

Clinical trial results:

A Phase I Study of Ipilimumab (Anti-CTLA-4) in Children, Adolescents, and Young Adults with Treatment Refractory Cancer

Summary

EudraCT number	2012-001141-41
Trial protocol	Outside EU/EEA
Global end of trial date	13 April 2014

Results information

Result version number	v1 (current)
This version publication date	10 February 2017
First version publication date	10 February 2017

Trial information

Trial identification

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000117-PIP02-10, EMA-000117-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 April 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	13 April 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to determine the tolerance and toxicity profile of ipilimumab at a range of doses up to, but not exceeding, the highest dose tolerated in adults in subjects ≤ 21 years of age with untreatable, refractory or relapsed solid malignant tumors and to assess the pharmacokinetics (PK) of ipilimumab administered intravenously (IV) in subjects ≤ 21 years of age with solid tumors refractory to standard therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 September 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 33
Worldwide total number of subjects	33
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	13
Adolescents (12-17 years)	12
Adults (18-64 years)	8
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

33 subjects were enrolled at a total of 3 study sites. All enrolled subjects received at least one dose of Ipilimumab.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	1mg/kg Ipilimumab
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Ipilimumab
Investigational medicinal product code	
Other name	YervoyBMS-734016
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	In vitro use

Dosage and administration details:

Ipilimumab was administered IV over 90 minutes on Day 1 of each 21-day cycle for 4 cycles in the absence of dose-limiting toxicity (DLT) or disease progression. Subjects received no experimental drug therapy on Days 2 to 21 of cycles 1 through 4. From Cycle 5 onward (with Cycle 5 at Week 12), ipilimumab was administered approximately every 12 weeks (maintenance dosing).

Subjects who entered the maintenance phase and had confirmed PD during the maintenance treatment were eligible to receive re-induction therapy using ipilimumab at the assigned dose and schedule specified in the protocol (Day 1 of a 21-day cycle for 4 cycles). Patients who stopped maintenance treatment because of a CR and subsequently had confirmed PD were eligible to receive re-induction as well. Subjects with an initial PR or CR or SD for at least 3 months, and subsequently had PD were also eligible for re-induction. Eligible patients could receive treatment/maintenance therapy until they met off-treatment criteria.

Arm title	3mg/kg Ipilimumab
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Ipilimumab
Investigational medicinal product code	
Other name	YervoyBMS-734016
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	In vitro use

Dosage and administration details:

Ipilimumab was administered IV over 90 minutes on Day 1 of each 21-day cycle for 4 cycles in the absence of dose-limiting toxicity (DLT) or disease progression. Subjects received no experimental drug therapy on Days 2 to 21 of cycles 1 through 4. From Cycle 5 onward (with Cycle 5 at Week 12), ipilimumab was administered approximately every 12 weeks (maintenance dosing).

Subjects who entered the maintenance phase and had confirmed PD during the maintenance treatment were eligible to receive re-induction therapy using ipilimumab at the assigned dose and schedule specified in the protocol (Day 1 of a 21-day cycle for 4 cycles). Patients who stopped maintenance treatment because of a CR and subsequently had confirmed PD were eligible to receive re-induction as

well. Subjects with an initial PR or CR or SD for at least 3 months, and subsequently had PD were also eligible for re-induction. Eligible patients could receive treatment/maintenance therapy until they met off-treatment criteria.

Arm title	5mg/kg Ipilimumab
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Ipilimumab
Investigational medicinal product code	
Other name	YervoyBMS-734016
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	In vitro use

Dosage and administration details:

Ipilimumab was administered IV over 90 minutes on Day 1 of each 21-day cycle for 4 cycles in the absence of dose-limiting toxicity (DLT) or disease progression. Subjects received no experimental drug therapy on Days 2 to 21 of cycles 1 through 4. Primary: Number of Deaths

End point title	Number of Deaths ^[15]
-----------------	----------------------------------

End point description:

The total number of deaths due to any cause, including deaths that occurred off-study, was reported for each arm. All treated subjects were included in the analysis.

End point type	Primary
----------------	---------

End point timeframe:

From Study Initiation to Study Closure (Approximately 67 months)

Notes:

[15] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only summary statistics were reported for this endpoint.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 May 2008	Archived biopsy specimen analysis applies to NCI subjects only; Clarification of urine test to include VMA and HVA combination test for subjects ≤ 14 years of age, and 24-hour test for subjects > 14 years; Clarifications regarding endocrine testing and GH sampling, and regarding fasting for 12 hours prior to sample collection.
05 March 2009	Eligibility: changed lower limit for age from 3 to 2 years of age.
11 March 2009	Revised comprehensive adverse events and potential risks, and informed consent to include the modified risk information from CTEP. Additional eligibility criteria added to exclude subjects with autoimmune disease, including autoimmune hemolytic anemia, ulcerative and hemorrhagic colitis, endocrine disorders, sarcoid granuloma, myasthenia gravis, polymyositis, and Guillain-Barre syndrome. Clarified criteria for not receiving subsequent doses of ipilimumab if subjects experience: Non-hematologic dose limiting toxicities Immune-related adverse events possibly, probably or likely related to ipilimumab Grade 1 or 2 colitis and/or diarrhea which cannot be ascribed to another etiology and is possibly, probably or likely related to ipilimumab Grade 2 thyroid autoimmunity for Grade 2 uveitis Grade 3 or greater skin-related adverse events (regardless of causality)
25 May 2009	Revised the number of planned doses cohorts in the Phase 1 portion of the study from 4 to 3 dose levels (removed the 2 mg/kg dose cohort). Due to this revision the total number of subjects to be accrued was changed from 30 to 27 subjects.
22 July 2009	Revised exclusion criteria: Treatment with myeloid growth factors (sargramostim or filgrastim) within 72 hours prior study entry
26 January 2010	Revised exclusion criteria: No change in residual brain abnormality has been clarified to state no progression of residual brain abnormalities. Revised interval between surgery/radiotherapy and eligibility for subjects who have treated CNS metastases from 6 to 4 weeks. Pretreatment laboratories: Timing for obtaining pretreatment laboratory tests has been differentiated between those that should be collected within 72 hours (ie, hematology, LDH, ALT, AST, alkaline phosphatase, bilirubin (total and direct), BUN, creatinine, amylase, triglycerides, CPK, electrolytes, glucose, calcium, magnesium, phosphorus, uric acid, total protein and albumin) vs those collected within 4 weeks of therapy (ie, endocrine function tests, hepatitis serology, HLA typing, HAHA, anti HIV antibody and autoimmune profile (rheumatoid factor and ANA. Also for subjects with neuroblastoma: urine VMA and urine HVA, bone marrow biopsy and aspiration should be collected within 4 weeks of therapy. Baseline anti-HIV antibody added to baseline laboratory tests, to be obtained within 4 weeks of initiating the first cycle. Amylase, lipase and triglycerides have been separated from serum chemistry tests and are required to be drawn prior to every treatment cycle rather than at every laboratory draw (Cycle 1: Days 2, 4, 8, and 15, while on treatment).

