

## Clinical trial results:

### A Double-blind, Randomized, Placebo and Ezetimibe Controlled, Multicenter Study to Evaluate Safety, Tolerability and Efficacy of AMG 145 on LDL-C in Combination With Statin Therapy in Subjects With Primary Hypercholesterolemia and Mixed Dyslipidemia

#### Summary

EudraCT number	2012-001363-70
Trial protocol	BE ES HU NL IT CZ SE DK GB DE
Global end of trial date	04 December 2013

#### Results information

Result version number	v1 (current)
This version publication date	20 June 2016
First version publication date	06 August 2015

#### Trial information

##### Trial identification

Sponsor protocol code	20110115
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01763866

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 December 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 December 2013
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to evaluate the effect of 12 weeks of evolocumab administered subcutaneously every 2 weeks (Q2W) and monthly (QM) when used in combination with a statin, compared with placebo, on percent change from baseline in low-density lipoprotein cholesterol (LDL-C) in patients with primary hypercholesterolemia and mixed dyslipidemia.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations and guidelines, and Food and Drug Administration (FDA) regulations, and guidelines set forth in 21 CFR Parts 11, 50, 54, 56, and 312.

All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 558
Country: Number of subjects enrolled	Belgium: 38
Country: Number of subjects enrolled	Canada: 176
Country: Number of subjects enrolled	Czech Republic: 238
Country: Number of subjects enrolled	Denmark: 137
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Germany: 123
Country: Number of subjects enrolled	Hungary: 64
Country: Number of subjects enrolled	Italy: 53
Country: Number of subjects enrolled	Netherlands: 40
Country: Number of subjects enrolled	Russian Federation: 122
Country: Number of subjects enrolled	Spain: 21
Country: Number of subjects enrolled	Sweden: 35
Country: Number of subjects enrolled	Switzerland: 24

Country: Number of subjects enrolled	United Kingdom: 200
Country: Number of subjects enrolled	Australia: 47
Country: Number of subjects enrolled	Hong Kong: 7
Worldwide total number of subjects	1899
EEA total number of subjects	965

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1226
From 65 to 84 years	673
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Patients aged 18 to 80 years with a screening LDL-C level of  $\geq 150$  mg/dL (no statin at screening),  $\geq 100$  mg/dL (nonintensive statin at screening), or  $\geq 80$  mg/dL (intensive statin at screening) and fasting triglyceride levels of 400 mg/dL or less.

First patient enrolled on 15 January 2013; Last patient enrolled on 10 July 2013.

### Pre-assignment

Screening details:

A total of 2067 patients were first randomized to 1 of the 5 open-label statin cohorts (atorvastatin 10 mg or 80 mg, rosuvastatin 5 mg or 40 mg, or simvastatin 40 mg), and 1899 were randomized to investigational product.

Randomization into the statin dose cohorts was stratified by entry statin therapy and by use of certain concomitant medications.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	A10 PBO Q2W

Arm description:

Participants received atorvastatin 10 mg once daily during the 4 week lipid stabilization period and then in combination with placebo (PBO) subcutaneous injection once every 2 weeks (Q2W) and placebo tablets once daily for up to 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered by subcutaneous injection

Investigational medicinal product name	Placebo to Ezetimibe
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered orally once daily

Investigational medicinal product name	Atorvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Administered orally once a day

<b>Arm title</b>	A10 PBO QM
------------------	------------

## Arm description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month (QM) and placebo tablets once a day for up to 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

## Dosage and administration details:

Administered by subcutaneous injection

Investigational medicinal product name	Placebo to Ezetimibe
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

## Dosage and administration details:

Administered orally once daily

Investigational medicinal product name	Atorvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

## Dosage and administration details:

Administered orally once a day

<b>Arm title</b>	A10 EZE (Q2W)
------------------	---------------

## Arm description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe (EZE) orally once a day for up to 12 weeks.

Arm type	Active comparator
Investigational medicinal product name	Placebo to Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

## Dosage and administration details:

Administered by subcutaneous injection

Investigational medicinal product name	Ezetimibe
Investigational medicinal product code	Zetia
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

## Dosage and administration details:

Administered orally once daily

Investigational medicinal product name	Atorvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

## Dosage and administration details:

Administered orally once a day

<b>Arm title</b>	A10 EZE (QM)
Arm description:	
Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.

