

Clinical trial results:

A phase II study of intratumoral application of L19IL2/L19TNF in melanoma patients in clinical stage III or stage IV M1a with presence of injectable cutaneous and/or subcutaneous lesions.

Summary

EudraCT number	2012-001991-13
Trial protocol	IT
Global end of trial date	26 May 2015

Results information

Result version number	v1 (current)
This version publication date	13 July 2022
First version publication date	13 July 2022

Trial information

Trial identification

Sponsor protocol code	PH-L19IL2TNF-02/12

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 November 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 May 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Efficacy of L19IL2/L19TNF-treated lesions measured as rate of patients with complete response (CR) at week 12 (day 85).

Protection of trial subjects:

Safety of the patients was carefully evaluated during all the period in which the patient was in the study. During the active treatment phase, regular laboratory analysis of the common clinical parameters were performed, as also physical examination and vital signs monitoring.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 22
Worldwide total number of subjects	22
EEA total number of subjects	22

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	11
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Overall, 22 patients were enrolled from 05.12.2012 to 23.05.2014: 13 at the Milan site and 9 at the Siena site.

Pre-assignment

Screening details:

After obtaining patient informed consent, screening evaluations and procedures had to be performed within 14 days prior to the start of therapy. At the screening visit, a full evaluation of the status of patient was performed. Based on the information obtained from the assessments, the patient's eligibility was decided upon.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Single arm
-----------	------------

Arm description:

Patients were treated with a combination of 10 Mio IU of L19IL2 and 312 µg of L19TNF to be administered in an approximate volume of 4.2 ml as a single or multiple intratumoral injection once every week for up to 4 weeks.

L19IL2 was dosed at 10 Mio IU per administration, the amount of L19TNF per administration was 312 µg. However, the dose could be adjusted between 78 and 312 µg per administration according to size and number of lesions and at the investigator's discretion. The total daily dose was distributed between all injectable soft-tissue metastases.

Arm type	Experimental
Investigational medicinal product name	Onfekafusp alfa
Investigational medicinal product code	L19TNF
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intratumoral use

Dosage and administration details:

Up to 312 µg of L19TNF intratumoral injection once every week for up to 4 weeks.

Investigational medicinal product name	Bifikafusp alfa
Investigational medicinal product code	L19IL2
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intratumoral use

Dosage and administration details:

10 Mio IU of L19IL2 intratumoral injection once every week for up to 4 weeks.

Number of subjects in period 1	Single arm
Started	22
Completed	7
Not completed	15
Consent withdrawn by subject	3
Adverse event, non-fatal	1
surgery of residual metastatic lesions	6
Progressive disease	5

Statistical analyses

Statistical analysis title	Two-sided exact binomial statistical test
Statistical analysis description: A two-sided exact binomial statistical test was applied for the rate of patients with CR, OR, and DC of the L19IL2/L19TNF-treated lesions and all lesions for all the available tumor assessments. The hypothesized value for the null hypothesis was 50%. The duration of OR and DC was calculated using Kaplan Meier estimator for the treated lesions and for all the lesions.
