml) placebo subcutaneous (SC) saline injections once weekly (QW) during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.	
Reporting group title	Apremilast
Reporting group description:	
Participants received apremilast 30 mg PO BID plus 2-1ml placebo SC saline injections QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase	
Reporting group title	Etanercept
Reporting group description:	
Participants received etanercept 50 mg by SC injection QW plus placebo tablets PO BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.

End points

End points reporting groups

Reporting group title	Placebo
Reporting group description: Participants received identically matching placebo tablets orally (PO), twice a day (BID) and 2-1 milliliter (ml) placebo subcutaneous (SC) saline injections once weekly (QW) during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.	
Reporting group title	Apremilast
Reporting group description: Participants received apremilast 30 mg PO BID plus 2-1ml placebo SC saline injections QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase	
Reporting group title	Etanercept
Reporting group description: Participants received etanercept 50 mg by SC injection QW plus placebo tablets PO BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase.	
Reporting group title	Placebo/Apremilast
Reporting group description: Participants who received placebo tablets PO BID and SC saline (placebo) injections (1mL x 2 injections SC) QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase week were switched to 30 mg Apremilast PO BID and remained on this dose through week 104.	
Reporting group title	Apremilast/Apremilast
Reporting group description: Participants who received apremilast 30 mg PO BID plus saline (placebo) injections (1mL x 2 injections SC) QW during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase continued on to receive apremilast 30mg PO BID through week 104.	
Reporting group title	Etanercept/Apremilast
Reporting group description: Participants who received etanercept 50 mg by SC injection QW plus placebo tablets PO BID during the 16-week randomized, double-blind, double-dummy, placebo-controlled phase, were switched at week 16 to apremilast 30 mg PO BID through week 104.	

Primary: Percentage of Subjects Who Achieved a 75% Improvement (Response) in the Psoriasis Area Severity Index (PASI-75) for the Comparison between Apremilast and Placebo at Week 16 from Baseline

End point title	Percentage of Subjects Who Achieved a 75% Improvement (Response) in the Psoriasis Area Severity Index (PASI-75) for the Comparison between Apremilast and Placebo at Week 16 from Baseline ^[1]
End point description: The PASI was a measure of psoriatic disease severity taking into account qualitative lesion characteristics (erythema, thickness, and scaling) and degree of skin surface area involvement on defined anatomical regions. PASI scores range from 0 to 72, with higher scores reflecting greater disease severity. Erythema, thickness, and scaling are scored on a scale of 0 (none) to 4 (very severe) on 4 anatomic regions of the body: head, trunk, upper limbs, and lower limbs. Degree of involvement on each of the 4 anatomic regions is scored on a scale of 0 (no involvement) to 6 (90% to 100% involvement). The PASI score was set to missing if any severity score or degree of involvement was missing. The modified intent to treat population = all participants who were randomized and received at least one dose of study drug and had both a baseline PASI and at least one post-treatment PASI evaluation. Missing data imputation: Last observation carried forward (LOCF).	
End point type	Primary
End point timeframe: Baseline to Week 16	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The primary endpoint compares placebo with apremilast only and is the reason only two arms are reported. The comparison of placebo and etanercept is a secondary endpoint. The study was not designed to compare apremilast with etanercept.

End point values	Placebo	Apremilast

Secondary: Percentage of subjects who achieved a Static Physician Global Assessment (sPGA) Score of clear (0) or almost clear (1) with at least 2 points reduction for comparison between Apremilast and Placebo and Etanercept and Placebo at Week 16

End point title	Percentage of subjects who achieved a Static Physician Global Assessment (sPGA) Score of clear (0) or almost clear (1) with at least 2 points reduction for comparison between Apremilast and Placebo and Etanercept and Placebo at Week 16
-----------------	---

End point description:

The sPGA is an assessment by the Investigator of the overall disease severity at the time of evaluation. The sPGA is a 5-point scale ranging from 0 (clear) to 4 (severe), incorporating an assessment of the severity of the three primary signs of the disease: erythema, scaling and plaque elevation. When making the assessment of overall severity, the Investigator should factor in areas that have already been cleared (ie, have scores of 0) and not just evaluate remaining lesions for severity, ie, the severity of each sign is averaged across all areas of involvement, including cleared lesions. In the event of different severities across disease signs, the sign that is the predominant feature of the disease should be used to help determine the sPGA score. mITT population consisted of all participants who were randomized and received at least one dose of study drug and had both a baseline PASI and at least one post-treatment PASI evaluation. Missing data imputation: LOCF.