## Baseline characteristics

### Reporting groups

Reporting group title	A10 PBO Q2W
Reporting group description: Participants received atorvastatin 10 mg once daily during the 4 week lipid stabilization period and then in combination with placebo (PBO) subcutaneous injection once every 2 weeks (Q2W) and placebo tablets once daily for up to 12 weeks.	
Reporting group title	A10 PBO QM
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month (QM) and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A10 EZE (Q2W)
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe (EZE) orally once a day for up to 12 weeks.	
Reporting group title	A10 EZE (QM)
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A10 EvoMab Q2W
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab (EvoMab) by subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A10 EvoMab QM
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 PBO Q2W
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 PBO QM
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 EZE (Q2W)
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A80 EZE (QM)
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A80 EvoMab Q2W
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks and placebo	

tablets once a day for up to 12 weeks.

Reporting group title	A80 EvoMab QM
-----------------------	---------------

Reporting group description:

Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.

Reporting group title	R5 PBO Q2W
-----------------------	------------

Reporting group description:

Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	R5 PBO QM
-----------------------	-----------

Reporting group description:

Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.

Reporting group title	R5 EvoMab Q2W
-----------------------	---------------

Reporting group description:

Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	R5 EvoMab QM
-----------------------	--------------

Reporting group description:

Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.

Reporting group title	R40 PBO Q2W
-----------------------	-------------

Reporting group description:

Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	R40 PBO QM
-----------------------	------------

Reporting group description:

Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.

Reporting group title	R40 EvoMab Q2W
-----------------------	----------------

Reporting group description:

Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	R40 EvoMab QM
-----------------------	---------------

Reporting group description:

Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.

Reporting group title	S40 PBO Q2W
-----------------------	-------------

Reporting group description:

Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	S40 PBO QM
-----------------------	------------

Reporting group description:

Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.

Reporting group title	S40 EvoMab Q2W
-----------------------	----------------

Reporting group description:

Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.

Reporting group title	S40 EvoMab QM
-----------------------	---------------

Reporting group description:

Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.

Reporting group values	A10 PBO Q2W	A10 PBO QM	A10 EZE (Q2W)
Number of subjects	56	55	56
Age categorical			
Units: Subjects			

Age Continuous			
Units: years			
arithmetic mean	58.3	62.2	61
standard deviation	± 10.5	± 10.4	± 9
Gender, Male/Female			
Units: participants			
Female	24	28	29
Male	32	27	27
Race/Ethnicity, Customized			
Units: Subjects			
Hispanic or Latino	3	2	2
Not Hispanic or Latino	53	53	54
Race/Ethnicity, Customized			
Units: Subjects

Asian	1	0	2
Black or African American	3	0	1
Native Hawaiian or Other Pacific Islander	0	0	0
White	52	55	53
Other	0	0	0
Mixed Race	0	0	0
Stratification Factor: Entry Statin Therapy			
Intensive statin use was defined as daily atorvastatin (40mg or greater), rosuvastatin (20mg or greater), simvastatin (80 mg), or any statin plus ezetimibe.			
Units: Subjects			
Intensive statin use	18	19	10
Non-intensive statin use	20	25	30
No statin use	18	11	16
Low-Density Lipoprotein Cholesterol (LDL-C) Concentration			
Data are provided for the full analysis set (all participants randomized to investigational product (IP) who received at least 1 dose of IP (subcutaneously or orally).			
Units: mg/dL			
arithmetic mean	123	123.7	126.8
standard deviation	± 46.6	± 47.9	± 49.6
Non-High-Density Lipoprotein Cholesterol (non-HDL-C) Concentration			
Data are provided for the full analysis set.			
Units: mg/dL			
arithmetic mean	149.1	147.7	153.8
standard deviation	± 46.9	± 51.4	± 53.2
Apolipoprotein B Concentration			
Data are provided for the full analysis set			

