

Clinical trial results:

A Phase III, Randomized, Double-Blind, Clinical Trial to Study the Efficacy and Safety of MK-0431D (a fixed-dose combination [FDC] of sitagliptin and simvastatin) for the Treatment of Patients With Type 2 Diabetes Mellitus (T2DM) with Inadequate Glycemic Control on Metformin Monotherapy

Summary

EudraCT number	2012-001868-29
Trial protocol	LT LV HU CZ PL IT
Global end of trial date	01 November 2013

Results information

Result version number	v2 (current)
This version publication date	06 May 2016
First version publication date	18 March 2015
Version creation reason	• Correction of full data set Update Record

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 November 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 November 2013
Global end of trial reached?	Yes
Global end of trial date	01 November 2013
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

1. To assess the effect of MK-0431D compared to sitagliptin alone on hemoglobin A1c (A1C). 2. To assess the safety and tolerability of MK-0431D.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

The following additional measure defined for this individual study was in place for the protection of trial subjects: participants not meeting specific glycemic goals received rescue therapy initiated with glimepiride (open-label, supplied locally).

Background therapy:

Participants will continue on their stable, pre-screening metformin daily dose of ≥ 1500 mg for at least 12 weeks prior to randomization and during the study.

Evidence for comparator: -

Actual start date of recruitment	10 October 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 6
Country: Number of subjects enrolled	Czech Republic: 11
Country: Number of subjects enrolled	Hungary: 18
Country: Number of subjects enrolled	Latvia: 1
Country: Number of subjects enrolled	Lithuania: 2
Country: Number of subjects enrolled	Macedonia, the former Yugoslav Republic of: 3
Country: Number of subjects enrolled	Malaysia: 1
Country: Number of subjects enrolled	Puerto Rico: 5
Country: Number of subjects enrolled	Romania: 11
Country: Number of subjects enrolled	Colombia: 3
Country: Number of subjects enrolled	Croatia: 2
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	South Africa: 17
Country: Number of subjects enrolled	United States: 218
Worldwide total number of subjects	299
EEA total number of subjects	51

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	251
From 65 to 84 years	48
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All participants randomized population.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Sitagliptin/Simvastatin FDC
------------------	-----------------------------

Arm description:

Sitagliptin 100 mg/simvastatin 40 mg fixed dose combination (FDC) plus placebo to sitagliptin plus placebo to simvastatin administered orally once daily in the evening for 16 weeks. Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be uptitrated to 6 mg once daily) as rescue therapy.

Arm type	Experimental
Investigational medicinal product name	Sitagliptin/Simvastatin FDC
Investigational medicinal product code	
Other name	MK-0431D
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Sitagliptin 100 mg/Simvastatin 40 mg fixed-dose combination tablet administered once daily in the evening.

Investigational medicinal product name	Placebo to simvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo to simvastatin administered once daily in the evening.

Investigational medicinal product name	Placebo to sitagliptin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo to sitagliptin administered once daily in the evening.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
Participants will continue on their stable, pre-screening metformin daily dose of ≥ 1500 mg for at least 12 weeks prior to randomization and during the study.

Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Following randomization, participants requiring glycemic rescue may receive open-label glimepiride initiated at a dose of 1 mg/day or 2 mg/day which may be up-titrated to 6 mg/day taken once daily with breakfast or the first main meal of the day.

Arm title	Sitagliptin
------------------	-------------

Arm description:

Sitagliptin 100 mg plus placebo to simvastatin plus placebo to sitagliptin/simvastatin FDC administered orally once daily in the evening for 16 weeks.

Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be up-titrated to 6 mg once daily) as rescue therapy.

Arm type	Active comparator
Investigational medicinal product name	Sitagliptin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Sitagliptin 100 mg oral tablet administered once daily in the evening.

Investigational medicinal product name	Placebo to simvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo to simvastatin administered once daily in the evening.

Investigational medicinal product name	Placebo to sitagliptin/simvastatin FDC
Investigational medicinal product code	
Other name	MK-0431D
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo to sitagliptin/simvastatin FDC tablet administered once daily in the evening.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants will continue on their stable, pre-screening metformin daily dose of ≥ 1500 mg for at least 12 weeks prior to randomization and during the study.

Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Following randomization, participants requiring glycemic rescue may receive open-label glimepiride initiated at a dose of 1 mg/day or 2 mg/day which may be up-titrated to 6 mg/day taken once daily with breakfast or the first main meal of the day.

Arm title	Simvastatin
------------------	-------------

Arm description:

Simvastatin 40 mg plus placebo to sitagliptin plus placebo to sitagliptin/simvastatin FDC administered orally once daily in the evening for 16 weeks.

Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be up-titrated to 6 mg once daily) as rescue therapy.

Arm type	Active comparator
Investigational medicinal product name	Simvastatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Simvastatin 40 mg tablet administered orally once daily in the evening.

Investigational medicinal product name	Placebo to sitagliptin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo to sitagliptin administered once daily in the evening.

Investigational medicinal product name	Placebo to sitagliptin/simvastatin FDC
Investigational medicinal product code	
Other name	MK-0431D
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo to sitagliptin/simvastatin FDC tablet administered once daily in the evening.

Investigational medicinal product name	Metformin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants will continue on their stable, pre-screening metformin daily dose of ≥ 1500 mg for at least 12 weeks prior to randomization and during the study.

Investigational medicinal product name	Glimepiride
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Following randomization, participants requiring glycemic rescue may receive open-label glimepiride initiated at a dose of 1 mg/day or 2 mg/day which may be up-titrated to 6 mg/day taken once daily with breakfast or the first main meal of the day.

Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be up-titrated to 6 mg once daily) as rescue therapy.	