Secondary: Change from baseline in the Mental Component Summary (MCS) score of the Medical Outcome Study Short Form 36-item (SF-36) Health Survey Version 2.0 in Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16

End point title	Change from baseline in the Mental Component Summary (MCS) score of the Medical Outcome Study Short Form 36-item (SF-36) Health Survey Version 2.0 in Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16
-----------------	---

End point description:

The SF-36 is a 36-item general health status instrument and consists of 8 scales: physical function (PF), role limitations-physical (RP), vitality (VT), general health perceptions (GH), bodily pain (BP), social function (SF), role limitations-emotional (RE), and mental health (MH). Scale scores range from 0 to 100, with higher scores indicating better health. Two overall summary scores were obtained – a Physical Component Summary score (PCS) and a Mental Component Summary score (MCS). Scores from the 8 scales, PCS and MCS were transformed to the norm-based scores using weights from U.S. general population, with higher scores indicating better health. For norm based scores, change from baseline were calculated for the 8 scales and the two summary scales, where change = visit value – baseline value. mITT population consisted of all participants who were randomized and received at least one dose of study drug and had both a baseline PASI and at least one post-treatment PASI evaluation.

Secondary: Percentage of Subjects who achieved a Lattice System Physician's Global Assessment (LS-PGA) score of clear (0) or almost clear at Week 16 in Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16

End point title	Percentage of Subjects who achieved a Lattice System Physician's Global Assessment (LS-PGA) score of clear (0) or almost clear at Week 16 in Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16
-----------------	--

End point description:

The Lattice System Physician's Global Assessment is a global assessment performed by the investigator of psoriasis severity. Integrating ranges of BSA involvement with assessments of overall plaque severity (using a 4 point scale, from none to marked for the signs of plaque elevation, erythema and scale), the LS-PGA produces an overall assessment of psoriasis severity on an 8-point scale, ranging from clear to very severe. To determine the final score, the lattice portion is governed by the BSA and among the plaque qualities, weights plaque elevation as most important, erythema next, and scale least. mITT population consisted of all participants who were randomized and received at least one dose of study drug and had both a baseline PASI and at least one post-treatment PASI evaluation. Missing data imputation: LOCF.

Secondary: Change from Baseline in Dermatology Life Quality Index (DLQI) Total Score In Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16

End point title	Change from Baseline in Dermatology Life Quality Index (DLQI) Total Score In Comparison Between Apremilast and Placebo and Etanercept and Placebo at Week 16
-----------------	--

End point description:

DLQI is a simple, compact, and practical questionnaire for use in a dermatology clinical setting to assess limitations related to the impact of skin disease. The instrument contains ten items dealing with the participant's skin. With the exception of Item Number 7, the participant responds on a four-point scale, ranging from "Very Much" (score 3) to "Not at All" or "Not relevant" (score 0). Item Number 7 is a multi-part item, the first part of which ascertains whether the participant's skin prevented them from working or studying (Yes or No, scores 3 or 0 respectively), and if "No," then the participant is asked how much of a problem the skin has been at work or study over the past week, with response alternatives being "A lot," "A little," or "Not at all" (scores 2, 1, or 0 respectively). The DLQI total score is derived by summing all item scores, which has a range of 0 to 30, with 30 corresponding to the worst quality of life, and 0 corresponding to the best. mITT population; LOCF

Secondary: Number of Subjects with Treatment Emergent Adverse Events (TEAEs) During the Placebo Controlled Phase

End point title	Number of Subjects with Treatment Emergent Adverse Events (TEAEs) During the Placebo Controlled Phase
-----------------	---

End point description:

A TEAE is an AE with a start date on or after the date of the first dose of study drug and no later than 28 days after the last dose of study drug for subjects who discontinued early. An AE is any noxious, unintended, or untoward medical occurrence that may appear or worsen during the study. It may be a new intercurrent illness, a worsening concomitant illness, an injury, or any concomitant impairment of the subjects health, including laboratory test values, regardless of etiology. Any worsening (ie, clinically

significant adverse change in frequency or intensity of a preexisting condition) should be considered an AE. A serious AE (SAE) is any untoward AE that is fatal, life-threatening, results in persistent or significant disability or incapacity, requires or prolongs existing in-patient hospitalization, is a congenital anomaly/birth defect, or is a condition that may jeopardize or may require intervention to prevent one of the outcomes above.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are reported for the 16-week placebo-controlled period and up to week 104 during the apremilast exposure period for all participants who were randomized or switched to apremilast at any time during the course of the study.

Adverse event reporting additional description:

The mean duration of exposure was 14.90 weeks, 15.13 weeks, and 15.87 weeks for participants randomized to the placebo, apremilast 30 BID, and etanercept 50 mg every week treatment groups, respectively during the placebo controlled phase. The mean duration of exposure to apremilast 30 mg BID during the apremilast exposure period was 69.13 weeks.