15 March 2010	<p>Eligibility: Removed positive ANA from eligibility exclusion criteria</p> <p>Changed language of Comprehensive Adverse Events and Potential Risk (CAEPR) list to reflect CTCAE version 4.0. In addition revised the risk profile of ipilimumab to CAEPR Version 2.3.</p> <p>Added dose level 4 (10 mg/kg) to the dose escalation schema.</p> <p>Added language to expand the cohort of subjects receiving the highest dose tolerated to include at least four subjects 12 years of age or older (to obtain additional data regarding tolerability).</p> <p>Under Statistical Considerations: the expected accrual for the dose escalation was increased from 15 to 18 subjects.</p>
26 April 2010	<p>Clarified that the dose escalation (Phase 1 part of this study): consists of 4 and not 5 dose levels by removing the dose level -1 (0.5 mg/kg) cohort</p> <p>expected number of subjects to be accrued in the dose escalation phase is 24 and not 18 subjects.</p>
08 June 2010	<p>Eligibility:</p> <p>Baseline HIV and hepatitis serology changed from 4 to 12 weeks of initiation of first cycle.</p> <p>For subjects who received irradiation (for CNS metastasis), time to have completed therapy changed from 4 weeks to 1 week prior to enrollment.</p> <p>Changed the location of where ipilimumab can be administered from and in-patient setting to an out-patient setting</p> <p>Changed the monitoring of vital signs at Cycle 1 from the first 24 hours to the first 6 hours.</p> <p>Revised algorithm for management and assessment of diarrhea, hepatotoxicity, and general recommendations for the management of immune-related adverse events.</p> <p>Under 'Background' revised definition of high-risk neuroblastoma from >1 year to 18 months with metastatic disease.</p> <p>Clarified RECIST Criteria to state that tumor markers alone cannot be used to assess response with the exception of neuroblastoma.</p>
01 August 2010	<p>Changed CTCAE criteria to be used from version 3.0 to 4.0 with effective start date 01-Aug-2010. Cite version change under the following:</p> <p>definitions of dose limiting toxicities</p> <p>reporting changes in blood pressure</p> <p>off-treatment criteria</p> <p>toxicity criteria</p>
27 August 2010	<p>Removed vital signs monitoring at 8, 16, and 24 hours after ipilimumab administration.</p>
07 February 2011	<p>Added normal ranges for non-hematologic dose limiting toxicities for ALT, AST, and GGT. For alkaline phosphatase, normal ranges by age and gender were added.</p>
01 September 2011	<p>Removed exclusion criterion "subjects requiring supplemental oxygen"</p>
28 September 2011	<p>Updated the risk information for ipilimumab per CAEPR version 2.4.</p> <p>New risk:</p> <p>rare but serious bleeding disorder cause by autoantibodies</p> <p>potentially life threatening condition affecting less than 10% of the skin in which cell deaths causes epidermis (outer layer) to separate from dermis (middle layer)</p> <p>Increased risk attribution:</p> <p>inability of the adrenal glands to produce a normal quantity of hormones</p> <p>abnormally high or abnormally low levels of thyroid gland hormone</p> <p>changed from 'reported but undetermined' to 'rare but serious':</p> <p>inflammation of the heart muscle</p>

30 November 2011	Expanded the cohort of subjects at the highest maximum tolerated dose (5 mg/kg) to include 6 subjects <12 years of age. Revised inclusion criterion: hematologic function of transfusion independent platelet count from $\geq 75,000 \mu\text{L}$ to $\geq 50,000 \mu\text{L}$. normal bilirubin from 'direct' to 'total' Revised overall study design to allow maintenance therapy past 2 years provided that subjects continue to experience clinical benefit. Added section describing ipilimumab treatment during maintenance in those subjects who undergo resection and malignant metastases during this phase.
16 December 2011	Added language to expand the number of subjects to be included in the planned cohort expansion of the 5 and 10 m/kg doses to include 6 subjects <12 years of age.
18 January 2012	Allowed subjects to receive reinduction with 4 doses of ipilimumab at assigned dose followed by another maintenance phase for subjects who have progressed during maintenance therapy.
17 May 2012	Eligibility: changed lower limit for age from 2 to 1 year of age.
25 June 2013	Eligibility: A subject with viral hepatitis or HIV was to be excluded from study, but serology was not required unless infection was clinically suspected

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
