

## Clinical trial results:

### Immunogenicity and Safety Study of a Hexavalent DTaP-IPV-HB-Hib Combined Vaccine in a 3-dose Primary Series in Healthy Infants in Europe

#### Summary

EudraCT number	2012-001055-39
Trial protocol	DE CZ ES
Global end of trial date	27 November 2014

#### Results information

Result version number	v1 (current)
This version publication date	21 April 2016
First version publication date	21 April 2016

#### Trial information

##### Trial identification

Sponsor protocol code	A3L39
-----------------------	-------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	U1111-1122-2329

Notes:

#### Sponsors

Sponsor organisation name	Sanofi Pasteur SA
Sponsor organisation address	2, avenue Pont Pasteur, Lyon Cedex 07, France, F-69367
Public contact	Director, Clinical Development, Sanofi Pasteur SA, 33 (0)4 37 37 58 43, emmanuel.feroldi@sanofipasteur.com
Scientific contact	Director, Clinical Development, Sanofi Pasteur SA, 33 (0)4 37 37 58 43, emmanuel.feroldi@sanofipasteur.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000120-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 August 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 November 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Groups 1 and 2 only

To demonstrate the non-inferiority of the DTaP-IPV-HB-Hib vaccine to the control Infanrix hexa vaccine, both co-administered with Prevenar 13, in terms of seroprotection or vaccine response rates to PT, FHA, Hep B, and PRP antigens, 1 month after a 3-dose primary series.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were randomized and vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	21 January 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 265
Country: Number of subjects enrolled	Czech Republic: 276
Country: Number of subjects enrolled	Germany: 253
Worldwide total number of subjects	794
EEA total number of subjects	794

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	794

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study subjects were enrolled from 21 January 2014 to 18 August 2014 at 25 clinic centers in Czech Republic, 12 in Spain, and 15 in Germany.

### Pre-assignment

Screening details:

A total of 794 subjects who met all of the inclusion and none of the exclusion criteria were randomized and vaccinated in this study.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

This was an observer-blind study. The Investigator, subjects and parents, and Sponsor were blinded to vaccine treatment. To maintain the blind, the product preparation and administration, and the assessment of safety were performed by 2 different individuals in separate rooms. In the event of an emergency (i.e., serious adverse event) the code could be broken by the Investigator as explained in the code-breaking procedures outlined in the Operating Guidelines.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Group 1

Arm description:

Subjects received 3 doses of DTaP-IPV-HB-Hib vaccine coadministered with Prevenar 13 and RotaTeq, 1 injection each at 2, 3, and 4 months of age at the study sites in Germany and Czech Republic.

Arm type	Experimental
Investigational medicinal product name	DTaP-IPV-HB-Hib combined vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular injection into the anterolateral area of the right thigh, 1 injection each at 2, 3, 4 months of age co-administered with Prevenar 13 and RotaTeq.

Investigational medicinal product name	Prevenar 13
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into anterolateral area of the left thigh, 1 injection each at 2, 3, and 4 months co-administered with DTaP-IPV-HB-Hib and RotaTeq.

Investigational medicinal product name	RotaTeq
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

0.2 mL, oral route, 1 injection each at 2, 3, and 4 months co-administered with DTaP-IPV-HB-Hib and

<b>Arm title</b>	Group 2
Arm description:	
Subjects received 3 doses of Infanrix hexa co-administered with Prevenar 13 and RotaTeq, 1 injection each at 2, 3, and 4 months of age at the study sites in Germany and Czech Republic.	
Arm type	Active comparator
Investigational medicinal product name	Infanrix hexa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and suspension for suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular into the anterolateral area of the right thigh, 1 injection each at 2, 3, and 4 months co-administered with Prevenar 13 and RotaTeq.	
Investigational medicinal product name	Prevenar 13
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular into anterolateral area of the left thigh, 1 injection each at 2, 3, and 4 months co-administered with Infanrix hexa and RotaTeq.	
Investigational medicinal product name	RotaTeq
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
0.2 mL, oral route, 1 injection each at 2, 3, and 4 months co-administered with Infanrix hexa and Prevenar 13.	
<b>Arm title</b>	Group 3
Arm description:	
Subjects from the sites in Spain, they received 2 doses of DTaP-IPV-HB-Hib vaccine 1 injection each at 2 and 6 months of age and 1 dose of Pentavac at 4 months. DTaP-IPV-HB-Hib vaccine and Pentavac were co-administered with Prevenar 13 at 2 and 4 months of age and at 6 months (depending on local use and at the Investigator's discretion), NeisVac-C at 2 months, and RotaTeq at 2, 4, and 6 months of age + Hep B vaccine at birth.	
Arm type	Experimental
Investigational medicinal product name	DTaP-IPV-HB-Hib combined vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular injection into the anterolateral area of the right thigh, 1 injection each at 2 and 6 months of age co-administered with Prevenar 13 and Pentavac.	
Investigational medicinal product name	Prevenar 13
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular into anterolateral area of the left thigh, 1 injection each at 2 and 4 months co-administered with DTaP-IPV-HB-Hib and Pentavac.	
Investigational medicinal product name	DTaP-IPV//PRP-T combined vaccine (Pentavac)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intramuscular use
Dosage and administration details:	
0.5 mL, intramuscular into the anterolateral area of the right thigh, 1 injection each at 2 and 4 months co-administered with DTaP-IPV-HB-Hib vaccine and Prevenar 13.	
Investigational medicinal product name	NeisVac-C
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection in pre-filled syringe
Routes of administration	Intramuscular use

