

## Clinical trial results:

### Vitamin D supplementation in cutaneous malignant melanoma outcome Summary

EudraCT number	2012-002125-30
Trial protocol	BE HU
Global end of trial date	25 July 2022

#### Results information

Result version number	v1 (current)
This version publication date	11 October 2024
First version publication date	11 October 2024

#### Trial information

##### Trial identification

Sponsor protocol code	2012LRDVDCM
-----------------------	-------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01748448
WHO universal trial number (UTN)	-

Notes:

##### Sponsors

Sponsor organisation name	UZLeuven / KULeuven
Sponsor organisation address	Herestraat 49, Leuven, Belgium, 3000
Public contact	Dermatology clinical trials, Dermatology, 0032 16337950, dermatologie-admin@uzleuven.ac.be
Scientific contact	Dermatology clinical trials, Dermatology, 0032 16337950, dermatologie-admin@uzleuven.ac.be

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 June 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 July 2022
Global end of trial reached?	Yes
Global end of trial date	25 July 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess whether vitamin D supplementation, in the follow up period after diagnosis and surgery of the primary tumor, has a protective effect on relapse of cutaneous malignant melanoma and whether this protective effect correlates with VDR immunoreactivity in the primary tumour.

Protection of trial subjects:

A DSMB Committee has analysed key safety aspects (safety parameters and adverse events) in regular intervals during the ongoing trial to ensure patient safety.

The DSMB was unblinded and composed of medical experts not involved in the study: a dermatologist, oncologist and statistician. They assessed the safety of patients based on the safety parameters and adverse events. In particular, at regular intervals an unblinded interim analysis was performed to assess the difference between the intervention arms and to exclude an increase in relapse rate in the vitamin D supplemented arm. No early stopping for efficacy was allowed.

Safety aspects:

- serum calcium, phosphorus, to detect for vitamin D intoxication (every 3 months)
- measurement of total WBC and differential (every 6 months) and a record of infection rate (every 3 months) to check for immunosuppressive effects
- Adverse clinical events

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Belgium: 432
Worldwide total number of subjects	436
EEA total number of subjects	436

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	321
From 65 to 84 years	115
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

After diagnosis, staging and surgical treatment, and after obtaining written informed consent, patient will undergo screening at the investigational site to ensure that the patient meets all other in- and exclusion criteria. Written informed consent must be obtained from patients prior to any study specific procedure.

### Pre-assignment

Screening details:

Screening phase: Patients are recruited at the Departments of Dermatology, Oncosurgery or Medical Oncology at the University Hospitals Leuven (Belgium), and other European academic sites. If all eligibility criteria are met, patients are then randomized to the treatment or control group. Randomisation is completed via IVRS.

### Period 1

Period 1 title	Treatment period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst

Blinding implementation details:

Vitamin D3 supplementation is given to the patients assigned to the treatment group and placebo to the control group in a double blind manner. The randomization schedule will be kept under closure at the data management centre. All other study staff members, dermatologists, trial nurses, and patients will be blinded to the treatment allocation. The DSMB members may be unblinded to assess the safety of the patients.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	D-Cure® (cholecalciferol)

Arm description:

Name investigational product: D-Cure® (amp. cholecalciferol 100.000 U.I./ml)  
Content of 1 ml amp.: Cholecalciferol 100.000 U.I./ml -DL  $\alpha$ -Tocopherol. acetat – Sorbitol. oleic. polyoxyaethylenat. - Aetherol. aurantii corticis dulcis - olie van olijfolie ad 1 ml  
Administration route: orally

Arm type	Active comparator
Investigational medicinal product name	D-Cure® (amp. cholecalciferol 100.000 U.I./ml)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

D-Cure® amp. 100.000 U.I/ml  
D-Cure® (oral ampoules) will be stored at room temperature, below 25 °C.  
Administration route: orally

<b>Arm title</b>	Placebo: Oil
------------------	--------------

Arm description:

Name investigational product: Oil  
Oil will be used as matching placebo for vitamin D (cholecalciferol)  
Composition: Tocopherol Acetate, sweet orange peel oil, Polyglyceryl oleate, olive oil refined ad 1ml  
Administration route: orally

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo: Olive oil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The -Olive oil (oral ampoules) will be stored at room temperature, below 25°C.

Administration route: orally

Number of subjects in period 1	D-Cure® (cholecalciferol)	Placebo: Oil
Started	218	218
Completed	216	217
Not completed	2	1
Consent withdrawn by subject	1	-
Adverse event, non-fatal	1	-
personal	-	1

## Period 2

Period 2 title	Follow-up period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst

Blinding implementation details:

After the treatment period (in which the patients take study medication) (placebo or D-Cure), there is the follow-up period, no more study medication is taken, the study is still double-blind, and the patients are followed at the clinical department, Dermatology or Oncology, for relapse and/or death.

