

Clinical trial results:

An open-label extension study of the long-term safety, tolerability and efficacy of ambrisentan in subjects with inoperable chronic thromboembolic pulmonary hypertension (CTEPH)

Summary

EudraCT number	2012-001642-17
Trial protocol	ES AT DE GB CZ NL IT
Global end of trial date	18 November 2015

Results information

Result version number	v2 (current)
This version publication date	03 August 2017
First version publication date	30 July 2016
Version creation reason	• Correction of full data set Changes required.

Notes:

Sponsors

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1-866 4357343,
Scientific contact	GSK Response Center, GlaxoSmithKline, 1-866 4357343,

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 April 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 November 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective is the long-term safety and tolerability of ambrisentan in the CTEPH population (see Safety).

- Safety assessments;
- Adverse Events;
- Serious Adverse Events;
- Clinical laboratory parameters (including liver safety and haematological parameters);
- Physical examination (including jugular venous pressure, liver size, peripheral oedema, ascites and signs of deep vein thrombosis);
- Vital Signs (including body mass index at the entry visit only);

The time to change in dose of ambrisentan or other targeted PAH therapeutic agents (prostanoids, PDE-5 inhibitors) due to tolerability issues (e.g. adverse events).

Protection of trial subjects:

The Independent Data Monitoring Committee (IDMC) recommended that the Sponsor stop the study at any time if they consider that the potential risks outweigh the potential benefits (based on review of safety [adverse experiences] data every three months).

A subject may also be discontinued from Investigational Product, or from the study, for the following reasons:

- Liver chemistry values exceeding the threshold criteria (as outlined in the protocol);
- Adverse event which in the opinion of the investigator requires withdrawal;
- Pregnancy;
- Consent withdrawn;
- Lost to follow-up;
- Protocol violation;
- Termination of study by sponsor;
- Investigator's discretion (document reason in eCRF).

Subjects discontinuing investigation product are encouraged to stay in the study at their and the investigators discretion.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 January 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Japan: 3
Country: Number of subjects enrolled	China: 3
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	Netherlands: 1

Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	Germany: 3
Worldwide total number of subjects	19
EEA total number of subjects	10

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	12
From 65 to 84 years	7
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was an open label, long-term extension study to the double-blind, placebo-controlled study AMB115811 (NCT01884675). Only those participants (par.) in study AMB115811 were eligible for enrollment in this study. The planned duration was a minimum of 18 months, but the study was terminated due to futility of enrollment in study AMB115811.

Pre-assignment

Screening details:

Out of the 33 participants randomized (16 participants in the Placebo arm and 17 in the Ambrisentan arm) in study AMB115811, a total of 19 participants were enrolled in this extension study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Previous Placebo

Arm description:

Participants received placebo tablet once daily (OD) for 16 weeks in study AMB115811. Upon enrollment in the extension study AMB116457, participants received ambrisentan 5 milligrams (mg) tablet OD. The dose could be up-titrated to ambrisentan 10 mg OD or adjusted back to ambrisentan 5 mg OD.

Arm type	Experimental
Investigational medicinal product name	5 mg or 10 mg of Ambrisentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

5 mg or 10 mg tablet of Ambrisentan administered orally once daily

Arm title	Previous Ambrisentan
------------------	----------------------

Arm description:

Participants received ambrisentan 5 mg tablet OD for 16 weeks in study AMB115811. Upon enrollment in the extension study AMB116457, participants continued to receive ambrisentan 5 mg OD. The dose could be up-titrated to ambrisentan 10 mg OD or adjusted back to ambrisentan 5 mg OD.

Arm type	Experimental
Investigational medicinal product name	5 mg or 10 mg of Ambrisentan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

5 mg or 10 mg tablet of Ambrisentan administered orally once daily

Number of subjects in period 1	Previous Placebo	Previous Ambrisentan
Started	9	10
Completed	0	0
Not completed	9	10
Adverse event, non-fatal	1	-
Study Closed/terminated	7	10
Death	1	-

Primary: Number of participants with any adverse event (AE) or serious adverse event (SAE)

End point title	Number of participants with any adverse event (AE) or serious adverse event (SAE) ^[1]
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. Serious Adverse Event (SAE) is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability/incapacity, is a congenital anomaly/birth defect. Refer to the general AE/SAE module for a list of AEs and SAEs. Participant's final visit in Study AMB115811 was used as the entry visit of this open-label extension study. Safety (Extension) Population: all participants who enrolled and took at least one dose of study treatment during the extension study.

