[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Of the 58 participants in the safety analysis set, 56 completed the treatment and follow-up period as planned (i.e. Day 30 and Day 180). Two participants, one in each treatment group, discontinued study prematurely due to AEs (unstable angina)