Primary: Change from baseline in A1C at Week 16 (sitagliptin/simvastatin FDC vs. sitagliptin)

End point title	Change from baseline in A1C at Week 16 (sitagliptin/simvastatin FDC vs. sitagliptin) ^[1]
End point description: A1C is measured as percent. Thus, this change from baseline reflects the Week 16 A1C percent minus the Week 0 A1C percent. This primary endpoint only includes results for sitagliptin/simvastatin FDC vs. sitagliptin. Results for simvastatin are presented below under secondary endpoints. Full analysis set (FAS) population defined as all randomized participants who took at least one dose of study drug and had at least one measurement for the analysis of this outcome measure (baseline or subsequent to the first dose of study drug).	
End point type	Primary
End point timeframe: Baseline and Week 16	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: This primary endpoint only includes results for sitagliptin/simvastatin FDC vs. sitagliptin. Results for simvastatin are presented under secondary endpoints.

End point values	Sitagliptin/Simvastatin FDC	Sitagliptin		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	100	97		
Units: percent				
least squares mean (confidence interval 95%)	-0.41 (-0.64 to -0.17)	-0.59 (-0.83 to -0.36)		

Statistical analyses

Statistical analysis title	Difference in least squares means
Comparison groups	Sitagliptin/Simvastatin FDC v Sitagliptin
Number of subjects included in analysis	197
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[2]
P-value	= 0.267 ^[3]
Method	Longitudinal Data Analysis Model
Parameter estimate	Difference in least squares means
Point estimate	0.19
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.14
upper limit	0.52

Notes:

[2] - Due to inadequate sample size, the primary hypothesis of non-inferiority was not tested. Nominal p-value is provided.

[3] - Based on a longitudinal data analysis model including terms for region, treatment, time, and the interaction of time by treatment with the restriction of common mean across treatment groups at baseline.

Primary: Number of participants who experienced at least one adverse event (AE)

End point title	Number of participants who experienced at least one adverse event (AE)
-----------------	--

End point description:

Excludes data after rescue therapy. Adverse event is defined as any unfavorable and unintended change in the structure, function, or chemistry of the body temporally associated with the use of the Sponsor's product, whether or not considered related to the use of the product.

All participants as treated population defined as all randomized participants who received at least one dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Up to 16 weeks for non-serious AEs; up to 18 weeks for serious AEs

Statistical analysis title	Difference in least squares means
Comparison groups	Sitagliptin/Simvastatin FDC v Sitagliptin
Number of subjects included in analysis	197
Analysis specification	Pre-specified
Analysis type	superiority ^[14]
P-value	< 0.001 ^[15]
Method	Longitudinal Data Analysis Model
Parameter estimate	Difference in least squares means
Point estimate	-25.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-35.6
upper limit	-15.6

Notes:

[14] - Due to inadequate sample size, the secondary hypothesis was not tested. Nominal p-value is provided.

[15] - Based on a longitudinal data analysis model including terms for region, treatment, time, and the interaction of time by treatment with the restriction of common mean across treatment groups at baseline.

Statistical analysis title	Difference in least squares means
Comparison groups	Sitagliptin/Simvastatin FDC v Simvastatin
Number of subjects included in analysis	198
Analysis specification	Pre-specified
Analysis type	other ^[16]
P-value	= 0.286 ^[17]
Method	Longitudinal Data Analysis Model
Parameter estimate	Difference in least squares means
Point estimate	5.3
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.5
upper limit	15.2

Notes:

[16] - There is no hypothesis comparing Sitagliptin/Simvastatin vs. Simvastatin for LDL-C-lowering. Nominal p-value is provided.

[17] - Based on a longitudinal data analysis model including terms for region, treatment, time, and the interaction of time by treatment with the restriction of common mean across treatment groups at baseline.

Secondary: Percent change from baseline in TC at Week 16

End point title	Percent change from baseline in TC at Week 16
End point description:	
Percent change from baseline was calculated as the Week 16 value minus the Week 0 value, divided by the Week 0 value ×100%.	
FAS population defined as all randomized participants who took at least one dose of study drug and had at least one measurement for the analysis of this outcome measure (baseline or subsequent to the first dose of study drug).

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

Up to 18 weeks

Adverse event reporting additional description:

All participants as treated population defined as all randomized participants who received at least one dose of study drug. Serious adverse events include data after rescue therapy and non-serious adverse events exclude data after rescue therapy

Assessment type	Systematic

Reporting groups

Reporting group title	Sitagliptin/Simvastatin FDC
-----------------------	-----------------------------

Reporting group description:

Sitagliptin 100 mg/simvastatin 40 mg fixed dose combination (FDC) plus placebo to sitagliptin plus placebo to simvastatin administered orally once daily in the evening. Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be uptitrated to 6 mg once daily) as rescue therapy.

Reporting group title	Simvastatin
-----------------------	-------------

Reporting group description:

Simvastatin 40 mg plus placebo to sitagliptin plus placebo to sitagliptin/simvastatin FDC administered orally once daily in the evening for 16 weeks.

Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be up-titrated to 6 mg once daily) as rescue therapy.

Reporting group title	Sitagliptin
-----------------------	-------------

Reporting group description:

Sitagliptin 100 mg plus placebo to simvastatin plus placebo to sitagliptin/simvastatin FDC administered orally once daily in the evening for 16 weeks.

Participants will continue on their stable pre-screening metformin dose and dosing regimen of ≥ 1500 mg daily for the duration of the study. Participants may receive glimepiride 1 mg once daily or 2 mg once daily (may be up-titrated to 6 mg once daily) as rescue therapy.

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No non-serious adverse event exceeded the 5% threshold for any reporting group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
12 September 2013	The trial was terminated for business reasons.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The early termination of this study resulted in a smaller number of participants analyzed.
--

Notes:
