

## Clinical trial results:

A randomized, double-blind, 12-week treatment, parallel-group study to evaluate the efficacy and safety of QMF149(150 g/160 g o.d.) compared with salmeterol xinafoate/fluticasone propionate (50 g/500 g b.i.d.) in patients with chronic obstructive pulmonary disease.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.novfor> complete trial results.

## Summary

EudraCT number	2012-001172-12
Trial protocol	HU GR BG BE SE FI PL ES DK
Global end of trial date	25 September 2013

## Results information

Result version number	v1 (current)
This version publication date	07 July 2018
First version publication date	07 July 2018

## Trial information

### Trial identification

Sponsor protocol code	CQMF149F2202
-----------------------	--------------

### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01636076
WHO universal trial number (UTN)	-

Notes:

## Sponsors

Sponsor organisation name	Novartis Pharma AG
Sponsor organisation address	CH-4002, Basel, Switzerland,
Public contact	Clinical Disclosure Office, Novartis Pharma AG, 41 613241111,
Scientific contact	Clinical Disclosure Office, Novartis Pharma AG, 41 613241111,

Notes:

## Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 September 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 September 2013
Global end of trial reached?	Yes
Global end of trial date	25 September 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to demonstrate QMF149 (150/160 µg, od) delivered via Concept1 device is at least non-inferior to salmeterol xinafoate/fluticasone propionate (50/500 µg bid) delivered via Accuhaler® in terms of trough FEV1 after 12 weeks of treatment. Trough refers to the mean of FEV1 at 23 h 10 min and 23 h 45 min after the morning dose.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

At the start of Screening (Visit 1), all patients were provided with a short acting β<sub>2</sub>-agonist (salbutamol or albuterol) which they were instructed to use throughout the study as rescue medication. Nebulized salbutamol was not allowed as rescue medication throughout the entire trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 31
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Bulgaria: 53
Country: Number of subjects enrolled	Denmark: 35
Country: Number of subjects enrolled	Finland: 14
Country: Number of subjects enrolled	Germany: 62
Country: Number of subjects enrolled	Greece: 34
Country: Number of subjects enrolled	Hong Kong: 4
Country: Number of subjects enrolled	Hungary: 66
Country: Number of subjects enrolled	Israel: 68
Country: Number of subjects enrolled	Malaysia: 13
Country: Number of subjects enrolled	Poland: 86

Country: Number of subjects enrolled	Romania: 14
Country: Number of subjects enrolled	South Africa: 64
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Sweden: 33
Country: Number of subjects enrolled	Thailand: 37
Worldwide total number of subjects	629
EEA total number of subjects	412

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	350
From 65 to 84 years	278
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 117 centres in 18 countries

### Pre-assignment

Screening details:

982 patients screened, 629 patients randomized

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	QMF149

Arm description:

QMF149 (Indacaterol acetate/Mometasone furoate) 150/160 µg o.d. delivered via Concept1 device

Arm type	Experimental
Investigational medicinal product name	QMF 149
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

QMF149 was supplied to the investigators by Novartis Drug Supply Management (DSM) as dry powder FDC formulation at dose strengths of Indacaterol acetate/Mometasone furoate 150/160 µg. QMF149 was administered once daily in the morning via Concept1 device as a single dose dry powder inhaler (SDDPI).

<b>Arm title</b>	Salmeterol xinafoate/fluticasone propionate
------------------	---

Arm description:

Salmeterol xinafoate/fluticasone propionate 50/500 µg b.i.d, delivered via Accuhaler®

Arm type	Active comparator
Investigational medicinal product name	xinafoate/fluticasone propionate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for nebuliser suspension
Routes of administration	Inhalation use

Dosage and administration details:

Salmeterol xinafoate/fluticasone propionate as dry powder of 50/500 µg dose strengths were locally sourced. Salmeterol xinafoate/fluticasone propionate 50/500 µg bid, delivered via Accuhaler®.

Number of subjects in period 1	QMF149	Salmeterol xinafoate/fluticasone propionate
Started	316	313
Completed	299	288
Not completed	17	25
Physician decision	1	1
Consent withdrawn by subject	7	10
Adverse event, non-fatal	6	11
Non-compliance with study treatment	1	1
Terminated by sponsor	1	1
Lost to follow-up	1	-
Lack of efficacy	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	QMF149
Reporting group description: QMF149 (Indacaterol acetate/Mometasone furoate) 150/160 µg o.d. delivered via Concept1 device	
Reporting group title	Salmeterol xinafoate/fluticasone propionate
Reporting group description: Salmeterol xinafoate/fluticasone propionate 50/500 µg b.i.d, delivered via Accuhaler®	

Reporting group values	QMF149	Salmeterol xinafoate/fluticasone propionate	Total
Number of subjects	316	313	629
Age categorical Units: Subjects			
Adults (18 - <65 )	173	177	350
adults (65 - <85)	142	136	278
adults (>=85)	1	0	1
Age Continuous   Units: years			
arithmetic mean	64.8	64.1	
standard deviation	± 7.74	± 7.89	-
Gender, Male/Female Units: Participants			
Male	233	227	460
Female	83	86	169

## End points

### End points reporting groups

Reporting group title	QMF149
Reporting group description: QMF149 (Indacaterol acetate/Mometasone furoate) 150/160 µg o.d. delivered via Concept1 device	
Reporting group title	Salmeterol xinafoate/fluticasone propionate
Reporting group description: Salmeterol xinafoate/fluticasone propionate 50/500 µg b.i.d, delivered via Accuhaler®	

### Primary: Mixed Model for Repeated Measures (MMRM): Between-treatment comparisons for trough FEV1 (L) on Day 85

End point title	Mixed Model for Repeated Measures (MMRM): Between-treatment comparisons for trough FEV1 (L) on Day 85
End point description: Spirometry is conducted according to the global standard. Trough FEV1 is defined as the average of the 23 hour 10 minute and 23 hour 45 minute post dose FEV1 readings.	
End point type	Primary
End point timeframe: 12 weeks	

End point values	QMF149	Salmeterol xinafoate/fluticasone propionate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	316	313		
Units: Liters				
least squares mean (standard error)				
Full analysis set (n=291,282)	1.27 (± 0.0124)	1.215 (± 0.0124)		
Per protocol set (n=259,251)	1.277 (± 0.0136)	1.228 (± 0.0137)		

### Statistical analyses

Statistical analysis title	Mixed Model for Repeated Measures
Comparison groups	QMF149 v Salmeterol xinafoate/fluticasone propionate
Number of subjects included in analysis	629
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001
Method	Mixed models analysis
Parameter estimate	Mean difference (net)
Point estimate	0.056

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.0277
upper limit	0.0833
Variability estimate	Standard error of the mean
Dispersion value	0.0142

### Secondary: Trough FEV1 after first dose and after 4 and 12 weeks of treatment

End point title	Trough FEV1 after first dose and after 4 and 12 weeks of treatment
End point description: Spirometry is conducted according to the global standard. FEV1 is measured at pre-dose and post dose up to 1 hours on Day 1 and Day 28; 24 hours post-dose on Day 29 and 85. In a subset of approximately 60 patients, FEV1 is measured up to 20 hours postdose on Day 28 and Day 84.	
End point type	Secondary
End point timeframe: Day 1 and Day 85	

End point values	QMF149	Salmeterol xinafoate/fluticasone propionate

## Secondary: FEV1 AUC (5 min-4 h),

End point title	FEV1 AUC (5 min-4 h),
-----------------	-----------------------

End point description:

Spirometry is conducted according to the global standard. FEV1 AUC (5 min-4 h), (5 min-24 h) is measured after the first dose on Day 1 and on Day 28 and Day 84 in a subset of approximately 60 patients. Scheduled (not actual) time points are to be used. The interpretation of FEV1 at time 0 is the baseline value at the randomization visit and the latest pre-dose value (-50 min or -15 min) at subsequent visits. The standardized AUC(5 min – 4 h) for FEV1 will be summarized by treatment. The same will be repeated for standardized AUC for FEV1 between 5 min and 24 hours post morning dose.

End point title	Duration (in days) of COPD exacerbations
End point description:	
Duration and number of the COPD exacerbation will be analyzed by the negative binomial regression model including treatment, country, smoking status, and COPD severity as factors and FEV1 prior to inhalation and FEV1 15 min post inhalation of salbutamol/albuterol as covariates.	
End point type	Secondary
End point timeframe:	
12 weeks	

End point values	QMF149	Salmeterol xinafoate/fluticasone propionate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	316	313		
Units: Days				
arithmetic mean (standard deviation)	1.4 (± 6.59)	2 (± 6.28)		

## Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of patients exacerbation free at 12 weeks

End point title	Percentage of patients exacerbation free at 12 weeks
End point description: Time-to-event variables will be analyzed by the Kaplan-Meier estimates and the stratified Cox proportional hazard model by smoking status and COPD severity. The model will include treatment and country as factors, and FEV1 prior to inhalation and FEV1 15 min post inhalation of salbutamol/albuterol as covariates. The reported measure will detail the percentage of participants that were event free of a specified event.	
End point type	Secondary
End point timeframe: 12 weeks	

<b>End point values</b>	QMF149	Salmeterol xinafoate/fluticasone propionate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	316	313		
Units: Percentage of participants				
number (not applicable)	92.4	85.9		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Time (in days) to permanent study discontinuation due to COPD exacerbation

End point title	Time (in days) to permanent study discontinuation due to COPD exacerbation
End point description: Time-to-event variables will be analyzed by the Kaplan-Meier estimates and the stratified Cox proportional hazard model by smoking status and COPD severity. The model will include treatment and country as factors, and FEV1 prior to inhalation and FEV1 15 min post inhalation of salbutamol/albuterol as covariates.	
End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Assessment type	Systematic
-----------------	------------

### Dictionary used

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <a href="https://www.novctrd.com/CtrdWeb/home.nov">https://www.novctrd.com/CtrdWeb/home.nov</a> for complete trial results.
