

## Clinical trial results:

**Estudio abierto fase II de ultra-selección de pacientes mediante tecnología de genotipado de nueva generación para el esquema FOLFIRI + Panitumumab en pacientes con cáncer colorrectal estadio IV resistentes a irinotecán sin mutaciones detectables utilizando técnicas de alta sensibilidad para la detección de mutaciones en los genes KRAS, PIK3Ca, BRAF y NRAS**

### Summary

EudraCT number	2012-001955-38
Trial protocol	ES
Global end of trial date	30 July 2016

### Results information

Result version number	v1 (current)
This version publication date	02 July 2020
First version publication date	02 July 2020

### Trial information

#### Trial identification

Sponsor protocol code	TTD-12-03
-----------------------	-----------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01704703
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 July 2016
Global end of trial reached?	Yes
Global end of trial date	30 July 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To estimate the effect of the combination of panitumumab with FOLFIRI on objective response rate defined as complete and partial response according RECIST criteria 1.1, in patients with metastatic colorectal cancer (mCRC) refractory to irinotecan-based chemotherapy without any mutation associated to resistance on KRAS, PIK3Ca (exon 20), BRAF and NRAS genes detected with hypersensitive techniques (Digital PCR in Fluidigm nanofluidic dPCR platform), named as molecular ultra-selected subgroup.

Protection of trial subjects:

All patients have been treated according to GCP criteria. Patients were entitled to withdraw from the study at any time and for any reason without prejudice of their future medical care on the part of the doctor or the center.

Doses of panitumumab and FOLFIRI could be reduced/delayed in case of adverse events (AEs) as per protocol. Any medication that patients needed for their correct clinical control (except prohibited therapies), according to investigator's criteria were allowed.

Background therapy:

None.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	13 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 72
Worldwide total number of subjects	72
EEA total number of subjects	72

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38
From 65 to 84 years	34
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Ninety-six patients were recruited from November 2012 to July 2015, 24 of whom were screening failures. Thus, 72 patients were finally included in the study. This was a national study conducted in the Departments of Medical Oncology at 12 Spanish hospitals.

### Pre-assignment

Screening details:

Patients aged  $\geq 18$  years with histologically confirmed colorectal adenocarcinoma, wild-type KRAS exon 2 (KRAS and NRAS exons 2/3/4 after protocol amendment on 25 July 2013), with  $\geq 1$  initially measurable and unresectable metastatic lesion, Karnofsky performance status  $\geq 70\%$  and adequate bone marrow, renal, hepatic and metabolic functions.

### Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

### Arms

Arm title	Panitumumab + FOLFIRI
-----------	-----------------------

Arm description:

Patients were treated with panitumumab plus FOLFIRI.

Arm type	Experimental
Investigational medicinal product name	Panitumumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Patients received panitumumab 6mg/kg over a 60-min intravenous infusion on day 1 in 2-weeks cycles.

Investigational medicinal product name	FOLFIRI
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

FOLFIRI was intravenously administered on day 1 in 2-week cycles according to the following schema: irinotecan 180mg/m<sup>2</sup> over 30-90-min infusion, leucovorin 400 mg/m<sup>2</sup> over 120-min infusion, 5-fluorouracil 400mg/m<sup>2</sup> bolus, 5-fluorouracil 2400 mg/m<sup>2</sup> over 46-h infusion.

<b>Number of subjects in period 1</b>	Panitumumab + FOLFIRI
Started	72
Completed	71
Not completed	1
Consent withdrawn by subject	1

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Toxicity was assessed at every study visit according to the Common Toxicity Criteria for Adverse Events version 4.0

Adverse event reporting additional description:

If a patient had more than one event classified with the same preferred term, then the worst case was used

Assessment type	Systematic

Musculoskeletal and connective tissue disorders			
Lumbar pain			
subjects affected / exposed	8 / 72 (11.11%)		
occurrences (all)	10		
Infections and infestations			

Conjunctivitis subjects affected / exposed occurrences (all)	20 / 72 (27.78%) 26		
Urine infection subjects affected / exposed occurrences (all)	6 / 72 (8.33%) 8		
Respiratory infection subjects affected / exposed occurrences (all)	4 / 72 (5.56%) 5		
Metabolism and nutrition disorders			
Anorexia subjects affected / exposed occurrences (all)	20 / 72 (27.78%) 33		
Iron deficiency subjects affected / exposed occurrences (all)	5 / 72 (6.94%) 8		
Hypomagnesaemia subjects affected / exposed occurrences (all)	18 / 72 (25.00%) 42		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 January 2013	Through this amendment the following changes were implemented: 1- Incorporation of a new exploratory objective (identification of mutation through high-sensitivity methodology in biologic fluids, i.e. blood); 2- Protocol changes in order to enhance text comprehension; 3- Update of the principal investigators and study sites.
21 June 2013	The approval of this protocol amendment was on 25th July 2013. Through this amendment the following changes were implemented: 1- Modification of a selection criteria, extension of the mutation panel for KRAS and NRAS genes (initially patients may have had no mutation in KRAS exons 2 and 3, and after protocol amendment may have had no mutation in KRAS exons 2, 3 and 4 and NRAS exons 2, 3 and 4) and review of the sample size justification; 2- Protocol changes in order to enhance text comprehension; 3- Update of the principal investigators and study sites.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The impossibility to assess the role of PIK3CA status due to the low number of mutations. In addition, initially enrolled patients may have had mutation in KRAS 3/4 exons and NRAS 2/3/4 exons.

Notes:

---
