#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 July 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 March 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare the efficacy of a new formulation of insulin glargine (HOE901-U300) and Lantus (overall, regardless the injection time) in terms of change of HbA1c from baseline to endpoint (scheduled Month 6) in subjects with type 1 diabetes mellitus.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 September 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 17
Country: Number of subjects enrolled	Sweden: 6
Country: Number of subjects enrolled	Czech Republic: 2
Country: Number of subjects enrolled	Denmark: 26
Country: Number of subjects enrolled	Estonia: 24
Country: Number of subjects enrolled	Finland: 17
Country: Number of subjects enrolled	Hungary: 14
Country: Number of subjects enrolled	Latvia: 16
Country: Number of subjects enrolled	Canada: 22
Country: Number of subjects enrolled	Japan: 46
Country: Number of subjects enrolled	Romania: 29
Country: Number of subjects enrolled	United States: 330
Worldwide total number of subjects	549
EEA total number of subjects	151

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	494
From 65 to 84 years	54
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 846 subjects were screened, of whom 297 subjects were screen failure and 549 subjects were randomized.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	HOE901-U300

Arm description:

HOE901-U300 for 12 months on top of mealtime insulin analogue.

Arm type	Experimental
Investigational medicinal product name	Insulin glargine - new formulation
Investigational medicinal product code	HOE901-U300
Other name	
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

HOE901-U300 (new insulin glargine 300 units per milliliter [U/mL]) once daily in morning or evening. Dose titration seeking fasting plasma glucose 4.4-5.6 millimole per liter (mmol/L) (80 - 100 milligram per deciliter [mg/dL]).

<b>Arm title</b>	Lantus
------------------	--------

Arm description:

Lantus for 12 months on top of mealtime insulin analogue.

Arm type	Active comparator
Investigational medicinal product name	Insulin glargine
Investigational medicinal product code	HOE901-U100
Other name	Lantus
Pharmaceutical forms	Solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

Lantus (HOE901-U100, insulin glargine 100 U/mL) once daily in morning or evening. Dose titration seeking fasting plasma glucose 4.4-5.6 mmol/L (80 - 100 mg/dL).

<b>Number of subjects in period 1</b>	HOE901-U300	Lantus
Started	274	275
Modified Intent-to-Treat Population	273	273
Completed	219	225
Not completed	55	50
Adverse Event	5	4
Perceived Lack of Efficacy	1	1
Selection Criterion/Protocol Violation	7	5
Serious Adverse Event of Hypoglycemia	-	1
Protocol Violation	13	6
Nonserious Hypoglycemia	-	3
Personal Reason	17	25
Lost to follow-up	5	-
Possibly Hypoglycemia	1	-
Site Closure/Site Withdrawal	1	3
Lack of efficacy	5	2

## Baseline characteristics

### Reporting groups

Reporting group title	HOE901-U300
Reporting group description: HOE901-U300 for 12 months on top of mealtime insulin analogue.	

Reporting group title	Lantus
Reporting group description: Lantus for 12 months on top of mealtime insulin analogue.	

Reporting group values	HOE901-U300	Lantus	Total
Number of subjects	274	275	549
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	46.4	48.2	
standard deviation	± 13.9	± 13.4	-
Gender categorical			
Units: Subjects			
Female	125	111	236
Male	149	164	313
Glycated Hemoglobin (HbA1c)			
Units: Subjects			
Less Than (<) 8%	105	105	210
Greater Than or Equal to (>=) 8%	169	170	339
Body Mass Index (BMI)			
Units: kilogram per square meter (kg/m <sup>2</sup> )			
arithmetic mean	27.6	27.6	
standard deviation	± 5.5	± 4.7	-
Duration of Diabetes			
Number of subjects analyzed for this baseline characteristics = 274 and 272 for each reporting group, respectively.			
Units: years			
arithmetic mean	20.5	21.4	
standard deviation	± 12.7	± 13.1	-
Basal Insulin Daily Dose			
Number of subjects analyzed for this baseline characteristics = 201 and 210 for each reporting group, respectively.			
Units: units per kilogram (U/kg)			
arithmetic mean	0.381	0.372	
standard deviation	± 0.173	± 0.152	-
Total Insulin Daily Dose			
Number of subjects analyzed for this baseline characteristics = 195 and 198 for each reporting group, respectively.			
Units: U/kg			
arithmetic mean	0.714	0.724	
standard deviation	± 0.278	± 0.245	-

## End points

### End points reporting groups

Reporting group title	HOE901-U300
Reporting group description: HOE901-U300 for 12 months on top of mealtime insulin analogue.	
Reporting group title	Lantus
Reporting group description: Lantus for 12 months on top of mealtime insulin analogue.	

### Primary: Change In HbA1c From Baseline to Month 6 Endpoint

End point title	Change In HbA1c From Baseline to Month 6 Endpoint
End point description: Modified Intent-to-Treat (mITT) population: all randomized subjects who received at least ( $\geq$ )1 dose, had baseline and $\geq 1$ post-baseline assessment of any efficacy variable, irrespective of compliance. Number of subjects analyzed = subjects with baseline and Month 6 HbA1c assessment.	
End point type	Primary
End point timeframe: Baseline, Month 6	

End point values	HOE901-U300	Lantus		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	225	229		
Units: percentage of hemoglobin				
least squares mean (standard error)	-0.4 ( $\pm$ 0.051)	-0.44 ( $\pm$ 0.051)		

### Statistical analyses

Statistical analysis title	HOE901-U300 vs. Lantus
Statistical analysis description: Analysis was performed using mixed model for repeated measurements (MMRM) with treatment groups, strata of screening HbA1c ( $<8.0$ , $\geq 8.0\%$ ), geographical region (Non-Japan; Japan), visit and visit-by-treatment groups interaction as fixed categorical effects; baseline HbA1c and baseline HbA1c-by-visit interaction as continuous fixed covariates.	
Comparison groups	HOE901-U300 v Lantus
Number of subjects included in analysis	454
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
Parameter estimate	Least Squares (LS) Mean difference
Point estimate	0.04

Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.098
upper limit	0.185
Variability estimate	Standard error of the mean
Dispersion value	0.072

Notes:

[1] - Stepwise closed testing approach was used to assess non-inferiority and superiority sequentially:

1. Non-inferiority of HOE901-U300 vs Lantus: Upper bound of two-sided 95% confidence interval (CI) of difference between HOE901-U300 and Lantus on mITT population is <0.4%.
2. Superiority (only if non-inferiority has been demonstrated): Upper bound of two-sided 95% CI for difference in mean change in HbA1c from baseline to endpoint between HOE901-U300 and Lantus on mITT population is <0.

## Statistical analyses

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of informed consent form up to study completion regardless of seriousness or relationship to study drug.

Adverse event reporting additional description:

Reported adverse events and deaths are treatment-emergent that is AEs that developed/worsened and death that occurred during on-treatment period (as the time from first injection of IMP up to 2 days after the last injection of IMP). Analysis was done on safety population.

Assessment type	Systematic

subjects affected / exposed	26 / 275 (9.45%)	38 / 274 (13.87%)	
occurrences (all)	39	49	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 August 2013	<p>- Route and method of investigational medicinal product (IMP) administration – clarification of the definition of injection area and injection site within that area. - Timing of IMP injection – clarification of the window for timing of IMP injections. - Adjustment of IMP – clarification of titration beyond 6 to 8 weeks. - Non-investigational medicinal product (NIMP) – emphasis of the need to avoid daytime hypoglycemia, specific guidance on when to begin optimization of the mealtime insulin dose, recording of all doses of mealtime insulin analog. - Review of severe hypoglycemia classification by external Review Board – all hypoglycemia events reported by Investigator as severe and/or reported as serious adverse events (SAEs) were to be independently reviewed by a Severe Hypoglycemia Review Board (SHRB) blinded to treatment arm. This was to ensure consistent use of the severe hypoglycemia classification according to American Diabetes Association definition across the study. Both the Investigators' classification and the Review Board's assessment were to be reported. - Screening period – clarification that screening period could be extended from 2 to 3 weeks. - SMPG and change to the scope of data recorded into the electronic case report form upon phone call visits – clarification of documentation of SMPG. Furthermore, in order to reduce burden to subjects and minimize potential for transcription errors, the amount of SMPG data to be collected during phone call visits was reduced to the minimum required for the IMP dose adjustment. However, the remaining SMPG as well as IMP and mealtime insulin dose data of the week prior to the phone call visits recorded by the subject in the diary, were collected at the subsequent on-site visits. - Reporting of SAE and adverse events of special interest (AESI) – clarification of the process of SAE and AESI reporting.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
