

Clinical trial results:

A randomized open-label study to compare safety and efficacy of vildagliptin versus NPH insulin add-on to glimepiride in patients with type 2 diabetes mellitus that do not reach adequate glycemic control on their current sulfonylurea monotherapy

Summary

EudraCT number	2012-001143-46

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 October 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 October 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

1. To demonstrate that vildagliptin in addition to glimepiride is superior to Neutrales Protamin Hagedorn (NPH) insulin in addition to glimepiride with respect to the incidence of the combined endpoint, defined as achieving the blood glucose target level of HbA1c <7.0% without any confirmed hypoglycemic event (HE) (defined as blood glucose (BG) measurement <3.9 mmol/L [<71 mg/dL]) and weight gain (defined as increase of at least 3%) in Type II diabetes mellitus (T2DM) patients.
2. To demonstrate that vildagliptin in addition to glimepiride is superior to NPH insulin in addition to glimepiride with respect to the rate of confirmed HEs (defined as BG measurement <3.9 mmol/L [<71 mg/dL]) in T2DM patients.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

Randomized patients were on a stable dose of glimepiride of 4 mg (or if not tolerated, the maximal tolerated dose up to 4 mg) for at least 4 weeks prior to Visit 1. The glimepiride background therapy had to be kept at a stable dose throughout the study.

Evidence for comparator: -

Actual start date of recruitment	27 August 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 162
Worldwide total number of subjects	162
EEA total number of subjects	162

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	58
From 65 to 84 years	103
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Subjects were recruited to participate at 54 sites in Germany.

Pre-assignment

Screening details:

294 patients were screened over a 1-week period. 162 completed and randomized but 161 got exposed to study drug.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Vildagliptin

Arm description:

Subjects received Vildagliptin with glimepiride for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Vildagliptin
Investigational medicinal product code	
Other name	Galvus
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

50 mg per os once daily as an add-on to the current glimepiride background therapy. The vildagliptin dose had to be kept stable after randomization (Visit 2) throughout the study.

Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects were administered 4 mg once daily or, if not tolerated, the maximal tolerated dose up to 4 mg.

Arm title	Neutrales Protamin Hagedorn (NPH) Insulin
------------------	---

Arm description:

Subjects received NPH insulin with glimepiride for 24 weeks.

Arm type	Experimental
Investigational medicinal product name	NPH Insulin U100
Investigational medicinal product code	
Other name	Protaphane
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Intramuscular use

Dosage and administration details:

1 subcutaneous dose per day, forced titration as an add-on to the current glimepiride background therapy. Insulin treatment was to be initiated with a single starting dose of 0.3 – 0.4 U/kg based on glimepiride dosing and BMI (0.3 U/kg, if both glimepiride \leq 4 mg and BMI $<$ 25 kg/m², and 0.4 U/kg, if glimepiride \leq 4 mg and BMI \geq 25 kg/m²). Afterwards, insulin doses were to be titrated individually during the first 4 weeks of treatment using a pre-defined titration regimen in order to achieve a target

fasting blood glucose (FBG) concentration of <100 mg/dL (<5.5 mmol/L) without significant hypoglycemia.

Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects were administered 4 mg once daily or, if not tolerated, the maximal tolerated dose up to 4 mg.

Number of subjects in period 1	Vildagliptin	Neutrales Protamin Hagedorn (NPH) Insulin
Started	83	79
Completed	58	70

Units: percent of HbA1c				
arithmetic mean (standard deviation)	-0.48 (± 0.89)	-0.8 (± 0.78)		

Statistical analyses

Secondary: Change From Baseline in Treatment Satisfaction Questionnaire for Medication (TSQM-9) Scores at End of Treatment

End point title	Change From Baseline in Treatment Satisfaction Questionnaire for Medication (TSQM-9) Scores at End of Treatment
-----------------	---

End point description:

The TSQM-9 is a psychometrically sound and valid measure of the major dimensions of patients' satisfaction with medication. The 4 scales of the original TSQM Version 1.4 with 14 items include the effectiveness scale (questions 1 to 3), the side effects scale (questions 4 to 8), the convenience scale (questions 9 to 11), and the global satisfaction scale (questions 12 to 14). In the TSQM-9, the five items related to side effects of medication are not included. The TSQM-9 domain scores range from 0 to 100, with higher scores representing higher satisfaction on that domain. A positive change from baseline indicates that satisfaction has increased.

This endpoint analyzed the Full Analysis Set (FAS), defined as all randomized patients who received at least one dose of randomized study drug, and the Safety Set (SAF), defined as all patients who received at least one dose of study drug whether or not being randomized. The SAF and FAS were identical in this study.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 September 2012	The following changes were made to the study protocol: * Direct bilirubin limits were deleted in exclusion criterion No. 4 in order to be consistent with the current SmPC. Nonetheless, total bilirubin limits were maintained for the ongoing trial. * The confirmation of abnormal liver values within 3 working days (re-test) was included for clarification in exclusion criterion No. 4, since re-testing was previously described in Appendix 2 of the study protocol only.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