Units: mg/dL			
arithmetic mean	95.3	95.3	101.3
standard deviation	± 26	± 29.6	± 31.2
Total Cholesterol/HDL-C Ratio			
Data are provided for the full analysis set			
Units: ratio			
arithmetic mean	3.988	3.859	4.112
standard deviation	± 1.154	± 1.396	± 1.311
Apolipoprotein B/Apolipoprotein A1 Ratio			
Data are provided for the full analysis set			
Units: ratio			
arithmetic mean	0.666	0.647	0.692
standard deviation	± 0.216	± 0.266	± 0.243
Lipoprotein(a) Concentration			
Data are provided for the full analysis set			
Units: nmol/L			
median	31.5	41	37
inter-quartile range (Q1-Q3)	13 to 87.5	15 to 106	9.5 to 190
Triglyceride Concentration			
Data are provided for the full analysis set			
Units: mg/dL			
median	112	108	129.5
inter-quartile range (Q1-Q3)	83 to 176	83 to 145	94 to 151.5
Very Low Density Lipoprotein Cholesterol (VLDL-C) Concentration			
Data are provided for the full analysis set			
Units: mg/dL			
median	22	22	25.5
inter-quartile range (Q1-Q3)	17 to 35	17 to 29	19 to 30
HDL-C Concentration			
Data are provided for the full analysis set			
Units: mg/dL			
arithmetic mean	54.1	57.9	54.1
standard deviation	± 16.6	± 18.4	± 17.2

## End points

### End points reporting groups

Reporting group title	A10 PBO Q2W
Reporting group description: Participants received atorvastatin 10 mg once daily during the 4 week lipid stabilization period and then in combination with placebo (PBO) subcutaneous injection once every 2 weeks (Q2W) and placebo tablets once daily for up to 12 weeks.	
Reporting group title	A10 PBO QM
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month (QM) and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A10 EZE (Q2W)
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe (EZE) orally once a day for up to 12 weeks.	
Reporting group title	A10 EZE (QM)
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A10 EvoMab Q2W
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab (EvoMab) by subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A10 EvoMab QM
Reporting group description: Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 PBO Q2W
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 PBO QM
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 EZE (Q2W)
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A80 EZE (QM)
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.

## Statistical analyses

Statistical analysis title	A10: Evolocumab Q2W vs Placebo Q2W
----------------------------	------------------------------------

Statistical analysis description:

The null hypothesis was that there was no difference in the percent change from Baseline at Week 12 in LDL-C between evolocumab and placebo, and the alternative hypothesis was that a mean difference did exist.

Comparison groups	A10 EvoMab Q2W v A10 PBO Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[1]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-71.42
Confidence interval	
level	95 %
sides	2-sided
lower limit	-77.55
upper limit	-65.29
Variability estimate	Standard error of the mean
Dispersion value	3.11

Notes:

[1] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

Statistical analysis title	A10: Evolocumab QM vs Placebo QM
----------------------------	----------------------------------

**Statistical analysis description:**

The null hypothesis was that there was no difference in the percent change from Baseline at Week 12 in LDL-C between evolocumab and placebo, and the alternative hypothesis was that a mean difference did exist.

## Statistical analyses

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A10 PBO Q2W v A10 EvoMab Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[29]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-83.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-92.6
upper limit	-74.6
Variability estimate	Standard error of the mean
Dispersion value	4.5

Notes:

[29] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Placebo QM
Comparison groups	A10 PBO QM v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[30]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-79.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	-90.2
upper limit	-69.2
Variability estimate	Standard error of the mean
Dispersion value	5.3

Notes:

[30] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A10 EZE (Q2W) v A10 EvoMab Q2W

Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[31]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-44.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-53.4
upper limit	-35.3
Variability estimate	Standard error of the mean
Dispersion value	4.4

Notes:

[31] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A10 EZE (QM) v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[32]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-55
Confidence interval	
level	95 %
sides	2-sided
lower limit	-65.4
upper limit	-44.6
Variability estimate	Standard error of the mean
Dispersion value	5.3

Notes:

[32] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A80 PBO Q2W v A80 EvoMab Q2W
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[33]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-69.9

Confidence interval	
level	95 %
sides	2-sided
lower limit	-81.9
upper limit	-57.8
Variability estimate	Standard error of the mean
Dispersion value	6.1

