Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 February 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 January 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the reduction of low-density lipoprotein cholesterol (LDL-C) by alirocumab as add-on therapy to stable maximally tolerated daily statin therapy with or without other lipid modifying therapy (LMT) in comparison with placebo after 24 weeks of treatment in subjects with heterozygous familial hypercholesterolemia (heFH) and LDL-C higher than or equal to 160 mg/dL (4.14 mmol/L).

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

All subjects received statins (simvastatin, atorvastatin or rosuvastatin) at maximally tolerated dose. Background statin therapy (including dose) was not to be changed at least 4 weeks prior to the screening visit and throughout the whole study duration barring exceptional circumstances.

Evidence for comparator: -

Actual start date of recruitment	06 June 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Russian Federation: 29
Country: Number of subjects enrolled	South Africa: 34
Country: Number of subjects enrolled	United States: 27
Worldwide total number of subjects	107
EEA total number of subjects	11

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	93
From 65 to 84 years	14
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 33 centers in 5 countries. A total of 206 subjects were screened between June 2012 and May 2013, 99 of whom were screen failures. Screen failures were mainly due to exclusion criteria met.

Pre-assignment

Screening details:

Randomization was stratified according to prior history of myocardial infarction (MI) or ischemic stroke, and intensity of statin treatment. Assignment to treatment arms was done centrally using an Interactive Voice/Web Response System in a 1:2 (placebo:alirocumab) ratio after confirmation of selection criteria. 107 subjects were randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

Alirocumab and placebo for alicumab were provided in identically matched auto-injectors and packaged identically.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo for alicumab every two weeks (Q2W) on top of stable maximally tolerated daily statin therapy with or without other LMT for 78 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo (for alicumab)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 mL subcutaneous injection in the abdomen, thigh, or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

Arm title	Alirocumab 150 mg Q2W
------------------	-----------------------

Arm description:

Alirocumab 150 mg Q2W on top of stable maximally tolerated daily statin therapy with or without other LMT for 78 weeks.

Arm type	Experimental
Investigational medicinal product name	Alirocumab
Investigational medicinal product code	SAR236553, REGN727
Other name	Praluent
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

1 mL subcutaneous injection in the abdomen, thigh, or outer area of the upper arm by self-injection or by another designated person using the auto-injector.

Number of subjects in period 1	Placebo	Alirocumab 150 mg Q2W
Started	35	72

Secondary: Percentage of Very High Cardiovascular (CV) Risk Subjects Achieving Calculated LDL-C < 70 mg/dL (<1.81 mmol/L) or High CV Risk Subjects Achieving Calculated LDL-C < 100 mg/dL (<2.59 mmol/L) at Week 24 - ITT Analysis

End point title	Percentage of Very High Cardiovascular (CV) Risk Subjects Achieving Calculated LDL-C < 70 mg/dL (<1.81 mmol/L) or High CV Risk Subjects Achieving Calculated LDL-C < 100 mg/dL (<2.59 mmol/L) at Week 24 - ITT Analysis
-----------------	---

End point description:

Very high CV risk subjects: heFH subjects with coronary heart disease (CHD) or CHD risk equivalents. High CV risk subjects: heFH subjects without CHD or CHD risk equivalents. CHD risk equivalent: peripheral arterial disease, ischemic stroke, moderate chronic kidney disease, or diabetes mellitus (DM) plus 2 or more additional risk factors. Adjusted percentages at Week 24 were obtained from a multiple imputation approach model for handling of missing data. All available post-baseline data from Week 4 to Week 52 regardless of status on- or off-treatment were included in the imputation model. ITT population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AEs) were collected from signature of the informed consent form up to the final visit in the study regardless of seriousness or relationship to investigational medicinal product (IMP).

Adverse event reporting additional description:

Reported adverse events are treatment-emergent that is AEs that developed/worsened during the 'treatment-emergent period' (from the first double-blind IMP injection up to the day of the last injection + 70 days or up to first injection in the extension study, whichever came first).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 February 2013	<p>Following changes were made:</p> <ul style="list-style-type: none">•Reporting of AEs was changed: neurological and ophthalmologic events were added in the list of Adverse Events of Special Interest (AESIs); pregnancy of male subject's partner as an AESI with immediate notification to comply with an update in the company procedure; safety reporting timelines were changed from "within 1 working day" to "within 24 hours" for serious adverse events and AESI with immediate notification;•Screening period duration and the window for the training visit was changed;•Red blood cell distribution width (RDW) and reticulocyte count were added as hematology laboratory parameters;•Clarification was provided regarding the type of CV events to be submitted to the Clinical Events Committee (CEC) for adjudication;•Added a clarification on how to handle subjects randomized and not treated with the IMP;•Added information on the collection of family medical history;•Clarified the wording related to the possibility for a heFH subject having completed the double-blind treatment period to enter an open-label extension (OLE).
26 February 2014	<ul style="list-style-type: none">•Modified the primary efficacy analysis population and the statistical analysis methodology: the primary efficacy analysis population was modified to ITT population for primary and secondary efficacy endpoints, which included assessments both on study treatment and off study treatment through the analysis period; primary and key secondary endpoints were also to be analyzed in the mITT population to assess the drug effect during the study treatment period (on-treatment approach);•Updated language on CV events to be reported to the CEC for adjudication and included a clarification on CV events;•Updated language on collection of partner pregnancy as per other protocol in the ODYSSEY Phase 3 program;•Categorization of AEs (updated language on how to record injection site reactions that were not related to IMP).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Manual reclassification was done by the Sponsor for the "other reasons" of non-completion of study as specified in the electronic case report form (eCRF).

Notes:
