Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	21 October 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 October 2016
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To gain better understanding of the safety profile of trastuzumab emtansine in this study the safety and tolerability of trastuzumab emtansine was investigated in human epidermal growth factor receptor 2 (HER2)-positive locally advanced breast cancer (LABC) and metastatic breast cancer (mBC) patients who had received prior anti-HER2 and chemotherapy-based treatment.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1630
From 65 to 84 years	369
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

The last subject enrolled into Cohort 1 initiated treatment on October 21, 2014. Enrollment into Cohort 2 (subjects only of Asian race) began around the time of the end of enrollment into Cohort 1. Cohort 2 was still in the clinical phase at the time of this report.

Pre-assignment

Screening details:

Subjects with HER2-positive disease with invasive breast cancer and prior treatment (both chemotherapy, alone or with another agent, and an anti-HER2 agent, alone or with another agent) with disease progression during or after the most recent treatment for LABC/mBC or within 6 months of completing adjuvant therapy were included in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Trastuzumab Emtansine (All Subjects)
-----------	--------------------------------------

Arm description:

This cohort (Cohort 1) enrolled all subjects with human epidermal growth factor receptor 2 (HER2) positive, unresectable, locally advanced breast cancer (LABC) or metastatic breast cancer (mBC) who had received prior anti-HER2 and chemotherapy treatment and had progressed on or after the most recent treatment for LABC or mBC, or within 6 months of completing adjuvant therapy. Subjects received trastuzumab emtansine every 3 weeks until unacceptable toxicity, withdrawal of consent, or disease progression.

Arm type	Experimental
Investigational medicinal product name	Trastuzumab emtansine
Investigational medicinal product code	
Other name	RO5304020, T-DM1, Kadcyla,
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received trastuzumab emtansine 3.6 milligrams per kilogram (mg/kg) intravenously (IV) on Day 1 of a 3-week cycle every 3 weeks until unacceptable toxicity, withdrawal of consent, or disease progression.

Number of subjects in period 1	Trastuzumab Emtansine (All Subjects)
Started	2003
Completed	494
Not completed	1509
Termination by Sponsor	4
Cumulative Toxicity	1
Withdrew Consent	177
Safety Follow-up Close to Data Cut Off	9

Adverse Event	1
On Study Drug at Last Patient/Last Visit	93
Investigator Decision	5
Serious Adverse Event	1
Upper Gastrointestinal Bleeding	1
Death	1067
Progressive Disease	3
Visit Not Completed	1
Lost to follow-up	144
Protocol deviation	2

End points

End points reporting groups

Reporting group title	Trastuzumab Emtansine (All Subjects)
Reporting group description: This cohort (Cohort 1) enrolled all subjects with human epidermal growth factor receptor 2 (HER2) positive, unresectable, locally advanced breast cancer (LABC) or metastatic breast cancer (mBC) who had received prior anti-HER2 and chemotherapy treatment and had progressed on or after the most recent treatment for LABC or mBC, or within 6 months of completing adjuvant therapy. Subjects received trastuzumab emtansine every 3 weeks until unacceptable toxicity, withdrawal of consent, or disease progression.	

Primary: Percentage of Subjects with Adverse Events of Primary Interest

End point title	Percentage of Subjects with Adverse Events of Primary
End point description: The adverse events of primary interest (AEPIs) in this study were defined as the following: adverse events (AEs) Grade ≥ 3 , specifically, hepatic events, allergic reactions, thrombocytopenia and haemorrhage events, all Grade ≥ 3 AEs related to trastuzumab emtansine and pneumonitis events of all grades. The safety population included all subjects who had received at least 1 dose of study medication.	
End point type	Primary
End point timeframe: Baseline up to approximately 47 months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analyses were performed as this study has only one arm.	

