Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000069-PIP02-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 March 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	18 January 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of mepolizumab 75 mg intravenous (i.v.) or 100 mg subcutaneous (SC) every 4 weeks versus placebo on the frequency of clinically significant exacerbations in adult and adolescent subjects with severe, uncontrolled, refractory asthma

Protection of trial subjects:

Numbing cream or spray was permitted at the site of injection and rescue medications (salbuterol/albuterol) are available to the participant throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 October 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 26
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	Belgium: 22
Country: Number of subjects enrolled	France: 72
Country: Number of subjects enrolled	Germany: 78

Country: Number of subjects enrolled	Chile: 23
Worldwide total number of subjects	580
EEA total number of subjects	273

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	25
Adults (18-64 years)	474
From 65 to 84 years	81
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Par. who met the eligibility criteria at screening, entered the Run-in period for a minimum of 1 week and a maximum of 6 weeks. Par. who received all 8 doses and met the eligibility criteria were offered the opportunity to participate in an open label extension (OLE) study. Par. not entering the OLE study completed the Follow-up Visit.

Pre-assignment

Screening details:

A total of 802 participants (par.) were enrolled; 82 were Screen failures; 140 were Run-in failures; 580 were randomized, of which 576 received at least 1 dose of study drug.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo intravenously (IV) plus placebo subcutaneously (SC) every 4 weeks (for a total of 8 doses), with the last dose at Week 28. The SC dose and the IV dose were administered into separate arms. A topical anaesthetic was permitted at the injection site to minimize discomfort, as needed. Rescue personnel and rescue medications (salbutamol/albuterol) /equipment were available throughout the study.

Arm type	Placebo
Investigational medicinal product name	Placebo (Normal Saline)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

IV and SC q4weeks

Arm title	Mepolizumab 75 mg IV
------------------	----------------------

Arm description:

Participants received mepolizumab 75 milligrams (mg) IV plus placebo SC every 4 weeks (for a total of 8 doses), with the last dose at Week 28. The SC dose and the IV dose were administered into separate arms. A topical anaesthetic was permitted at the injection site to minimize discomfort, as needed. Rescue personnel and rescue medications (salbutamol/albuterol) /equipment were available throughout the study.

Arm type	Experimental
Investigational medicinal product name	Mepolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

75mg IV q4weeks x 8doses plus NS SC

Arm title	Mepolizumab 100 mg SC
------------------	-----------------------

Arm description:

Participants received placebo IV plus mepolizumab 100 mg SC every 4 weeks (for a total of 8 doses), with the last dose at Week 28. The SC dose and the IV dose were administered into separate arms. A topical anaesthetic was permitted at the injection site to minimize discomfort, as needed. Rescue personnel and rescue medications (salbutamol/albuterol) /equipment were available throughout the study.

Arm type	Experimental
Investigational medicinal product name	Mepolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

100mg SC q4 weeks x 8 doses plus NS IV

Number of subjects in period 1^[1]	Placebo	Mepolizumab 75 mg IV	Mepolizumab 100 mg SC
Started	191	191	194
Completed	179	175	185
Not completed	12	16	9
Adverse event, serious fatal	1	-	-
Consent withdrawn by subject	5	9	4
Physician decision	2	1	-
Adverse event, non-fatal	3	-	1
Lost to follow-up	-	2	2
Lack of efficacy	1	1	2
Protocol deviation	-	3	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 580 participants were randomized, of which 576 received at least 1 dose of study drug. The baseline period represents the participants that received at least 1 dose of study drug.

Primary: Number of clinically significant exacerbations of asthma per year

End point title	Number of clinically significant exacerbations of asthma per year
End point description: Clinically significant exacerbations of asthma are defined as worsening of asthma which required use of systemic corticosteroids (IV or oral steroid like prednisone, for at least 3 days or a single intramuscular (IM) corticosteroid (CS) dose is required. For maintenance of systemic corticosteroids, at least double the existing maintenance dose for at least 3 days was required) and/or hospitalization and/or emergency department (ED) visits. The frequency of clinically significant exacerbations of asthma over the 32-week treatment period is expressed as the number of exacerbations per year. Analysis of the number of exacerbations performed using a negative binomial model with covariates of treatment group, baseline maintenance OCS therapy (OCS vs. no OCS), region, exacerbations in the year prior to the study (as an ordinal variable) and baseline % predicted FEV1, and with logarithm of time on treatment as an offset variable.	
End point type	Primary
End point timeframe: From randomization (Week 0) to Week 32 or if Early Withdrawal (EW) 4 weeks post last dose	

End point values	Placebo	Mepolizumab 75 mg IV	Mepolizumab 100 mg SC

Secondary: Mean change from Baseline in the St. George's Respiratory Questionnaire total score at Week 32

End point title	Mean change from Baseline in the St. George's Respiratory Questionnaire total score at Week 32
-----------------	--

End point description:

The St. George's Respiratory Questionnaire is an established instrument, comprising 50 questions, evaluating symptoms, activity, and impacts; to measure Quality of Life in participants with diseases of

airway obstruction and to elicit the participant's opinion of his/her health. The lowest possible value is zero and the highest possible value is 100. The higher values correspond to greater impairment in quality of life. The questionnaire was administered at Baseline (Visit 2) and at the Exit Visit (approximately 4 weeks after the last dose of study treatment). The change from baseline is defined as the difference between the value of the endpoint at the time point of interest and the baseline value. Analysis performed using analysis of covariance with covariates of baseline, region, baseline maintenance OCS therapy (OCS vs. no OCS), exacerbations in the year prior to the study (as an ordinal variable), baseline % predicted FEV1, and treatment.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

On-treatment serious adverse events (SAEs) and non-serious AEs were defined as events occurring from the first dose of investigational product until 28 days after the last dose of investigational product.

Adverse event reporting additional description:

Serious adverse events (SAEs) and Non-serious AEs were collected in members of Intent-to-Treat (ITT) Population, comprised of all participants who were randomized and who received at least one dose of study medication. The number of occurrences for non-serious AEs was not collected; therefore, 0 has been entered.

Assessment type	Systematic
