Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 December 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 December 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the effect of 12 weeks of evolocumab subcutaneous (SC) every other week (EOW) and once monthly (QM), compared with placebo, on percent change from baseline in low-density lipoprotein cholesterol (LDL-C) in subjects with heterozygous familial hypercholesterolemia (HeFH).

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations and guidelines, and Food and Drug Administration (FDA) regulations, and guidelines set forth in 21 CFR Parts 11, 50, 54, 56, and 312.

All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 February 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 55
Country: Number of subjects enrolled	United States: 19
Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Netherlands: 50
Country: Number of subjects enrolled	Norway: 15
Country: Number of subjects enrolled	Spain: 36
Country: Number of subjects enrolled	Sweden: 15
Country: Number of subjects enrolled	Switzerland: 14
Country: Number of subjects enrolled	United Kingdom: 17
Country: Number of subjects enrolled	Australia: 14
Country: Number of subjects enrolled	Hong Kong: 10
Country: Number of subjects enrolled	New Zealand: 12
Country: Number of subjects enrolled	South Africa: 41

Worldwide total number of subjects	331
EEA total number of subjects	166

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	282
From 65 to 84 years	49
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Men and women 18 to 80 years old with a diagnosis of heterozygous familial hypercholesterolemia (HeFH) on stable doses of an approved statin with fasting low-density lipoprotein cholesterol (LDL-C) \geq 100 mg/dL were eligible for this study. The first participant enrolled on 07 February 2013 and the last participant enrolled 03 September 2013.

Pre-assignment

Screening details:

Participants received subcutaneous placebo corresponding to the once monthly dose volume during a 6-week screening period. Those who completed the screening period and met final eligibility criteria were randomized 1:1:2:2 into 4 treatment groups. Randomization was stratified by LDL-C level (< 160 mg/dL vs ≥ 160 mg/dL) and ezetimibe use.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo Q2W

Arm description:

Participants received placebo subcutaneous injection once every 2 weeks (Q2W) for up to 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered by subcutaneous injection

Arm title	Placebo QM
------------------	------------

Arm description:

Participants received placebo subcutaneous injection once every month (QM) for up to 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to Evolocumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered by subcutaneous injection

Arm title	Evolocumab Q2W
------------------	----------------

Arm description:

Participants received 140 mg evolocumab by subcutaneous injection once every 2 weeks for up to 12 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	Repatha
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use
Dosage and administration details:	
Administered by subcutaneous injection	
Arm title	Evolocumab QM

Arm description:

Participants received 420 mg evolocumab by subcutaneous injection once a month for up to 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	Repatha
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered by subcutaneous injection

Statistical analyses

Statistical analysis title	Evolocumab Q2W vs Placebo Q2W
Comparison groups	Placebo Q2W v Evolocumab Q2W
Number of subjects included in analysis	164
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 ^[35]
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-19.59
Confidence interval	
level	95 %
sides	2-sided
lower limit	-27.92
upper limit	-11.26
Variability estimate	Standard error of the mean
Dispersion value	4.22

Notes:

[35] - The model includes treatment group, baseline LDL-C and ezetimibe use, scheduled visit, and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

Statistical analysis title	Evolocumab QM vs Placebo QM
Comparison groups	Placebo QM v Evolocumab QM
Number of subjects included in analysis	165
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.001 ^[36]
Method	Repeated measures linear effects model
Parameter estimate	LS Mean Treatment Difference
Point estimate	-11.56
Confidence interval	
level	95 %
sides	2-sided
lower limit	-21.38
upper limit	-1.74
Variability estimate	Standard error of the mean
Dispersion value	4.97

Notes:

[36] - The model includes treatment group, baseline LDL-C and ezetimibe use, scheduled visit, and the interaction of treatment with scheduled visit. Multiplicity adjusted p-value is significant if less than the familywise error rate of 0.05.

Reporting groups

Reporting group title	Placebo Q2W
-----------------------	-------------

Reporting group description:

Participants received placebo subcutaneous injection once every 2 weeks (Q2W) and placebo tablets once a day for up to 12 weeks.

Reporting group title	Placebo QM
-----------------------	------------

Reporting group description:

Participants received placebo subcutaneous injection once every month (QM) and placebo tablets once a day for up to 12 weeks.

Reporting group title	Evolocumab Q2W
-----------------------	----------------

Reporting group description:

Participants received 140 mg evolocumab by subcutaneous injection once every 2 weeks and placebo tablets once a day for up to 12 weeks.

Reporting group title	Evolocumab QM
-----------------------	---------------

Reporting group description:

Participants received 420 mg evolocumab by subcutaneous injection once a month and placebo tablets once a day for up to 12 weeks.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 August 2012	<ul style="list-style-type: none">- added testing for prior or existing HCV infection in high risk individuals and evaluation of viral load in those who show evidence thereof- clarified that subjects with known sensitivity to the "active substances or the excipients" were excluded- added urine pregnancy testing at day 1, week 4, and week 8 for women of childbearing potential- implemented minor error corrections
10 October 2012	<ul style="list-style-type: none">- added the RUTHERFORD-2 study acronym and short title- added new evolocumab formulation and autoinjectors to allow administration of investigational product in a home-use setting- revised schedule of assessment and description of procedures in Section 7 to replace weeks 4 and 6 visits with home-use IP administration- added reporting requirements for product/device complaints- updated program status in evolocumab background section- added subjects with a history of HCV infection to the HCV antibody testing and viral load monitoring, if positive- updated sections on collection and reporting of adverse events and serious adverse events, including adding device related adverse events, and the serious adverse event contingency form- moved change from baseline in VLDL-C at week 12 from tertiary to secondary endpoints- added transient ischemic attacks and non-coronary revascularization as exploratory endpoints- made other minor clarifications and error corrections
10 December 2012	<ul style="list-style-type: none">- added the LDL-C endpoint of mean percent change from baseline at weeks 10 and 12 as a co-primary endpoint- added the means of weeks 10 and 12 as co-secondary endpoints to all secondary endpoints- added alert threshold for elevated triglycerides- added publication references for primary result publications of phase 2 studies MENDEL and LAPLACE- introduced simplified terminology of QM dosing- made other minor clarifications and error corrections

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