End point values	Trastuzumab Emtansine (All Subjects)			
Subject group type	Reporting group			
Number of subjects analysed	2002			
Units: percentage of subjects				
number (not applicable)	23.1			

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-Free Survival According to Response Evaluation for Solid Tumors (RECIST) Version (v) 1.1 As Per Investigator Assessment

End point title	Progression-Free Survival According to Response Evaluation for Solid Tumors (RECIST) Version (v) 1.1 As Per Investigator Assessment
End point description: Progression free survival is defined as the time (in months) between the date of first dose and the date of disease progression or death from any cause. Progressive disease (PD) is defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum of diameters on study (including baseline). In addition to the relative increase of 20%, the sum of diameters must also demonstrate an absolute increase of ≥ 5 millimeters (mm). Intent to Treat (ITT) population 1	

included all subjects enrolled in Cohort 1.

End point type	Secondary
End point timeframe:	
Baseline up to disease progression or death due to any cause, whichever occurs first (assessed every 12 weeks during treatment period thereafter 28-42 days after the last dose or every 3-6 months up to approximately 47 months)	

End point values	Trastuzumab Emtansine (All Subjects)			
Subject group type	Reporting group			
Number of subjects analysed	2003			
Units: months				
median (confidence interval 95%)	6.9 (6 to 7.6)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival According to RECIST v 1.1 As Per Investigator Assessment

End point title	Overall Survival According to RECIST v 1.1 As Per Investigator Assessment
End point description:	
Overall survival is defined as time to death, which is the time from the date of dosing until the date of death, regardless of the cause of death. ITT population 1 included all subjects enrolled in Cohort 1.	
End point type	Secondary
End point timeframe:	
Baseline until death (up to approximately 47 months)	

End point values	Trastuzumab Emtansine (All Subjects)			
Subject group type	Reporting group			
Number of subjects analysed	2003			
Units: months				
median (confidence interval 95%)	27.2 (25.5 to 28.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Subjects with Best Overall Response (Complete Response

[CR] or Partial Response [PR]) According to RECIST v 1.1 As Per Investigator Assessment

End point title	Percentage of Subjects with Best Overall Response (Complete Response [CR] or Partial Response [PR]) According to RECIST v 1.1 As Per Investigator Assessment
-----------------	--

End point description:

Best Overall Response reported here is the Best confirmed Overall Response. To be assigned a status of PR or CR, i.e., to be a responder, changes in tumor measurements had to be confirmed by repeat assessments that had to be performed no less than 4 weeks after the criteria for response were first met, i.e., subjects needed to have two consecutive assessments of PR or CR. CR: disappearance of all target lesions. PR: At least a 30% decrease in the sum of diameters of all target lesions, taking as reference the baseline sum of diameters, in the absence of CR. ITT population 1 included all subjects enrolled in Cohort 1. Only subjects with measurable disease were included in the analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to disease progression or death due to any cause, whichever occurs first (assessed every 12 weeks during treatment period thereafter 28-42 days after the last dose or every 3-6 months up to approximately 47 months)

End point values	Trastuzumab Emtansine (All Subjects)			
Subject group type	Reporting group			
Number of subjects analysed	1613			
Units: percentage of subjects				
number (not applicable)	29.3			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Subjects with Clinical Benefit (CR or PR or Stable Disease [SD]) According to RECIST v 1.1

End point title	Percentage of Subjects with Clinical Benefit (CR or PR or Stable Disease [SD]) According to RECIST v 1.1
-----------------	--

End point description:

Clinical Benefit was defined as CR plus PR plus SD. CR: disappearance of all target lesions. PR: At least a 30% decrease in the sum of diameters of all target lesions, taking as reference the baseline sum of diameters, in the absence of CR. SD: neither sufficient shrinkage to qualify for CR or PR nor sufficient increase to qualify for PD. ITT population 1 included all subjects enrolled in Cohort 1. Only subjects with measurable disease were included in the analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to disease progression or death due to any cause, whichever occurs first (assessed every 12 weeks during treatment period thereafter 28-42 days after the last dose or every 3-6 months up to approximately 47 months)

End point values	Trastuzumab Emtansine (All Subjects)
