

Clinical trial results:

An international, open label, randomised controlled trial comparing rituximab with azathioprine as maintenance therapy in relapsing ANCA-associated vasculitis.

Summary

EudraCT number	2012-001102-14
Trial protocol	GB CZ ES SE IT IE
Global end of trial date	29 November 2019

Results information

Result version number	v1 (current)
This version publication date	09 July 2021
First version publication date	09 July 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 December 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 November 2019
Global end of trial reached?	Yes
Global end of trial date	29 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the superiority of rituximab against azathioprine in the prevention of disease flare in ANCA-associated vasculitis patients with relapsing disease.

Protection of trial subjects:

Trial subjects were carefully monitored for the duration of the study, with frequent visits and follow-up. Treatment administration was in line with their usual standard of care and no additional distress was expected from participation in the trial.

Background therapy: -

Evidence for comparator:

Rationale for the use of rituximab in AAV: B cells play a key role in the pathogenesis of AAV. Not only are they the precursors of ANCA secreting plasma cells, but they also act as antigen presenting cells for autoreactive T cells, providing co-stimulatory support and initiating T cell activation, as well as producing pro-inflammatory cytokines, such as IL-6 and TNF α . Specifically depleting B cells with targeted biological agents, such as rituximab, is therefore a promising approach to the treatment of AAV.

Actual start date of recruitment	19 April 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 11
Country: Number of subjects enrolled	Canada: 28
Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	Japan: 5
Country: Number of subjects enrolled	Sweden: 5
Country: Number of subjects enrolled	United Kingdom: 86
Country: Number of subjects enrolled	United States: 52
Worldwide total number of subjects	188
EEA total number of subjects	6

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	118
From 65 to 84 years	69
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

RITAZAREM is a joint venture of the European Vasculitis Study Group (EUVAS) and the Vasculitis Clinical Research Consortium (VCRC). RITAZAREM was conducted in multiple centres internationally including Europe, North America and Australia/New Zealand and Japan.

Pre-assignment

Screening details:

Patients were evaluated by their local trial investigators to ensure they met all the inclusion criteria and none of the exclusion criteria. The screening visit required confirmation of the diagnosis of AAV (ANCA positivity, current or historical and pertinent histology results) and documentation of organ manifestations of active AAV.

Period 1

Period 1 title	Induction Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This is an open label study. A non-blinded, open label study was been chosen for reasons of simplicity and practicality in view of RITAZAREM being an international multi-centre trial. Previous EUVAS studies with similar end-points have also been unblinded yet have led to robust and reproducible conclusions.

Arms

Arm title	Rituximab induction therapy
-----------	-----------------------------

Arm description:

Patients were recruited at the time of relapse. All received rituximab 375 mg/m²/week x 4 and glucocorticoids to achieve remission. Those patients that achieved disease control (BVAS/WG \leq 1 and daily prednisone dose \leq 10 mg) by month 4 were eligible for the subsequent phase of the trial (phase 2) where they were randomised to either rituximab or control remission maintenance therapy.

Arm type	Induction therapy
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	MabThera, Rituxan
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients were recruited at the time of relapse. All received rituximab 375 mg/m²/week x 4 doses and glucocorticoids.

The first dose of rituximab should have been given within 14 days of enrolment into the trial.

All induction doses of rituximab should have been completed by week 6.

First infusion: the recommended initial infusion rate for rituximab is 50 mg/h; subsequently, the rate can be escalated in 50 mg/h increments every 30 minutes to a maximum of 400 mg/h.

Subsequent infusions: subsequent infusions of rituximab can be started at a rate of 100 mg/h and increased by 100 mg/h increments every 30 minutes to a maximum of 400 mg/h.

Pre-medication with 100 mg IV methylprednisolone will be administered prior the first infusion to minimise infusion reactions.

Sites will follow local pre-medication practice for infusions 2, 3, and 4. 100 mg IV methylprednisolone will be administered prior to each maintenance dose.

Number of subjects in period 1	Rituximab induction therapy
Started	188
Completed	170
Not completed	18
Adverse event, serious fatal	4
Consent withdrawn by subject	3
Physician decision	2
Missed randomisation window	1
Lost to follow-up	1
Not eligible for induction therapy	1
Not in remission at month 4	6

Period 2

Period 2 title	Maintenance Phase
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This is an open label study. A non-blinded, open label study has been chosen for reasons of simplicity and practicality in view of RITAZAREM being an international multi-centre trial. Previous EUVAS studies with similar end-points have also been unblinded yet have led to robust and reproducible conclusions.