## End points

### End points reporting groups

Reporting group title	Group 1
Reporting group description: Subjects received 3 doses of DTaP-IPV-HB-Hib vaccine coadministered with Prevenar 13 and RotaTeq, 1 injection each at 2, 3, and 4 months of age at the study sites in Germany and Czech Republic.	
Reporting group title	Group 2
Reporting group description: Subjects received 3 doses of Infanrix hexa co-administered with Prevenar 13 and RotaTeq, 1 injection each at 2, 3, and 4 months of age at the study sites in Germany and Czech Republic.	
Reporting group title	Group 3
Reporting group description: Subjects from the sites in Spain, they received 2 doses of DTaP-IPV-HB-Hib vaccine 1 injection each at 2 and 6 months of age and 1 dose of Pentavac at 4 months. DTaP-IPV-HB-Hib vaccine and Pentavac were co-administered with Prevenar 13 at 2 and 4 months of age and at 6 months (depending on local use and at the Investigator's discretion), NeisVac-C at 2 months, and RotaTeq at 2, 4, and 6 months of age + Hep B vaccine at birth.	

### Primary: Seroprotection or Response to Pertussis toxoid, Filamentous hemagglutinin, Hepatitis B and Hib Polysaccharide Antigens After Vaccinations with Hexavalent DTaP-IPV-Hep B-PRP-T Combined Vaccine or Infanrix hexa™ Concomitantly Administered With Prevenar®13

End point title	Seroprotection or Response to Pertussis toxoid, Filamentous hemagglutinin, Hepatitis B and Hib Polysaccharide Antigens After Vaccinations with Hexavalent DTaP-IPV-Hep B-PRP-T Combined Vaccine or Infanrix hexa™ Concomitantly Administered With Prevenar®13 <sup>[1]</sup>
End point description: End point was assessed in Groups 1 and 2. Anti-Pertussis toxoid (PT) and anti-Filamentous hemagglutinin (FHA) antibodies were measured by enzyme-linked immunosorbent assay (ELISA). Anti-Hepatitis B (Hep B) antibodies were measured by the commercially available VITROS ECi/ECiQ Immunodiagnostic System using chemiluminescence detection technology. Anti-Hib polysaccharide (PRP) concentrations were measured using a Farr-type radioimmunoassay (RIA). Seroprotection was defined as anti-Hep B antibody concentrations $\geq 10$ mIU/mL and anti-PRP antibody concentrations $\geq 0.15$ µg/mL. Vaccine response for PT and FHA were defined as follows: Post-dose 3 antibody concentrations $\geq 4X$ lower limit of quantitation (LLOQ), if Pre-dose 1 antibody concentrations $< 4X$ LLOQ; Post-dose 3 antibody concentrations $\geq$ Pre-dose 1 antibody concentrations, if Pre-dose 1 antibody concentrations $\geq 4X$ LLOQ.	
End point type	Primary
End point timeframe: 1 month post-dose 3	

#### Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Descriptive analyses were performed based on the study groups and the study vaccine administered for this outcome.

End point values	Group 1	Group 2

## Statistical analyses

<b>Statistical analysis title</b>	Non-inferiority (Group 1 - Group 2); Anti-PT
Statistical analysis description:	
Non-inferiority analysis of seroprotection, vaccine response rates of DTaP-IPV-HB-Hib vs Infanrix hexa.	
Comparison groups	Group 1 v Group 2
Number of subjects included in analysis	476
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[2]</sup>
Parameter estimate	Vaccine response (Group 1 - Group 2)
Point estimate	0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.51
upper limit	3.44

Notes:

[2] - The 95% confidence interval (CI) was calculated based on the Wilson score method without continuity correction. If the lower bound of the 95% CI was greater than -  $\delta$  then the null hypothesis H0 was rejected and non-inferiority would be concluded. In this analysis, DTaP-IPV-HB-Hib vaccine was non-inferior to Infanrix hexa vaccine.