End point type	Primary
----------------	---------

End point timeframe:

From Entry Visit of the extension study up to approximately 16 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

End point values	Previous Placebo	Previous Ambrisentan

Statistical analyses

No statistical analyses for this end point

Primary: Change from study AMB115811 Baseline in basophils, eosinophils, lymphocytes, monocytes, total neutrophils (Absolute Neutrophil Count [ANC]), platelet count, and white blood cell (WBC) count at the indicated time points

End point title	Change from study AMB115811 Baseline in basophils, eosinophils, lymphocytes, monocytes, total neutrophils (Absolute Neutrophil Count [ANC]), platelet count, and white blood cell (WBC) count at the indicated time points ^[4]
-----------------	---

End point description:

Hematology parameters were assessed at Entry visit of the extension study, Month 1, Month 3, Month 6, Month 9, Month 12, Month 15, and end of study. Change from study AMB115811 Baseline in basophils, eosinophils, lymphocytes, monocytes, total neutrophils (ANC), platelet count, and WBC count are summarized. AMB115811 Baseline is the last value recorded on or prior to start of study treatment in that study. Change from AMB115811 Baseline was calculated as the value at the indicated visit minus the Baseline value. Participant's final visit in Study AMB115811 was used as the entry visit of this open-label extension study. Only those participants available at the specified time points were analyzed (represented by n=X, X in the category titles). Instances where 99999 has been mentioned indicate that data was not available or participants were not analyzed.

End point type	Primary
----------------	---------

End point timeframe:

Baseline from study AMB115811; Entry visit of the extension study; Months 1, 3, 6, 9, 12, 15; and End of Study (assessed up to approximately 16 months)

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: There are no statistical data to report.

Secondary: Change from study AMB115811 Baseline (BL) in World Health Organization (WHO) functional class (FC) at the indicated time points

End point title	Change from study AMB115811 Baseline (BL) in World Health Organization (WHO) functional class (FC) at the indicated time points
-----------------	---

End point description:

WHO FC indicates severity of pulmonary arterial hypertension (PAH) and is an adaptation of the New York Heart Association classification, assessed by the investigator. There are 4 grades for WHO FC based on severity of symptoms (Class I = none, Class IV = most severe). Grades mapped to numeric scale 1-4 (i.e. Class IV = 4). WHO FC system links symptoms with activity limitations, allowing clinicians to predict disease progression and prognosis. AMB115811 BL is the last value recorded on or prior to start of study treatment in that study. Change from AMB115811 BL was calculated as the value at the indicated visit minus the BL value (positive change = worsening). Par.'s final visit in AMB115811 was used as entry visit of this ext study. For Ext study, the visit schedule (M1,3,6,9,12 and 15) was mapped to the visit schedule (M5,7,10,13,16 and 19) for continuity with study AMB115811. Only par. available at the specified TP were analyzed (represented by n=X,X in the category title).

Secondary: Change from study AMB115811 Baseline in Borg CR10 Scale (BCR10S) immediately following exercise at the indicated time points

End point title	Change from study AMB115811 Baseline in Borg CR10 Scale (BCR10S) immediately following exercise at the indicated time points
-----------------	--

End point description:

BCR10S score was collected immediately following completion of the 6-minute walk test. Scores range from 0 to 10 (0=nothing at all, 10=extremely strong). If par.'s perception or feeling was stronger than "10", that is "extremely strong", "Maximal" – a larger number could be used, for example 12 or still higher, that is "Absolute maximum"). AMB115811 BL data was calculated as average of 2 BCR10S values obtained following the 2 6MWD tests used in determining the BL 6MWD in that study. If only 1 measurement was available, it was used. Change from AMB115811 BL was calculated as the value at the indicated visit minus the BL value. Par.'s final visit in AMB115811 was used as the entry visit of extension study. For the Extension study, the visit schedule (Months 1, 3, 6, 9, 12 and 15) mapped to the visit schedule (Months 5, 7, 10, 13, 16 and 19) for continuity with AMB115811. Secondary: Change from study AMB115811 Baseline in Quality of Life as measured by Short Form 36 Health Survey (SF-36)

End point title	Change from study AMB115811 Baseline in Quality of Life as measured by Short Form 36 Health Survey (SF-36)
-----------------	--

End point description:

The SF-36 version 2 is a self-administered, health-related quality of life (QoL) metric. It is a 36-item questionnaire designed to measure 8 domains of functional health status and well-being: physical functioning, role-physical, bodily pain, general health perceptions, vitality, social functioning, role-emotional, and mental health as well as 2 summary measures (Physical Health and Mental Health). Each domain is scored from 0 (poorer health) to 100 (better health). Baseline of study AMB115811 was to be used. Change from study AMB115811 Baseline was to be calculated as the value at the indicated visit minus the Baseline value. The SF-36 data were collected, but after the study was terminated, not all endpoints listed in the protocol were analyzed, including the SF-36. This decision was documented in the reporting and analysis plan prior to database lock.

Month 9, n=3, 1	-11.2 (± 0.71)	99999 (± 99999)		

Month 10, n=0, 6	99999 (± 99999)	-20.1 (± 0.78)		
Month 12, n=1, 0	-67.9 (± 99999)	99999 (± 99999)		
Month 13, n=0, 5	99999 (± 99999)	7.7 (± 0.79)		
Month 16, n=0, 4	99999 (± 99999)	-2.8 (± 1.15)		
Month 19, n=0, 1	99999 (± 99999)	43.1 (± 99999)		
End of study, n=8, 9	-30.5 (± 0.85)	-41.7 (± 0.86)		

Notes:

[55] - ITT Population. Placebo arm: includes par. who received ambrisentan treatment during extension study

[56] - ITT Population

Statistical analyses

No statistical analyses for this end point

Secondary: Time to first change in dose of open-label ambrisentan due to deterioration of clinical conditions in any participant

End point title	Time to first change in dose of open-label ambrisentan due to deterioration of clinical conditions in any participant
-----------------	---

End point description:

The time to change in dose of ambrisentan or other targeted PAH therapeutic agents (prostanoids, PDE-5 inhibitors) due to deterioration of clinical condition. Dosing data were collected, but after the study was terminated, not all endpoints listed in the protocol were analyzed, including time to first change in dose of open-label ambrisentan. This decision was documented in the reporting and analysis plan prior to database lock.

End point type	Secondary
----------------	-----------

End point timeframe:

From Entry visit of the extension study up to End of Study (assessed up to approximately 16 months)

End point values	Previous Placebo	Previous Ambrisentan

Secondary: Time to first addition of another targeted PAH therapeutic agent due to deterioration of clinical condition or lack of beneficial effect with previous therapy in any participant

End point title	Time to first addition of another targeted PAH therapeutic agent due to deterioration of clinical condition or lack of beneficial effect with previous therapy in any participant
-----------------	---

End point description:

The time to addition of another targeted PAH therapeutic agents (prostanoids, PDE-5 inhibitors) due to the following reasons: Deterioration of clinical condition; Lack of beneficial effect with previous therapy (not reaching set treatment goals). PAH therapies were collected, but after the study was terminated, not all endpoints listed in the protocol were analyzed, including time to first addition of another targeted PAH therapeutic agent. This decision was documented in the reporting and analysis plan prior to database lock.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) will include AEs up to 30 days after their last dose, assessed up to approximately 16 months.

Adverse event reporting additional description:

TEAEs are reported for the Safety (Extension) Population. TEAEs are: a) new events that started during the extension study. For par. withdrawn from the study, TEAEs included AEs up to 30 days after last dose b) ongoing AEs that started before the extension study but were either not reported in study AMB115811 or worsened during the extension study.

Assessment type	Systematic

Reporting groups

Reporting group title	Previous Placebo
-----------------------	------------------

Reporting group description:

Participants received placebo tablet once daily (OD) for 16 weeks in study AMB115811. Upon enrollment in the extension study AMB116457, participants received ambrisentan 5 milligrams (mg) tablet OD. The dose could be up-titrated to ambrisentan 10 mg OD or adjusted back to ambrisentan 5 mg OD.

Reporting group title	Previous Ambrisentan
-----------------------	----------------------

Reporting group description:

Participants received ambrisentan 5 mg tablet OD for 16 weeks in study AMB115811. Upon enrollment in the extension study AMB116457, participants continued to receive ambrisentan 5 mg OD. The dose could be up-titrated to ambrisentan 10 mg OD or adjusted back to ambrisentan 5 mg OD.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 March 2013	<p>Update to maximum study sample size following changes to the Double-Blind study (AMB115811)</p> <p>Correction to the IP storage conditions to change from 15-30°C to up to 30 °C.</p> <p>Revision of pregnancy follow-up information to include partners of male subjects in the study and to be consistent with the AMB115811 study</p> <p>Correct to the description of several efficacy assessments and timepoints to remove the requirement to perform efficacy tests 30 days after discontinuation of IP (safety only is required for this follow-up)</p>
03 July 2013	<p>Clarification on the study design: subject's study participation duration</p> <p>Clarifications on inclusion criteria:</p> <ul style="list-style-type: none">-in case of prematurely withdrawal from study AMB115811 for whatever reason, the investigator to decide whether or not the subject received the IP.-addition of some general inclusion criteria on reliable methods of contraception, non participation to another study and signature of the approved consent form. <p>Clarification on the treatment given after the end of the study</p> <p>Change in the visit window of month 1 and monthly visits (+/- 7 days)</p> <p>Vital signs, clarification on blood pressure measurements</p> <p>Clarification on the study medication storage temperatures</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