Arms

Are arms mutually exclusive?	Yes
Arm title	Rituximab

Arm description:

Rituximab maintenance therapy

Arm type	Experimental
Investigational medicinal product name	Rituximab
Investigational medicinal product code	
Other name	MabThera, Rituxan
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Rituximab 1000 mg x 1 dose at months 4, 8, 12, 16 and 20 and glucocorticoids.

Arm title	Azathioprine
Arm description:	
Control maintenance therapy	
Arm type	Active comparator

Investigational medicinal product name	Azathioprine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients randomised to the control arm will receive oral azathioprine, to be taken daily. The maximum daily dose allowed is 200mg.

The maximum treatment period is 27 months, with tapering at month 24 as described below.

The target dose is 2mg/kg. The maximum daily dose is 200mg.

This should be continued until month 24. The dose should then be reduced by 50% and azathioprine completely withdrawn at month 27.

The dose should be rounded down to the nearest 25mg. The dose may vary on alternate days e.g. 100mg.

Methotrexate or mycophenolate mofetil were permitted for those individuals intolerant of azathioprine. Methotrexate 25 mg/week will be substituted for patients with GFR > 50 ml/min and intolerant of azathioprine even at a reduced dose of 1 mg/kg/day. Mycophenolate mofetil 2 g/day will be substituted for patients intolerant of azathioprine and with GFR < 50 ml/min, and glucocorticoids. Intolerance is defined as the occurrence of an adverse event.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: The protocol comprises an induction phase (period 1) and a maintenance phase (period 2). During the induction period, all patients receive the same treatment to bring the disease under remission, only the patients who achieve remission by month 4 are entered in the randomised second phase of the trial, which aims to assess the efficacy of rituximab compared to azathioprine in the prevention of disease relapse in AAV patients with relapsing disease.

Number of subjects in period 2^[2]	Rituximab	Azathioprine
Started	85	85
Month 24	78	78
Completed	71	70
Not completed	14	15
Adverse event, serious fatal	3	1
Consent withdrawn by subject	5	5
Physician decision	-	4
Adverse event, non-fatal	2	2
Lost to follow-up	4	3

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The total number of patients enrolled in the trial comprises all patients enrolled in the induction phase of the trial (phase 1) while only those who achieved disease remission by month 4 are entered in the randomised maintenance phase of the trial (phase 2). Baseline is taken to be at the point of randomisation (month 4) and encompass only those patients who achieve disease remission by month 4.

End points

End points reporting groups

Reporting group title	Rituximab induction therapy
-----------------------	-----------------------------

Reporting group description:

Patients were recruited at the time of relapse. All received rituximab 375 mg/m²/week x 4 and glucocorticoids to achieve remission. Those patients that achieved disease control (BVAS/WG ≤ 1 and daily prednisone dose ≤ 10 mg) by month 4 were eligible for the subsequent phase of the trial (phase 2) where they were randomised to either rituximab or control remission maintenance therapy.

Reporting group title	Rituximab
-----------------------	-----------

Reporting group description:

Rituximab maintenance therapy

Reporting group title	Azathioprine
-----------------------	--------------

Reporting group description:

Control maintenance therapy

Subject analysis set title	Safety
----------------------------	--------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

The safety population comprises all consented subjects enrolled in the trial, regardless of whether they achieved remission and were randomised at month 4. The treatment group will be analysed as randomised (rituximab or azathioprine), patients who were enrolled but not randomised will be classified as belonging to the induction group (induction).

Subject analysis set title	Maintenance compliant
----------------------------	-----------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

This per-protocol populations includes all randomised patients who have not deviated from protocolised treatment during the maintenance phase of the trial (from randomisation to month 24). Patients who withdraw from trial or from protocolised treatment will be assessed for compliance up to the point of their withdrawal.

Subject analysis set title	Follow-up compliant
----------------------------	---------------------

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

This per-protocol populations includes all randomised patients who have not deviated from protocolised treatment during the follow-up (from randomisation to end of trial). It is assumed that maintenance compliance is necessary for follow-up compliance. Patients who withdraw from trial or from protocolised treatment will be assessed for compliance up to the point of their withdrawal.

Primary: First Major or Minor Relapse

End point title	First Major or Minor Relapse
-----------------	------------------------------

End point description:

The primary efficacy outcome measure of the trial is relapse-free survival, where a relapse is either major or minor. The primary analysis is a Cox regression model adjusted for the stratification factors (ANCA type, relapse severity and prednisone induction regimen) for the difference in the distribution of relapse-free survival between the rituximab arm and the azathioprine (control) arm (two-sided at α -level of 5%). Assuming a proportional hazard holds, the hazard ratio together with the 95% confidence interval will be estimated using a Cox regression model adjusted for the stratification factors.

End point type	Primary
----------------	---------

End point timeframe:

Patients are followed up from a minimum of 36 months to a maximum of 48 months from enrolment (month 0). The primary endpoint is time to disease relapse (either minor or major relapse) from randomisation (month 4).

Parameter estimate	Hazard ratio (HR)
Point estimate	0.32
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.18
upper limit	0.58
Variability estimate	Standard error of the mean
Dispersion value	0.3

Statistical analysis title	Cox regression model (during treatment)
-----------------------------------	---

Statistical analysis description:

There will be a closed testing procedure, first the null hypothesis will be tested for a hazard ratio of 1 at all time points. If this is rejected at a 5% level then two further sub-hypothesis will be examined using time-varying covariates:

1. A hazard ratio of 1 up to 20 months post-randomisation (i.e. during treatment).
2. A hazard ratio of 1 after 20 months post-randomisation (i.e. post treatment).

Comparison groups	Rituximab v Azathioprine
-------------------	--------------------------

Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority ^[5]
P-value	= 0.008 ^[6]
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.29
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.11
upper limit	0.72
Variability estimate	Standard error of the mean
Dispersion value	0.47

Notes:

[5] - Following the closed testing procedure this analysis is carried out because the null hypothesis at all time points has been rejected at 5% level.

[6] - 1. A hazard ratio of 1 up to 20 months post-randomisation (i.e. during treatment).

Statistical analysis title	Copy of Cox regression model (post treatment)
-----------------------------------	---

Statistical analysis description:

There will be a closed testing procedure, first the null hypothesis will be tested for a hazard ratio of 1 at all time points. If this is rejected at a 5% level then two further sub-hypothesis will be examined using time-varying covariates:

1. A hazard ratio of 1 up to 20 months post-randomisation (i.e. during treatment).
2. A hazard ratio of 1 after 20 months post-randomisation (i.e. post treatment).

Comparison groups	Rituximab v Azathioprine
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority ^[7]
P-value	= 0.006 ^[8]
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.35
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.16
upper limit	0.74
Variability estimate	Standard error of the mean
Dispersion value	0.38

Notes:

[7] - Following the closed testing procedure this analysis is carried out because the previous null hypotheses at all time points and during treatment have been rejected at 5% level.

[8] - 2. A hazard ratio of 1 after 20 months post-randomisation (i.e. post treatment)

Other pre-specified: Remission at month 4

End point title	Remission at month 4
-----------------	----------------------

End point description:

This analysis will report on the four month open-label induction phase of the trial. It will address the efficacy of rituximab at re-inducing remission in patients with ANCA-associated vasculitis who have relapsed.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

The induction phase of the trial covers the first four month, from enrolment to month 4 inclusive. In this period all patients receive the same treatment (rituximab induction therapy) aimed at re-introducing remission.

End point values	Rituximab induction therapy			
Subject group type	Reporting group			
Number of subjects analysed	188			
Units: subjects				
In remission	171			
Not in remission	17			

Attachments (see zip file)	BVAS/WG - Disease Status/fig_4.02.5.png
-----------------------------------	---

Statistical analyses

No statistical analyses for this end point

Post-hoc: Major Relapse

End point title	Major Relapse
End point description:	
Time to a major relapse.	
End point type	Post-hoc

End point timeframe:

Patients are followed up from a minimum of 36 months to a maximum of 48 months from enrolment (month 0). The primary endpoint is time to disease relapse (either minor or major relapse) from randomisation (month 4).

End point values	Rituximab	Azathioprine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	85	85		
Units: subjects	11	26

-----------------------------------	---

Statistical analyses

Statistical analysis title	Cox regression model (all time points)
Statistical analysis description:	
A Cox regression model adjusted for the stratification factors (ANCA type, relapse severity and prednisone induction regimen) for the difference in the distribution of relapse-free survival between the rituximab arm and the azathioprine (control) arm (two-sided at α -level of 5%).	
Comparison groups	Rituximab v Azathioprine
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.005
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.36
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.18
upper limit	0.73
Variability estimate	Standard error of the mean
Dispersion value	0.36

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs recorded from enrollment until the end of the trial, thus events reported both during the induction and maintenance phase of the trial are reported. Reporting groups (Induction, Rituximab, Azathioprine) refer to the patient's assigned treatment group.

Adverse event reporting additional description:

In addition to all SAEs, the following selected adverse events are reported:

infections (all episodes requiring IV treatment or oral antibiotics);

AEs resulting in a change in dose of trial IMPs, or the addition of relevant concomitant medication, or the occurrence of a lab abnormality;
new malignancies.

