Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 January 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 November 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the effect of treatment with evolocumab, compared with placebo, on the risk for cardiovascular death, myocardial infarction, stroke, hospitalization for unstable angina, or coronary revascularization, whichever occurs first, in patients with clinically evident cardiovascular disease.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines.

All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study and all amendments were reviewed by an independent ethics committees (IEC) or institutional review board (IRB) at each center.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 February 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	15310
From 65 to 84 years	12225
85 years and over	29

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 1242 clinical centers in 49 countries in the regions of Europe (62.9%), North America (16.6%), Asia Pacific (13.9%), and Latin America (6.6%) from 08 February 2013 to 05 June 2015.

Pre-assignment

Screening details:

Eligible participants were randomized in a 1:1 ratio to receive either subcutaneous (SC) evolocumab or placebo. Randomization was stratified by the final screening low-density lipoprotein cholesterol (LDL-C) level (< 85 mg/dL vs ≥ 85 mg/dL) and by geographical region.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo subcutaneous injections either once every 2 weeks (Q2W) or once a month (QM) according to their own preference.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered subcutaneously using a spring-based prefilled 1.0 mL autoinjector/pen.

Arm title	Evolocumab
------------------	------------

Arm description:

Participants received evolocumab subcutaneous injections either 140 mg Q2W or 420 mg QM according to their own preference.

Arm type	Experimental
Investigational medicinal product name	Evolocumab
Investigational medicinal product code	AMG 145
Other name	Repatha
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered subcutaneously at 140 mg Q2W or 420 mg QM using a spring-based prefilled 1.0 mL autoinjector/pen.

Number of subjects in period 1	Placebo	Evolocumab
Started	13780	13784
Received Treatment	13756	13769
Completed	13662	13691
Not completed	118	93
Consent withdrawn by subject	105	88
Lost to follow-up	13	5

Primary: Time to Cardiovascular Death, Myocardial Infarction, Hospitalization for Unstable Angina, Stroke, or Coronary Revascularization

End point title	Time to Cardiovascular Death, Myocardial Infarction, Hospitalization for Unstable Angina, Stroke, or Coronary Revascularization
End point description:	
All deaths and potential endpoint events were adjudicated by an independent external Clinical Events Committee (CEC) led by the Thrombolysis in Myocardial Infarction (TIMI) Study Group, using standardized definitions based on the "Standardized Definitions for Cardiovascular and Stroke End Point Events in Clinical Trials and the Third Universal Definition of Myocardial Infarction". Time to cardiovascular death, myocardial infarction, stroke, hospitalization for unstable angina, or coronary revascularization was defined as the time from randomization to the first occurrence of any component of the composite endpoint and was analyzed using Kaplan-Meier (KM) survival analysis. KM estimates of the percentage of participants with an event are reported. Participants with no event were censored based on last non-fatal potential endpoint collection date.	
End point type	Primary
End point timeframe:	
Events that occurred from randomization to the last confirmed survival status date; the median duration of follow-up was 26 months. KM estimates at 6, 12, 18, 24, 30 and 36 months are reported.	

End point values	Placebo	Evolocumab

Secondary: Time to First Myocardial Infarction

End point title	Time to First Myocardial Infarction
-----------------	-------------------------------------

End point description:

All deaths and potential endpoint events were adjudicated by an independent external CEC led by the TIMI Study Group, using standardized definitions based on the "Standardized Definitions for Cardiovascular and Stroke End Point Events in Clinical Trials and the Third Universal Definition of Myocardial Infarction". The diagnosis of myocardial infarction required the combination of:

- Evidence of myocardial necrosis (either changes in cardiac biomarkers or post-mortem pathological findings); and
- Supporting information derived from the clinical presentation, electrocardiographic changes, or the results of myocardial or coronary artery Imaging.

Time to first myocardial infarction was defined as the time from randomization to the date of the first MI and was analyzed using Kaplan-Meier survival analysis. KM estimates of the percentage of participants with an event are reported. Participants with no event were censored based on last non-fatal potential endpoint collection date.