Notes:

[33] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Placebo QM
Comparison groups	A80 PBO QM v A80 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[34]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-65.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-74.5
upper limit	-56.7
Variability estimate	Standard error of the mean
Dispersion value	4.5

Notes:

[34] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A80 EZE (Q2W) v A80 EvoMab Q2W
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	< 0.001 <sup>[35]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-45.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	-57.7
upper limit	-33.9
Variability estimate	Standard error of the mean
Dispersion value	6

Notes:

[35] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A80 EZE (QM) v A80 EvoMab QM
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[36]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-38.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	-47.8
upper limit	-29.9
Variability estimate	Standard error of the mean
Dispersion value	4.5

Notes:

[36] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R5 PBO Q2W v R5 EvoMab Q2W
Number of subjects included in analysis	171
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[37]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-75.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-83.9
upper limit	-67
Variability estimate	Standard error of the mean
Dispersion value	4.3

Notes:

[37] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab QM vs Placebo QM
Comparison groups	R5 PBO QM v R5 EvoMab QM
Number of subjects included in analysis	172
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[38]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-77.9

Confidence interval	
level	95 %
sides	2-sided
lower limit	-88
upper limit	-67.8
Variability estimate	Standard error of the mean
Dispersion value	5.1

Notes:

[38] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R40 PBO Q2W v R40 EvoMab Q2W
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[39]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-55.8
Confidence interval	
level	95 %
sides	2-sided
lower limit	-63.1
upper limit	-48.4
Variability estimate	Standard error of the mean
Dispersion value	3.7

Notes:

[39] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab QM vs Placebo QM
Comparison groups	R40 PBO QM v R40 EvoMab QM
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[40]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-50.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-60.6
upper limit	-40.6
Variability estimate	Standard error of the mean
Dispersion value	5.1

Notes:

[40] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	S40 PBO Q2W v S40 EvoMab Q2W
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[41]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-78.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	-86.2
upper limit	-70
Variability estimate	Standard error of the mean
Dispersion value	4.1

Notes:

[41] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab QM vs Placebo QM
Comparison groups	S40 PBO QM v S40 EvoMab QM
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[42]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-80.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	-91.7
upper limit	-68.6
Variability estimate	Standard error of the mean
Dispersion value	5.8

Notes:

[42] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

## Secondary: Change From Baseline in LDL-C at Week 12

End point title	Change From Baseline in LDL-C at Week 12

## Statistical analyses

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A10 PBO Q2W v A10 EvoMab Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[57]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-60.28
Confidence interval	
level	95 %
sides	2-sided
lower limit	-65.29
upper limit	-55.27
Variability estimate	Standard error of the mean
Dispersion value	2.54

Notes:

[57] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Placebo QM
Comparison groups	A10 PBO QM v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[58]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-57.37
Confidence interval	
level	95 %
sides	2-sided
lower limit	-63.23
upper limit	-51.51
Variability estimate	Standard error of the mean
Dispersion value	2.97

Notes:

[58] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A10 EZE (Q2W) v A10 EvoMab Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[59]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-32.77
Confidence interval	
level	95 %
sides	2-sided
lower limit	-37.84
upper limit	-27.7
Variability estimate	Standard error of the mean
Dispersion value	2.57

Notes:

[59] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A10 EZE (QM) v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[60]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-39.53
Confidence interval	
level	95 %
sides	2-sided
lower limit	-45.34
upper limit	-33.71
Variability estimate	Standard error of the mean
Dispersion value	2.95

Notes:

[60] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A80 PBO Q2W v A80 EvoMab Q2W

Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[61]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-65.17
Confidence interval	
level	95 %
sides	2-sided
lower limit	-73.78
upper limit	-56.56
Variability estimate	Standard error of the mean
Dispersion value	4.37

Notes:

[61] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Placebo QM
Comparison groups	A80 PBO QM v A80 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[62]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-64.76
Confidence interval	
level	95 %
sides	2-sided
lower limit	-72.32
upper limit	-57.19
Variability estimate	Standard error of the mean
Dispersion value	3.84

Notes:

[62] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A80 EZE (Q2W) v A80 EvoMab Q2W
Number of subjects included in analysis	165
Analysis specification	Post-hoc
Analysis type	superiority
P-value	< 0.001 <sup>[63]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-38.25

Confidence interval	
level	95 %
sides	2-sided
lower limit	-46.68
upper limit	-29.81
Variability estimate	Standard error of the mean
Dispersion value	4.28

Notes:

[63] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A80 EZE (QM) v A80 EvoMab QM
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[64]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-37.52
Confidence interval	
level	95 %

upper limit	-29.9
Variability estimate	Standard error of the mean
Dispersion value	3.87

Notes:

[64] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R5 PBO Q2W v R5 EvoMab Q2W
Number of subjects included in analysis	171
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[65]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-59.61
Confidence interval	
level	95 %
sides	2-sided
lower limit	-64.73
upper limit	-54.48
Variability estimate	Standard error of the mean
Dispersion value	2.6

Notes:

[65] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab QM vs Placebo QM
Comparison groups	R5 PBO QM v R5 EvoMab QM
Number of subjects included in analysis	172
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[66]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-59.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-64.8
upper limit	-53.6
Variability estimate	Standard error of the mean
Dispersion value	2.83

Notes:

[66] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R40 PBO Q2W v R40 EvoMab Q2W
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[67]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-58.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	-64.6
upper limit	-51.94
Variability estimate	Standard error of the mean
Dispersion value	3.2

Notes:

[67] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab QM vs Placebo QM
Comparison groups	R40 PBO QM v R40 EvoMab QM
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[68]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-57.31

Confidence interval	
level	95 %
sides	2-sided
lower limit	-64.29
upper limit	-50.32
Variability estimate	Standard error of the mean
Dispersion value	3.53

Notes:

[68] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	S40 PBO Q2W v S40 EvoMab Q2W
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[69]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-60.06
Confidence interval	
level	95 %
sides	2-sided
lower limit	-65.18
upper limit	-54.94
Variability estimate	Standard error of the mean
Dispersion value	2.59

Notes:

[69] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab QM vs Placebo QM
Comparison groups	S40 PBO QM v S40 EvoMab QM
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[70]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-62.82
Confidence interval	
level	95 %
sides	2-sided
lower limit	-70.22
upper limit	-55.42
Variability estimate	Standard error of the mean
Dispersion value	3.75

Notes:

[70] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

## Statistical analyses

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A10 PBO Q2W v A10 EvoMab Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[85]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-58.49
Confidence interval	
level	95 %
sides	2-sided
lower limit	-63.1
upper limit	-53.89
Variability estimate	Standard error of the mean
Dispersion value	2.34

Notes:

[85] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Placebo QM
Comparison groups	A10 PBO QM v A10 EvoMab QM

Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[86]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-52.25
Confidence interval	
level	95 %
sides	2-sided
lower limit	-57.49
upper limit	-47.01
Variability estimate	Standard error of the mean
Dispersion value	2.66

Notes:

[86] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A10 EZE (Q2W) v A10 EvoMab Q2W
Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[87]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-33.66
Confidence interval	
level	95 %
sides	2-sided
lower limit	-38.33
upper limit	-28.98
Variability estimate	Standard error of the mean
Dispersion value	2.37

Notes:

[87] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A10 EZE (QM) v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[88]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-40.01

Confidence interval	
level	95 %
sides	2-sided
lower limit	-45.27
upper limit	-34.74
Variability estimate	Standard error of the mean
Dispersion value	2.67

Notes:

[88] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Placebo Q2W
Comparison groups	A80 PBO Q2W v A80 EvoMab Q2W
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[89]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-59.34
Confidence interval	
level	95 %
sides	2-sided
lower limit	-66.61
upper limit	-52.07
Variability estimate	Standard error of the mean
Dispersion value	3.69

Notes:

[89] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Placebo QM
Comparison groups	A80 PBO QM v A80 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[90]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-58.74
Confidence interval	
level	95 %
sides	2-sided
lower limit	-65.56
upper limit	-51.93
Variability estimate	Standard error of the mean
Dispersion value	3.46

Notes:

[90] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A80 EZE (Q2W) v A80 EvoMab Q2W
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[91]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-34.92
Confidence interval	
level	95 %
sides	2-sided
lower limit	-42.09
upper limit	-27.75
Variability estimate	Standard error of the mean
Dispersion value	3.64

Notes:

[91] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A80: Evolocumab QM vs Ezetimibe (QM)
Comparison groups	A80 EZE (QM) v A80 EvoMab QM
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[92]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-39.64
Confidence interval	
level	95 %
sides	2-sided
lower limit	-46.57
upper limit	-32.71
Variability estimate	Standard error of the mean
Dispersion value	3.52

Notes:

[92] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R5 PBO Q2W v R5 EvoMab Q2W
Number of subjects included in analysis	171
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[93]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-54.86

Confidence interval	
level	95 %
sides	2-sided
lower limit	-59.66
upper limit	-50.05
Variability estimate	Standard error of the mean
Dispersion value	2.43

Notes:

[93] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R5: Evolocumab QM vs Placebo QM
Comparison groups	R5 PBO QM v R5 EvoMab QM
Number of subjects included in analysis	172
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[94]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-56.14
Confidence interval	
level	95 %
sides	2-sided
lower limit	-60.66
upper limit	-51.61
Variability estimate	Standard error of the mean
Dispersion value	2.29

Notes:

[94] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	R40 PBO Q2W v R40 EvoMab Q2W
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[95]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-50.78
Confidence interval	
level	95 %
sides	2-sided
lower limit	-56.72
upper limit	-44.83
Variability estimate	Standard error of the mean
Dispersion value	3.01

Notes:

[95] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	R40: Evolocumab QM vs Placebo QM
Comparison groups	R40 PBO QM v R40 EvoMab QM
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[96]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-54.94
Confidence interval	
level	95 %
sides	2-sided
lower limit	-61.11
upper limit	-48.76
Variability estimate	Standard error of the mean
Dispersion value	3.12

Notes:

[96] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab Q2W vs Placebo Q2W
Comparison groups	S40 PBO Q2W v S40 EvoMab Q2W
Number of subjects included in analysis	168
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[97]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-55.34
Confidence interval	
level	95 %
sides	2-sided
lower limit	-59.94
upper limit	-50.74
Variability estimate	Standard error of the mean
Dispersion value	2.33

Notes:

[97] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	S40: Evolocumab QM vs Placebo QM
Comparison groups	S40 PBO QM v S40 EvoMab QM
Number of subjects included in analysis	170
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 <sup>[98]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-56.87

Confidence interval	
level	95 %
sides	2-sided
lower limit	-63.27
upper limit	-50.46
Variability estimate	Standard error of the mean
Dispersion value	3.24

Notes:

[98] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

lower limit	2.66
upper limit	10.99
Variability estimate	Standard error of the mean
Dispersion value	2.11

Notes:

[295] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab QM vs Placebo QM
Comparison groups	A10 PBO QM v A10 EvoMab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.017 <sup>[296]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	7.87
Confidence interval	
level	95 %
sides	2-sided
lower limit	3.01
upper limit	12.73
Variability estimate	Standard error of the mean
Dispersion value	2.46

Notes:

[296] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

<b>Statistical analysis title</b>	A10: Evolocumab Q2W vs Ezetimibe (Q2W)
Comparison groups	A10 EZE (Q2W) v A10 EvoMab Q2W

Number of subjects included in analysis	166
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.001 <sup>[297]</sup>
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	8.81
Confidence interval	
level	95 %
sides	2-sided
lower limit	4.58
upper limit	13.03
Variability estimate	Standard error of the mean
Dispersion value	2.14

Notes:

[297] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

[308] - The model included treatment group, stratification factors, scheduled visit and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the first dose of blinded investigational product until the end of the study (up to 14 weeks).

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.0
--------------------	------

### Reporting groups

Reporting group title	A10 PBO Q2W
-----------------------	-------------

Reporting group description:

Participants received atorvastatin 10 mg once daily during the 4 week lipid stabilization period and then in combination with placebo (PBO) subcutaneous injection once every 2 weeks (Q2W) and placebo tablets once daily for up to 12 weeks.

Reporting group title	A10 PBO QM
-----------------------	------------

Reporting group description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month (QM) and placebo tablets once a day for up to 12 weeks.

Reporting group title	A10 EZE (Q2W)
-----------------------	---------------

Reporting group description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe (EZE) orally once a day for up to 12 weeks.

Reporting group title	A10 EZE (QM)
-----------------------	--------------

Reporting group description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.

Reporting group title	A10 EvoMab Q2W
-----------------------	----------------

Reporting group description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab (EvoMab) by subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.

Reporting group title	A10 EvoMab QM
-----------------------	---------------

Reporting group description:

Participants received atorvastatin 10 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.

Reporting group title	A80 PBO Q2W
-----------------------	-------------

Reporting group description:

Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.

Reporting group title	A80 PBO QM
-----------------------	------------

Reporting group description:

Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month and placebo tablets once a day for up to 12 weeks.

Reporting group title	A80 EZE (Q2W)
-----------------------	---------------

Reporting group description:

Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks and 10 mg ezetimibe orally once a day for up to 12 weeks.

Reporting group title	A80 EZE (QM)
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once a month and 10 mg ezetimibe orally once a day for up to 12 weeks.	
Reporting group title	A80 EvoMab Q2W
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.	
Reporting group title	A80 EvoMab QM
Reporting group description: Participants received atorvastatin 80 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.	
Reporting group title	R5 PBO Q2W
Reporting group description: Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	R5 PBO QM
Reporting group description: Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.	
Reporting group title	R5 EvoMab Q2W
Reporting group description: Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	R5 EvoMab QM
Reporting group description: Participants received rosuvastatin 5 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.	
Reporting group title	R40 PBO Q2W
Reporting group description: Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	R40 PBO QM
Reporting group description: Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.	
Reporting group title	R40 EvoMab Q2W
Reporting group description: Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	R40 EvoMab QM
Reporting group description: Participants received rosuvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.	
Reporting group title	S40 PBO Q2W
Reporting group description: Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	S40 PBO QM
Reporting group description: Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with placebo subcutaneous injection once every month for up to 12 weeks.	

Reporting group title	S40 EvoMab Q2W
Reporting group description:	
Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.	
Reporting group title	S40 EvoMab QM
Reporting group description:	
Participants received simvastatin 40 mg a day during the 4-week lipid stabilization period and then in combination with 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 August 2012	<ul style="list-style-type: none"><li>- added testing for prior or existing HCV infection in high risk individuals and evaluation of viral load in those who showed evidence thereof</li><li>- clarified that subjects with known sensitivity to the 'active substances or their excipients' were excluded</li><li>- added urine pregnancy testing at day 1, week 4, and week 8 for women of childbearing potential</li></ul>
10 October 2012	<ul style="list-style-type: none"><li>- added the LAPLACE-2 study acronym and short title</li><li>- included a lipid stabilization period for background statin therapy</li><li>- added new evolocumab formulation and autoinjectors to allow administration of investigational product in a home-use setting, revised schedule of assessment and description of procedures to replace week 4 and 6 visits with home-use IP administration, added reporting requirements for product/device complaints</li><li>- updated program status in evolocumab background section</li><li>- provide instruction regarding missed ezetimibe doses</li><li>- added subjects with a history of HCV infection to the HCV antibody testing and viral load monitoring, if positive</li><li>- updated sections on collection and reporting of adverse events and serious adverse events, including adding device-related AEs, and the serious adverse event contingency form</li><li>- move change from baseline in VLDL-C at week 12 from tertiary to secondary endpoints</li><li>- added transient ischemic attacks and non-coronary revascularization as exploratory endpoints</li><li>- implemented minor clarifications and error corrections</li></ul>
10 December 2012	<ul style="list-style-type: none"><li>- added the LDL-C endpoint of mean percent change from baseline at weeks 10 and 12 as a co-primary endpoint</li><li>- added the means of weeks 10 and 12 as co-secondary endpoints to all secondary endpoints</li><li>- added an alert threshold for elevated triglycerides</li><li>- added publication references for primary result publications of phase 2 studies MENDEL and LAPLACE</li><li>- introduce the simplified terminology of once-monthly (QM) dosing</li><li>- implemented minor clarifications and error corrections</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