Assessment type	Systematic

occurrences (all)	2	0	0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 February 2013	New PIS/consent v2.0
12 September 2013	<p>Protocol v 2.0; Consent - Minor assent form v1.1; PROMIS Questionnaire v2.0; PIS/consent v3.0</p> <p>1) Addition of patient related outcome questionnaire (PROMIS).</p> <p>2) Change to dosing advice for azathioprine in older patients. There is limited, objective evidence to support dose reduction of azathioprine with age. This is an historic practice, and would risk under-dosing our comparator group in the trial, possibly masking true treatment effects. The safety parameters and monitoring of azathioprine remain unchanged, and are robust to detect any problems early.</p> <p>3) Simplification of oral prednisolone dosing by conversion from mg/kg/day to mg/day with two weight divisions. The protocol was written to provide 2 prednisolone regimens (0.5mg/kg or 1.0mg/kg) for investigators to 'tailor' according to the severity of disease manifestations of the patient. The maximum daily dose was set at 60mg in week 0. However, due to the enrolment of two patients into the trial with larger than average Body Mass Index, it became necessary to redesign the regimens according to body weight to take account of this. This is also an important safety measure since adverse reactions to high prednisolone doses are well documented. Clarity has been added to the instruction paragraph for treatment of patient relapse during the trial since there was disagreement in the protocol between earlier instructions. This corrects and clarifies the wording.</p> <p>4) Change of inclusion/exclusion criteria</p> <p>5) Reference Safety Information change</p> <p>6) Rewording of the safety section of the protocol</p> <p>7) Alignment of follow up assessments for non-randomised patients</p> <p>8) Clarification of Hepatitis B screening to include new safety information</p>
08 May 2014	Addition of 4 new UK sites (applies to Dudley only the other sites did not set up)

17 September 2015	<p>Consent - Minor assent form v2.0; PIS parent/guardian v4.0; PIS/consent v4.0; Protocol v3.0;</p> <p>1) Clarification of the number of patients that will be randomised The protocol now reads that at least 160 patients will be randomised, to account for the fact that some patients may have been recruited, but not yet reached the 4 month randomisation point when the target of 160 patients is reached, thus allowing them to continue into the maintenance phase of the trial.</p> <p>2) Clarification of practicalities of trial A section has been added to the synopsis to make clear the three phases of the trial; further details on the minimisation criteria for randomisation have been added; clarification of the process of screening for pregnancy at the baseline visit has been added as well as additional information for investigators in the Republic of Ireland regarding contraception advice; it is now made clear that rituximab, azathioprine, methotrexate and mycophenolate mofetil are all IMPs for the purpose of this study; further detail regarding actions if IgG levels fall to below 3g/l have been added. Reducing dose of MTX and MMF by 50% at month 24 and then complete withdrawal at month 27, to align with azathioprine</p> <p>3) Re-wording of the primary objective It now reads "To assess the efficacy of rituximab compared to azathioprine in the prevention of disease flare in AAV patients with relapsing disease", rather than "To demonstrate the superiority of rituximab against azathioprine in the prevention of disease flare in AAV patients with relapsing disease"</p> <p>4) Safety reporting Kim Mynard has replaced Michelle Lewin as trial coordinator, and therefore the reporting contact for SAEs has been updated to reflect this. Section 13 has been re-worded and re-formatted to clarify the reference safety information for the trial and the definition of expected adverse reactions. In addition, several adverse events of interest will now be collected as part of the study.</p>
05 November 2015	Addition of 3 new UK sites (applies to Leicester and East Kent only) Stevenage did not set up
04 February 2016	Amendment to CTA
14 November 2016	Change in PI at Ipswich site
27 June 2017	<p>Change in RSI; Protocol v4.0</p> <p>1) Safety reporting Section 11 has been updated to include new reference safety information provided in the Azathioprine and Mycophenolate Mofetil SmPCs. Section 13 has been updated to include new reference safety information provided in the Azathioprine and Mycophenolate Mofetil SmPCs relating to adverse effects and pregnancy. Section 13.1.6 has been updated to clarify the definition of RSI for comparators (UK patients only).</p>
26 July 2017	New PIS/consent v5.0
02 August 2017	Change in PI at Ipswich site
19 February 2018	Change of secondary packaging for IMP PR1 (Rituximab) for this trial

04 September 2018	<p>Update to PIS v6.0 and Protocol v5.0 and update to RSI</p> <p>1) Safety reporting Sections 11 and 13 have been updated to include the monographs for azathioprine, methotrexate and mycophenolate mofetil as reference safety information for Canada. Sections 11 and 13 have been updated to remove text regarding monitoring assessments for azathioprine, methotrexate and mycophenolate mofetil. Section 11 has been updated to include new reference safety information provided in the Methotrexate SmPC.</p> <p>Several minor changes have also been made to the trial documentation.</p>
19 August 2019	Change in PI at Leicester site

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None.