## Arms

Arm title	Follow up
-----------	-----------

Arm description:

After the treatment period (in which the patients take study medication, placebo or D-Cure), there is the follow-up period, no more study-medication is taken, the study is still double-blind, and the patients are followed at the clinical department, Dermatology or Oncology, for relapse and/or death.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

<b>Number of subjects in period 2</b>	Follow up
Started	433
Completed	433

## Baseline characteristics

### Reporting groups

Reporting group title	D-Cure® (cholecalciferol)

## End points

### End points reporting groups

Reporting group title	D-Cure® (cholecalciferol)
Reporting group description:	
Name investigational product: D-Cure® (amp. cholecalciferol 100.000 U.I./ml)	
Content of 1 ml amp.: Cholecalciferol 100.000 U.I./ml -DL $\alpha$ -Tocopherol. acetat - Sorbitol. oleic. polyoxyaethylenat. - Aetherol. aurantii corticis dulcis - olie van olijfolie ad 1 ml	
Administration route: orally	
Reporting group title	Placebo: Oil
Reporting group description:	
Name investigational product: Oil	
Oil will be used as matching placebo for vitamin D (cholecalciferol)	
Composition: Tocopherol Acetate, sweet orange peel oil, Polyglyceryl oleate, olive oil refined ad 1ml	
Administration route: orally	
Reporting group title	Follow up
Reporting group description:	
After the treatment period (in which the patients take study medication, placebo or D-Cure), there is the follow-up period, no more study-medication is taken, the study is still double-blind, and the patients are followed at the clinical department, Dermatology or Oncology, for relapse and/or death.	

### Primary: Relapse-Free Survival\_Death or relapse

End point title	Relapse-Free Survival_Death or relapse
End point description:	
The difference in relapse-free survival will be compared between the two treatment groups by means of a Cox proportional hazards model for interval censored data stratified for time since diagnosis (3 strata: 0, 6 or 12 months ago). The model will be fitted using PROC ICPHREG using the EMCIM algorithm and the baseline hazards will be estimated using cubic splines. The best fitting model using 2 to 5 degrees of freedom will be chosen based on Akaike Information Criterion (AIC). The hazard ratio with a 95% confidence interval and corresponding p-value will be reported.	
It will be verified whether the treatment effect is stratum dependent. This will be done by analysing each stratum separately and performing a Chi-square test to compare the treatment effect between the 3 strata. If found significant, the strata will be reported separately.	
End point type	Primary

### Secondary: Evolution of 25(OH)D3\_Summary over Time (mean)

End point title	Evolution of 25(OH)D3_Summary over Time (mean)
-----------------	--

End point description:

The evolution of 25(OH)D3 serum levels will be described descriptively over time.

In addition, the influence of a 10-fold genetic SNP on the baseline Vitamine D level will be investigated by means of an analysis of variance (ANOVA).

For those patients randomized to the Vitamin D group, the changes in 25(OH)D3 serum level from baseline to 6 and 12 months will be compared for each genetic snip. A random intercept model with the 6- and 12-months measurement as response and the baseline value, time (6 or 12 months), a genetic snip and the interaction between time and snip as covariate will be fitted to the data. The change from baseline at 6 and 12 months by SNP will be reported with a 95% CI.

Month 33	39 (34 to 44)	29 (26 to 32)		
Month 36	39 (31 to 48)	24 (20 to 29)		
Month 39	36 (34 to 41)	21 (15 to 26)		
Study End	42 (34 to 50)	27 (20 to 33)		

Notes:

[3] - Number of subjects is different in all timepoints

[4] - Number of subjects is different in all timepoints

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

In this study, the collection period for adverse events starts at randomisation and ends when the patient completes the study or at premature termination. (untill end of overall period)

Adverse event reporting additional description:

The investigator will use the following terms to assess the severity of the adverse event: mild, moderate, severe

The investigator will use the following causality terms to assess the relationship of the adverse event or clinical efficacy event to the use of the investigational medicinal product: Reasonable causal relationship or not.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	26

### Reporting groups

Reporting group title	Adverse events_Control group
-----------------------	------------------------------

Reporting group description:

An adverse event (AE) is defined as any untoward medical occurrence in a patient administered an investigational medicinal product and which does not necessarily have a causal relationship with this treatment.

Reporting group title	Adverse events_Vit-D group
-----------------------	----------------------------

Reporting group description:

An adverse event (AE) is defined as any untoward medical occurrence in a patient administered an investigational medicinal product and which does not necessarily have a causal relationship with this treatment.

<b>Serious adverse events</b>	Adverse events_Control group	Adverse events_Vit-D group	
Total subjects affected by serious adverse events

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 April 2013	Protocol, version 2, 22-03-2013: Adjust in/exclusion criteria
13 September 2013	Protocol, version 3, 20-08-2013: Addition of new centers
23 December 2015	Protocol, version 4, 25-11-2015: Change of in-and exclusion criteria, reporting certain abnormal lab values as an adverse event
19 October 2017	Protocol, version 5, 27-09-2017: Medication change: from 4 oral syringes of 25000 units to 1 ampoule of 100000 units
26 March 2018	Protocol, version 6, 20-02-2018: Adjustment of Adverse events
25 April 2019	Protocol, version 7, 19-03-2019: Change of address and addition of additional financing
17 May 2021	Protocol, version 8, 05-01-2021: Information about SNPs analysis in lab of VIB

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
