Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 January 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	26 January 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of the efficacy of ipatasertib in combination with oxaliplatin, 5-fluorouracil, and leucovorin (modified FOLFOX6 [mFOLFOX6]) chemotherapy in participants with advanced or metastatic gastric or gastroesophageal junction (GEJ) cancer.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 9
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	United States: 31
Country: Number of subjects enrolled	Hong Kong: 1
Country: Number of subjects enrolled	Korea, Republic of: 64
Country: Number of subjects enrolled	Malaysia: 5
Country: Number of subjects enrolled	Singapore: 7
Country: Number of subjects enrolled	Taiwan: 9
Worldwide total number of subjects	153
EEA total number of subjects	26

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	96
From 65 to 84 years	56
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 33 centers in 11 countries.

Pre-assignment

Screening details:

Total 153 participants were randomized in this study, of which 152 participants received treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Ipatasertib + mFOLFOX6

Arm description:

Ipatasertib was administered at a dose of 600 milligrams (mg) orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity. Following ipatasertib administration on Day 1 of each cycle, the participant then received mFOLFOX6 in the following order: oxaliplatin as an 85 milligram per square-meter (mg/m²) intravenous (IV) infusion on Day 1 every 14 days with co-administration of leucovorin at 400 mg/m² or equivalent substitute. The participant then received 5-fluorouracil (5-FU) as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion). Following Cycle 8, oxaliplatin was discontinued.

Arm type	Experimental
Investigational medicinal product name	Ipatasertib
Investigational medicinal product code	
Other name	GDC-0068
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Ipatasertib was administered at a dose of 600 mg orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Oxaliplatin was administered as an 85 mg/m² IV infusion on Day 1 every 14 days up to Cycle 8 until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	Leucovorin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Leucovorin was administered at a dose of 400 mg/m² as an intravenous infusion on Day 1 every 14 days until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	5-Fluorouracil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5-Fluorouracil (5-FU) was administered as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion) from Days 1 to 3 of each cycle (over approximately a 46-hour period) until the participant experienced disease progression or intolerable toxicity.

Arm title	Placebo + mFOLFOX6
------------------	--------------------

Arm description:

Placebo matched to ipatasertib was administered orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity. Following placebo administration on Day 1 of each cycle, the participant then received mFOLFOX6 in the following order: oxaliplatin as an 85 mg/m² IV infusion on Day 1 every 14 days with co-administration of leucovorin at 400 mg/m² or equivalent substitute. The participant then received 5-FU as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion). Following Cycle 8, oxaliplatin was discontinued.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo matched to ipatasertib was administered orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	Leucovorin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Leucovorin was administered at a dose of 400 mg/m² as an intravenous infusion on Day 1 every 14 days until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	5-Fluorouracil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5-Fluorouracil (5-FU) was administered as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion) from Days 1 to 3 of each cycle (over approximately a 46-hour period) until the participant experienced disease progression or intolerable toxicity.

Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Oxaliplatin was administered as an 85 mg/m² IV infusion on Day 1 every 14 days up to Cycle 8 until the participant experienced disease progression or intolerable toxicity.

Number of subjects in period 1	Ipatasertib + mFOLFOX6	Placebo + mFOLFOX6
Started	71	82
Treated	70	82

Primary: Progression-Free Survival (PFS) in All Randomized Participants and Participants With PTEN Loss Tumors at Primary Analysis

End point title	Progression-Free Survival (PFS) in All Randomized Participants and Participants With PTEN Loss Tumors at Primary Analysis
End point description:	
PFS was defined as the time from randomization to the first occurrence of disease progression (as determined using RECIST Version 1.1 and assessed by the investigator), or death from any cause on study. Progressive disease (PD): At least a 20% increase in the sum of diameters of target lesions, and the sum must also demonstrate an absolute increase of at least 5 mm or progression of non-target lesions. Death on study was defined as death from any cause within 30 days of the last dose of study treatment regimen. Kaplan–Meier estimates were used for evaluation. The randomized population was defined as all participants who were randomized in the study. Randomized participants with PTEN loss tumors were also analyzed. For the primary analysis, PTEN loss was defined as the condition "Perc Cells Cytoplasmic Stain Int 0" of greater than or equal to 10. Here 'n' indicates the number analyzed for the specified population.	
End point type	Primary
End point timeframe:	
Screening, at the end of Cycle 4 (cycle = 14 days) and every fourth cycle thereafter until disease progression or death, whichever occurred first, assessed up to approximately 1.75 years

Secondary: Number of Participants with Adverse Events (AEs)

End point title	Number of Participants with Adverse Events (AEs)
-----------------	--

End point description:

An adverse event is any untoward medical occurrence in a subject administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as adverse events. Death on study was defined as death from any cause within 30 days of the last dose of study treatment regimen. The safety population was defined as all randomized participants who received at least one dose of ipatasertib/placebo or mFOLFOX6, with participants grouped according to the treatment actually received.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline until end of study (up to approximately 7.5 years)

Adverse event reporting additional description:

Safety population included treated participants (i.e., participants who received at least one dose of ipatasertib/placebo or mFOLFOX6), with participants allocated to the treatment arm associated with the regimen that they actually received.

