

Clinical trial results:

The role of pre-emptive analgesia with Qutenza (topical capsaicin 8%) in preventing neuropathic pain following lower limb amputation: a pilot randomised controlled study

Summary

EudraCT number	2012-001587-30
Trial protocol	GB
Global end of trial date	12 April 2017

Results information

Result version number	v1 (current)
This version publication date	19 January 2020
First version publication date	19 January 2020

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	12 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 April 2017
Global end of trial reached?	Yes
Global end of trial date	12 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Does the pre-operative application of topical Qutenza (capsaicin 8%) to patients undergoing amputation reduce chronic nerve pain at 12 weeks post-operatively?

Protection of trial subjects:

Patients all underwent verbal and written consent.

All patients were treated whilst inpatients in the Vascular ward at either Queen Elizabeth University Hospital or Western Infirmary, Glasgow. Regular review by study team day 1,3,7 post-application of the drug and review of the treatment site. Single application of the drug.

Small research team were aware of safety of all research participants throughout the trial.

Patients were given a Patient Alert Card to permit identification as a trial participant if required.

SAE reporting in place and unblinding procedure in the event of serious reaction.

Safety precautions and protocol for administration of the study drug/placebo and training of the research team in safe application of the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 June 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 30
Worldwide total number of subjects	30
EEA total number of subjects	30

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	8
From 65 to 84 years	22
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited from the Department of Vascular Surgery at the Western Infirmary and Queen Elizabeth University Hospitals, Glasgow between 25th June 2014 and 11th January 2017. Potential participants were identified by a member of the clinical or research team and a verbal referral made. 30 patients were recruited.

Pre-assignment

Screening details:

40 patients were screened for participation. 8 were excluded as they did not meet inclusion criteria - unable to provide consent (2), surgery planned <24 hours from screening visit (2), traumatic amputation (1), open wound at site of intended treatment (1). 2 patients declined to participate.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Blinding implementation details:

A single treatment was required for each patient in the study. The patient was blinded by applying a sheet across the treatment area.

Placebo patch and gel-Tegaderm/ Aquagel used as placebo and the application process was repeated identically for both treatment arms.

Clinical team were unaware of the treatment allocation.

Unblinding envelopes were held and patients given Patient Alert Cards in case need for unblinding.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment

Arm description:

Single application of Qutenza

Arm type	Experimental
Investigational medicinal product name	Qutenza (topical capsaicin 8%)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Transdermal solution
Routes of administration	Transdermal use

Dosage and administration details:

Each 280cm² Qutenza® patch contains 179mg of capsaicin. Patients could be treated with a maximum of 4 patches (716g of capsaicin)/control patches. The exact dose administered was determined by the size of the area to be treated.

Arm title	Control
------------------	---------

Arm description:

Single application of placebo (Tegaderm) patch

Arm type	Placebo
Investigational medicinal product name	Tegaderm
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cutaneous patch
Routes of administration	Cutaneous use

Dosage and administration details:

Single application. As required to replicate Qutenza treatment

Number of subjects in period 1	Treatment	Control
Started	15	15
Completed	12	15
Not completed	3	0
Adverse event, serious fatal	1	-

occurrences causally related to treatment / all	0 / 0	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Treatment (Qutenza)	Control (placebo)	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	4 / 15 (26.67%)	1 / 15 (6.67%)	
Skin and subcutaneous tissue disorders			
Erythema	Additional description: Mild erythema following removal of the patch was reported in 5 patients (4 in the treatment arm and 1 in the control arm). By the day of surgery, one patient in the treatment arm still had mild erythema. Otherwise there were no significant skin react		
alternative assessment type: Non-systematic			
subjects affected / exposed	4 / 15 (26.67%)	1 / 15 (6.67%)	
occurrences (all)	4	1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 May 2015	Change of CI/PI from Emma Aitken to David Kingsmore due to relocation.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This was a small pilot study. Qutenza safe in this patient cohort but no benefit in pain scores demonstrated. Logistically difficult to undertake in emergent patients. Lack of blinding of study team potential source of bias.

Notes:
