

Clinical trial results:

Immunogenicity and Safety Study of a Hexavalent DTaP-IPV-Hep B-PRP-T Combined Vaccine or Infanrix hexa™ Concomitantly Administered With 13-Valent Pneumococcal Conjugate Vaccine (PCV13) at 3, 5, 11 to 12 Months of Age in Healthy Infants in Europe.

Summary

EudraCT number	2012-001054-26
Trial protocol	SE FI
Global end of trial date	10 January 2014

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001201-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 August 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 January 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the non-inferiority of the Hexaxim vaccine to the licensed Infanrix hexa vaccine, both co-administered with Prevenar 13, in terms of seroprotection or vaccine response rates to all antigens contained in both investigational and control vaccines, 1 month after a 2+1-dose schedule.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Prevenar 13 was co-administered with both the investigational and control vaccines in order to document the concomitant administration with the investigational vaccine as compared to its co-administration with the licensed vaccine.

Evidence for comparator:

Infanrix hexa was chosen as the comparator vaccine as it was the only licensed hexavalent vaccine in Europe at the time of study start and was licensed but not used in Sweden and Finland.

Actual start date of recruitment	01 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 43
Country: Number of subjects enrolled	Finland: 511
Worldwide total number of subjects	554
EEA total number of subjects	554

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	554

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Study subjects were enrolled from 01 November 2012 to 12 March 2014 in 11 centers in Finland and 2 centers in Sweden.

Pre-assignment

Screening details:

A total of 546 subjects who met all inclusion criteria and none of the exclusion criteria were enrolled and vaccinated.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Blinding implementation details:

Neither the Investigator, the subject's parent(s)/legally representative(s), nor the Sponsor knew the vaccine administered. The product preparation and administration, and the assessment of safety were performed by 2 different individuals in separate rooms. The Investigator or delegate included subjects and evaluated the immediate safety post- vaccination. The nurse/vaccinator prepared and administered the vaccine in a separate room and had sole access to the product accountability forms.

Arms

Are arms mutually exclusive?	Yes
Arm title	DTaP-IPV-HB-Hib+Prevenar 13

Arm description:

Subjects who received 3 doses of DTaP-IPV-HB-Hib vaccine co-administered with Prevenar 13 at 3, 5, and 11 to 12 months of age.

Arm type	Experimental
Investigational medicinal product name	Hexaxim
Investigational medicinal product code	DTaP-IPV-HepB-PRP-T
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular injection into the anterolateral area of the right thigh, 3 doses at 3, 5, and 11 to 12 months of age.

Arm title	Infanrix hexa+Prevenar 13
------------------	---------------------------

Arm description:

Subjects who received 3 doses of Infanrix hexa vaccine co-administered with Prevenar 13 at 3, 5, and 11 to 12 months of age.

Arm type	Active comparator
Investigational medicinal product name	Infanrix hexa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for suspension for injection, Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL dose, intramuscular injection into the anterolateral area of the right thigh, 3 doses at 3, 5, and 11 to 12 months of age.

Number of subjects in period 1^[1]	DTaP-IPV-HB-Hib+Prevenar 13	Infanrix hexa+Prevenar 13
Started	271	275
Completed	266	267
Not completed	5	8
Consent withdrawn by subject	4	6
Adverse event, non-fatal	1	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects enrolled at baseline (N=546) represents subjects who were vaccinated at V01 and included in the Full Analysis Set.

Primary: Percentage of Subjects with Seroprotection or Vaccine Response Following Vaccinations with Hexavalent DTaP-IPV-Hep B-PRP-T Combined Vaccine or Infanrix hexa™ Concomitantly Administered With 13-Valent Pneumococcal Conjugate Vaccine (PCV13)

End point title	Percentage of Subjects with Seroprotection or Vaccine Response Following Vaccinations with Hexavalent DTaP-IPV-Hep B-PRP-T Combined Vaccine or Infanrix hexa™ Concomitantly Administered With 13-Valent Pneumococcal Conjugate Vaccine (PCV13) ^[1]
-----------------	---

End point description:

Anti-Diphtheria antibodies (Ab) were measured by a diphtheria micrometabolic inhibition test; Anti-Tetanus, Anti-Pertussis toxoid (PT), and Anti-Filamentous Hemagglutinin (FHA) Ab were measured by enzyme-linked immunosorbent assay; Anti-Polio types were measured by neutralization assay; Anti-hepatitis B (Hep B) Ab were measured by the VITROS ECi/ECiQ Immunodiagnostic System; and Anti-polyribosyl ribitol phosphate (PRP) Ab were measured using a Farr-type radioimmunoassay. Seroprotection was defined as Anti-Diphtheria and anti-Tetanus Ab concentrations ≥ 0.1 international units (IU)/mL, Anti-poliovirus 1, 2, and 3 Ab titers ≥ 8 (1/dil), Anti-Hep B Ab concentrations ≥ 10 mIU/mL, and Anti-PRP Ab concentrations ≥ 1 μ g/mL. Vaccine response for PT and FHA was defined as Post-Dose 3 Ab concentrations $\geq 4 \times$ Lower Level Of Quantitation (LLOQ), if pre-Dose 1 Ab concentrations $< 4 \times$ LLOQ; Post-Dose 3 Ab concentrations \geq pre-Dose 1 Ab concentrations, if pre-Dose 1 Ab concentrations $\geq 4 \times$ LLOQ.

End point type	Primary
----------------	---------

End point timeframe:

1 month post-Dose 3

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analyses were performed based on the study groups and the study vaccine administered for this outcome.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days after each vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 November 2012	The scale for assessment of Extensive Limb Swelling was added and the protocol was corrected with the new Sponsor's Responsible Medical Officer information.
14 June 2013	The Global Clinical Immunology (GCI) re-implemented the micrometabolic inhibition test using pH indicator for development (MIT-pH) assay for the DTaP-IPV-HB-Hib studies and discontinued the micrometabolic inhibition test using cell survival assessed by crystal violet staining (MIT-CV) method.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