Assessment type	Systematic

Reporting groups

Reporting group title	Placebo+mFOLFOX6
-----------------------	------------------

Reporting group description:

Placebo matched to ipatasertib was administered orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity. Following placebo administration on Day 1 of each cycle, the participant then received mFOLFOX6 in the following order: oxaliplatin as an 85 mg/m² IV infusion on Day 1 every 14 days with co-administration of leucovorin at 400 mg/m² or equivalent substitute. The participant then received 5-FU as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion). Following Cycle 8, oxaliplatin was discontinued.

Reporting group title	Ipatasertib+mFOLFOX6
-----------------------	----------------------

Reporting group description:

Ipatasertib was administered at a dose of 600 milligrams (mg) orally once daily, beginning on Day 1 of Cycle 1 through Day 7 of each 14-day cycle until the participant experienced disease progression or intolerable toxicity. Following ipatasertib administration on Day 1 of each cycle, the participant then received mFOLFOX6 in the following order: oxaliplatin as an 85 milligram per square-meter (mg/m²) intravenous (IV) infusion on Day 1 every 14 days with co-administration of leucovorin at 400 mg/m² or equivalent substitute. The participant then received 5-fluorouracil (5-FU) as a 400 mg/m² bolus infusion followed by 5-FU as a 2400 mg/m² continuous IV infusion (or 5-FU as a 1200 mg/m²/day continuous IV infusion). Following Cycle 8, oxaliplatin was discontinued.

Serious adverse events	Placebo+mFOLFOX6	Ipatasertib+mFOLFOX6

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 March 2013	Version 2: Updated information related to the ipatasertib/placebo formulation had been added. Updated safety and clinical data from the Phase Ib study of ipatasertib in combination with chemotherapy, including mFOLFOX6, (Study PAM4983g) had been included. Dose-modification guidelines for the management of adverse events related to mFOLFOX6 chemotherapy and/or to ipatasertib had been updated to improve clarity and consistency. Medical monitor contact information for sites in Europe and Asia had been added.
25 August 2014	Version 3: The sample size for this study had been increased from approximately 120 participants to approximately 150 patients. The primary reason to increase the sample size was to maintain the target PFS events by accounting for the unexpected discontinuations for surgery and/or radiofrequency ablation in some participants left with minimal disease following treatment on this study. The adjusted increase in sample size enabled a robust estimate of the primary endpoint with the preplanned PFS events for the overall population and for the diagnostic-positive (Dx+) sub-population.
01 April 2016	Version 4: The main purpose of this amendment was to provide a high-level summary of the primary analysis results for Study GO28341 and describe the management plan for ongoing participants. The primary analysis for safety and efficacy showed that ipatasertib+mFOLFOX6, compared with placebo +mFOLFOX6, did not improve progression-free survival (primary endpoint) or overall survival (secondary endpoint) in either the randomized population or the subset of participants who had tumors with loss of the tumor suppressor phosphatase and tensin homolog (PTEN loss) meeting pre-defined criteria by immunohistochemistry prior to the primary analysis. Safety data from this study were consistent with the known safety profiles for ipatasertib and mFOLFOX6 chemotherapy. The overall safety profile and the risks associated with ipatasertib had not changed. As of 11 January 2016, the Sponsor provided all investigators with the unblinded study treatment assignments and a summary of the primary analysis results to allow investigators to share this information and discuss future treatment plans with the 7 ongoing participants in the study. Because of a lack of clinical benefit, the Sponsor recommended discontinuation of ipatasertib/placebo treatment. Allowed for certain laboratory assessments scheduled during the treatment period (glycosylated hemoglobin, fasting lipid profile, coagulation, and urinalysis) to be performed only if clinically indicated, at the discretion of the investigator, for participants who continue to receive ipatasertib with or without mFOLFOX6 treatment in the study. Eliminated exploratory assessments, survival follow-up and assessment of new anti-cancer therapies for all participants.
26 October 2017	Version 5: GDC-0068 was updated to reflect the international nonproprietary name "ipatasertib". The Protocol was amended to provide an update on the formulation of ipatasertib (previously capsule; tablet formulation effective no later than March, 2018) and to simplify the study assessment schedule for the 1 ongoing participant in the study (at approximately every 3-4 months, or more frequently if clinically indicated). As of 1 October 2017, the study was unblinded following primary analysis; 1 participant remained on study treatment receiving ipatasertib.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