End point type	Secondary

Statistical analyses

Statistical analysis title	Primary Analysis
-----------------------------------	------------------

Statistical analysis description:

If the primary, key secondary, and endpoint of cardiovascular death reached a statistical significance level of 0.05, then the endpoint of all-cause death was tested at a significance level of 0.04 and remaining secondary endpoints were tested at an overall significance level of 0.01 by applying the Hochberg method.

The hazard ratio is based on a Cox model stratified by the randomization stratification factors (final screening LDL-C level and region).

Secondary: Time to First Coronary Revascularization

End point title	Time to First Coronary Revascularization
-----------------	--

End point description:

All deaths and potential endpoint events were adjudicated by an independent external CEC led by the TIMI Study Group, using standardized definitions based on the "Standardized Definitions for Cardiovascular and Stroke End Point Events in Clinical Trials and the Third Universal Definition of Myocardial Infarction". Time to first coronary revascularization was defined as the time from randomization to the date of the coronary revascularization and was analyzed using Kaplan-Meier (KM) survival analysis. KM estimates of the percentage of participants with an event are reported. Participants with no event were censored based on last non-fatal potential endpoint collection date.

End point type	Secondary

Secondary: Time to Cardiovascular Death or First Hospitalization for Worsening Heart Failure

End point title	Time to Cardiovascular Death or First Hospitalization for Worsening Heart Failure
-----------------	---

End point description:

All events were adjudicated by an independent external CEC led by the TIMI Study Group using standardized definitions. HF hospitalization was defined as an event that met all of the following criteria:

1. Admitted to hospital with a primary diagnosis of HF
2. In hospital for at least 24 hours

3. Documented new or worsening symptoms due to HF, including at least 1 of the following:
 - Dyspnea
 - Decreased exercise tolerance
 - Fatigue
 - Other symptoms of worsened end-organ perfusion or volume overload
 4. Evidence of new or worsening HF consisting of at least 2 physical exam findings or 1 physical exam finding and at least 1 laboratory criterion
 5. Received new or increased treatment for HF.
- Time to CV death or first hospitalization for worsening HF was defined as the time from randomization to the first occurrence of any component of the endpoint analyzed using KM analysis. Participants with no event were censored based on last non-fatal potential endpoint collection date.

End point type	Secondary

Secondary: Time to First Ischemic Fatal or non-Fatal Stroke or Transient Ischemic Attack

End point title	Time to First Ischemic Fatal or non-Fatal Stroke or Transient Ischemic Attack
-----------------	---

End point description:

All deaths and potential endpoint events were adjudicated by an independent external CEC led by the TIMI Study Group, using standardized definitions. Ischemic stroke was defined as an acute episode of focal cerebral, spinal, or retinal dysfunction caused by infarction of central nervous system tissue. Transient ischemic attack (TIA) was defined as a transient episode of focal neurological dysfunction caused by brain, spinal cord, or retinal ischemia, without acute infarction. Time to first ischemic fatal or non-fatal stroke or TIA was defined as the time from randomization to the first occurrence of any component of the endpoint and was analyzed using KM survival analysis. KM estimates of the percentage of participants with an event are reported. Participants with no event were censored based on last non-fatal potential endpoint collection date.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first dose of study drug to the end of study. The median duration of follow-up was 26 months.

Adverse event reporting additional description:

Deaths by any cause were adjudicated efficacy endpoints in this study and were summarized as a secondary endpoint. Events that were negatively adjudicated (did not meet the definitions of an endpoint), were reclassified as an adverse event or serious adverse event.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 September 2012	<ul style="list-style-type: none">• add testing for prior or existing Hepatitis C virus (HCV) infection in high risk individuals and monitoring of viral load in those who show evidence thereof• add the exclusion of family history of hereditary muscular disorders• add instruction that investigators will ask study subjects to promptly report muscle pain, cramps, or weakness especially if accompanied by malaise or fever and provide further detail regarding stopping rules for atorvastatin and investigational product in case of elevated creatine kinase levels• provide guidance regarding actions to take if the subject requires treatment with a strong CYP3A4 inhibitor while on study• add baseline electrocardiogram (ECG) in triplicate for all subjects, not just at sites provided with centralized ECG services equipment• add a description of composition and role of the Clinical Events Committee (CEC)• add serum pregnancy testing at the randomization visit (day 1) for women of childbearing potential• add ezetimibe use at baseline to covariates
24 September 2012	<ul style="list-style-type: none">• add study name FOURIER• add phase 3 formulation information for IP and introduce the prefilled autoinjector/pen for administration of the IP• modify Schedule of Assessments for reduced visit frequency and IP administration by autoinjector/pen at locations external to study center• prolong the time investigators are not to perform non-protocol testing of blinded analytes to 12 weeks after last IP administration or end of study, whichever is later• provide more specificity about adjudicated clinical events• add information about the study Executive Committee and Lipid Monitoring Committee• add reporting requirements for product/device complaints• replace routine visits with administration of IP external to the study center• extend maximal duration of screening from 12 to 15 weeks• add HCV testing at enrollment and evaluation of viral load during the study, if positive, for subjects with a history of HCV infection• increase planned sites to 1000• clarify definition of metabolic syndrome in inclusion criteria• add homozygous familial hypercholesterolemia and LDL or plasma apheresis within 12 months to exclusions• add Israel and Australasia• clarify that all cause death, MI, stroke, revascularization, hospitalization for unstable angina, hospitalization for HF, and TIA are not considered SAEs in this study, but will be handled as efficacy endpoints• clarify that Amgen will review all fatal endpoints to evaluate whether the cause of death is due to a SAE that is a specific concern for a protein therapeutic or which may be individually informative. If detected, Amgen will notify the investigator to submit a SAE eCRF within 24 hours of Amgen's notification.• change time to first hospitalization for worsening HF secondary endpoint to composite endpoint of time to CV death or hospitalization for HF• add secondary endpoint of time to ischemic fatal or non-fatal stroke or TIA• modify lab assessment schedule, including collection biomarker samples

12 December 2012	<ul style="list-style-type: none"> • clarify that the reporting process for potential endpoints and the information collected corresponds to the requirements and the information collected for serious adverse events • clarify that the physical exam should include a neurological exam • increase the upper age limit to 85 years from 80 years • add notification of the investigator if triglycerides are > 1000 mg/dL • add collection of the reason why subjects switch investigational product administration regimen • add alert threshold for elevated triglycerides • add measurement of urine microalbumin at week 48 and end of study
16 July 2013	<ul style="list-style-type: none"> • allow statins other than atorvastatin for background lipid lowering therapy • redefine the acceptable lipid therapy, including changes in allowed lipid therapy other than statins • include symptomatic peripheral arterial disease as evidence of cardiovascular disease • minor modifications of the risk factors for eligibility • add the automated mini doser (also referred to as the 3.5 mL personal injector) to the investigational product administration devices • increase the number of study centers • allow QM dosing from initiation of IP administration • add option of an informed consent for screening and lipid therapy titration only • update the section on withdrawal from treatment • update sections on adverse event and serious adverse event reporting
28 August 2014	<ul style="list-style-type: none"> • increase enrollment from approximately 22,500 to up to approximately 27,500 randomized subjects • update key sponsor contact information • add the product name evolocumab
29 September 2015	<ul style="list-style-type: none"> • add the major components of the primary objective and endpoint as separate secondary objectives and endpoints • revise statistical testing to account for the additional secondary endpoints • add adjudication of new onset diabetes. • revise section on prohibited treatments during the study to account for recent results of another trial (IMPROVE-IT) and enable addition of ezetimibe in subjects experiencing an acute coronary syndrome during the study. Ezetimibe was not prohibited prior to this amendment, as long as subjects were on stable doses at the time of randomization. • add HbA1c to blood draws at week 24 and Q24W visit to assist detection of new onset diabetes. • revise end-of-study procedures to enable more flexibility for sites to schedule end-of-study visits and add a safety contact at 30 days after last administration of IP if the end-of-study visit is less than 30 days after last IP. • add text for the collection of vital status information.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