<b>Statistical analysis title</b>	Non-inferiority (Group 1 - Group 2); Anti-FHA
Statistical analysis description:	
Non-inferiority analysis of seroprotection, vaccine response rates of DTaP-IPV-HB-Hib vs Infanrix hexa.	
Comparison groups	Group 1 v Group 2
Number of subjects included in analysis	476
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[3]</sup>
Parameter estimate	Vaccine response (Group 1 - Group 2)
Point estimate	4.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.23
upper limit	8.12

Notes:

[3] - The 95% confidence interval (CI) was calculated based on the Wilson score method without continuity correction. If the lower bound of the 95% CI was greater than -  $\delta$  then the null hypothesis H0 was rejected and non-inferiority would be concluded. In this analysis, DTaP-IPV-HB-Hib vaccine was non-inferior to Infanrix hexa vaccine.

End point description:

Anti-Tetanus antibodies were measured by enzyme-linked immunosorbent assay. Anti-Diphtheria antibodies were measured by a toxin neutralization test. Anti-Hepatitis B (Hep B) antibodies were measured by VITROS ECi/ECiQ Immunodiagnostic System. Anti-Poliovirus types 1, 2, and 3 were measured by neutralization assay. Anti-Hib polysaccharide (PRP) concentrations were measured using a Farr-type radioimmunoassay. Anti-Diphtheria and anti-Tetanus titers were assessed  $\geq 0.01$  IU/mL,  $\geq 0.1$  IU/mL, and  $\geq 1.0$  IU/mL. Vaccine response was anti-PT or anti-FHA concentrations in EU/mL  $\geq 4 \times$  LLOQ if pre-vaccination concentration  $< 4 \times$  LLOQ or  $\geq$  pre-vaccination concentration if pre-vaccination concentrations  $\geq 4 \times$  LLOQ. Anti-Polio 1, 2, and 3 titers were assessed  $\geq 8$  (1/dil). Anti-Hep B titers were assessed  $\geq 10$  mIU/mL. Anti-PRP titers were assessed  $\geq 0.15$   $\mu$ g/mL. Pre-dose 1 values were not available for Anti-Diphtheria, Anti-Tetanus, Anti-Polio 1, 2, 3, Anti-Hep B, and Anti-PRP for Groups 1 and 2.

Anti-rotavirus IgA antibodies in human serum was measured by enzyme-linked immunosorbent assay (ELISA). The pneumococcal capsular polysaccharide (PS) IgG ELISA was used to quantitate the amount of anti-streptococcus pneumonia PS (serotypes 1, 3, 4, 5, 6A, 6B, 7F, 9V, 14, 18C, 19A, 19F, and 23F) antibodies in human serum. Immune responses were defined as Anti-rotavirus IgA  $\geq$  20 U/mL and for all pneumococcal serotypes  $\geq$  0.35 µg/mL.

End point type	Secondary
End point timeframe:	
Pre-dose 1 (Anti-RV IgA) and post-dose 3 (for Anti-RV IgA and all pneumococcal serotypes)	

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.  
Justification: Descriptive analyses were performed based on the study groups and the study vaccine administered for this outcome.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse event data were collected from Day 0 up to Day 30 post-each vaccination.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	12
--------------------	----

### Reporting groups

Reporting group title	Group 1
-----------------------	---------

Reporting group description:

Subjects received 3 doses of DTaP-IPV-HB-Hib vaccine coadministered with Prevenar 13 and RotaTeg at 2, 3, and 4 months of age.

Reporting group title	Group 2
-----------------------	---------

Reporting group description:

Subjects received 3 doses of Infanrix hexa co-administered with Prevenar 13 and RotaTeg at 2, 3, and 4 months of age.

Reporting group title	Group 3
-----------------------	---------

Reporting group description:

Subjects received 2 doses of DTaP-IPV-HB-Hib vaccine at 2 and 6 months of age and 1 dose of Pentavac at 4 months. DTaP-IPV-HB-Hib vaccine and Pentavac were co-administered with Prevenar 13 at 2 and 4 months of age and at 6 months (depending on local use and at the Investigator's discretion), NeisVac-C at 2 months, and RotaTeg at 2, 4, and 6 months of age.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2013	Administration of a third dose of pneumococcal conjugate vaccine (Prevenar 13) was added as optional based on local use and at the Investigator's discretion, immune response analysis was also to be assessed in Germany and Czech Republic, and the reference to the booster study was deleted (no diary cards were provided to subjects/parents at the end of the study in Spain).

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
