Clinical trial results:
An Extension Study to Evaluate 24 Months of Standard-of-Care Osteoporosis Management Following Completion of 18 Months of BA058 or Placebo Treatment in Protocol BA058-05-003

Summary

EudraCT number	2012-002216-10
Trial protocol	EE DK CZ PL LT
Global end of trial date	03 October 2016

Results information

Result version number	v1
This version publication date	16 October 2020
First version publication date	16 October 2020

Trial information

Trial identification

Sponsor protocol code	BA058-05-005

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01657162
WHO universal trial number (UTN)	-

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 December 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 October 2016
Global end of trial reached?	Yes
Global end of trial date	03 October 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to collect clinical information following 6 months of treatment with alendronate, in participants who have previously received 18 months of blinded treatment with abaloparatide-subcutaneous or placebo in Study BA058-05-003 (EudraCT Number 2012-002216-10). Following the initial 6 months of oral alendronate treatment in the study, participants entered the long-term phase of the study during which participants continued to receive alendronate treatment for an additional 18 months (for a total of 24 months).

Protection of trial subjects:

The study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki in its revised edition (Tokyo, 2004), the guidelines for current Good Clinical Practice (GCP), International Conference on Harmonization (ICH) [Committee for Proprietary Medicinal Products (CPMP)/ICH/135/95], the US Food and Drug Administration (FDA) Code of Federal Regulations (CFR) (21 CFR Parts 50, 54, 56 and 312), Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT) regulations (Argentinean Investigators only), and all other applicable local regulatory and ethical requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 14
Country: Number of subjects enrolled	Brazil: 288
Country: Number of subjects enrolled	Czech Republic: 197
Country: Number of subjects enrolled	Denmark: 203
Country: Number of subjects enrolled	Estonia: 44
Country: Number of subjects enrolled	Hong Kong: 204
Country: Number of subjects enrolled	Lithuania: 33
Country: Number of subjects enrolled	Poland: 77
Country: Number of subjects enrolled	Romania: 63
Country: Number of subjects enrolled	United States: 16
Worldwide total number of subjects	1139
EEA total number of subjects	617

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	220
From 65 to 84 years	916
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Eligible participants who received abaloparatide or placebo in the double-blind study (BA058-05-003 [Study 003]), were enrolled to this open-label extension study. Complete results for Study 003 are reported in the EudraCT Study Record 2010-022576-30.

Pre-assignment

Screening details:

The procedures performed for the Follow-up visit (Month 19) for Study 003 served as Baseline for Day 1 of Study BA058-05-005 (Study 005).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Even though this is an open-label study, participants and Investigators who will be participating in this study (BA058-05-005) will remain blinded to the prior treatment assignment in Study BA058-05-003 (2010-022576-30) until all participants completed the first 6 months of BA058-05-005 for prespecified data analysis. Complete data analysis for Study BA058-05-003 are reported in the EudraCT Study Record 2010-022576-30.

Arms

Are arms mutually exclusive?	Yes
Arm title	Abaloparatide-SC/Alendronate

Arm description:

Participants received 70 milligrams (mg) of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide 80 micrograms (mcg) subcutaneous (SC) daily for 18 months.

Arm type	Experimental
Investigational medicinal product name	Alendronate
Investigational medicinal product code	
Other name	Fosamax, alendronate sodium
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

70 mg orally once per week

Arm title	Placebo/Alendronate

Arm description:

Participants received 70 mg of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide-matching placebo daily for 18 months.

Arm type	Experimental
Investigational medicinal product name	Alendronate
Investigational medicinal product code	
Other name	Fosamax, alendronate sodium
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

70 mg orally once per week

Number of subjects in period 1	Abaloparatide-SC/Alendronate	Placebo/Alendronate
Started	558	581

Completed	499	506
Not completed	59	75
Adverse event, serious fatal	2	3
Consent withdrawn by subject	13	13
Adverse event, non-fatal	26	36
Other than Specified	-	2
Lost to follow-up	3	4
Hypersensitivity to Alendronate	-	1
Refusal of Treatment	4	6
Protocol deviation	1	-
Continuing Significant Deterioration	9	3
Inability to Complete Study Procedures	1	7

Baseline characteristics

Reporting groups	
Reporting group title	Abaloparatide-SC/Alendronate
Reporting group description:	
Participants received 70 milligrams (mg) of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide 80 micrograms (mcg) subcutaneous (SC) daily for 18 months.	
Reporting group title	Placebo/Alendronate
Reporting group description:	
Participants received 70 mg of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide-matching placebo daily for 18 months.	

Reporting group values	Abaloparatide-SC/Alendronate	Placebo/Alendronate	Total
Number of subjects	558	581	1139
Age Categorical Units:			
<65 years	106	114	220
65 to <74 years	351	370	721
≥75 years	101	97	198
Sex: Female, Male Units:			
Female	558	581	1139
Male	0	0	0
Lumbar Spine Bone Mineral Density (BMD) T-Score, n = 556, 581			
BMD data measured by a Dual Energy X-ray Absorptiometry (DXA) instrument manufactured by Lunar Prodigy or Hologic. At Baseline, participants were required to have a BMD T-score ≤2.5 to >-5.0 at the lumbar spine (L1-L4) or if the pre-specified fracture criteria were not met then T-score could be ≤3.0 to >-5.0. All Study BA058-05-003 ITT participants who enrolled in the BA058-05-005 study (Study BA058-05-005 ITT Population) with an evaluable femoral neck BMD T-score. Study BA058-05-003 ITT population included all participants who were randomized into the BA058-05-003 study.			
Units: score on a scale			
arithmetic mean	-2.11	-2.87	
standard deviation	± 0.997	± 0.867	-
Femoral Neck BMD T-Score, n = 555, 581			
BMD data measured by a DXA instrument manufactured by Lunar Prodigy or Hologic. At Baseline, participants were required to have a BMD T-score ≤2.5 to >-5.0 at the femoral neck or if the pre-specified fracture criteria were not met then T-score could be ≤3.0 to >-5.0. All Study BA058-05-003 ITT participants who enrolled in the BA058-05-005 study (Study BA058-05-005 ITT Population) with an evaluable femoral neck BMD T-score. Study BA058-05-003 ITT population included all participants who were randomized into the BA058-05-003 study.			
Units: score on a scale			
arithmetic mean	-1.951	-2.196	
standard deviation	± 0.656	± 0.695	-
Total Hip BMD T-Score, n = 555, 581			
BMD data measured by a DXA instrument manufactured by Lunar Prodigy or Hologic. At Baseline, participants were required to have a BMD T-score ≤2.5 to >-5.0 at the femoral neck or if the pre-specified fracture criteria were not met then T-score could be ≤3.0 to >-5.0. All Study BA058-05-003 ITT participants who enrolled in the BA058-05-005 study (Study BA058-05-005 ITT Population) with an evaluable femoral neck BMD T-score. Study BA058-05-003 ITT population included all participants who			

were randomized into the BA058-05-003 study.			
Units: score on a scale			
arithmetic mean	-1.63	-1.93	
standard deviation	± 0.742	± 0.758	-

End point description:

A TEAE is any untoward medical occurrence or undesirable event(s) experienced in a participant that begins or worsens following administration of study drug, whether or not considered related to study drug by Investigator. An SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason, death, initial or prolonged inpatient hospitalization, life-threatening experience (immediate risk of dying), congenital anomaly/birth defect, or persistent or significant disability/incapacity. Intensity for each AE was defined as mild, moderate, or severe. AEs included both SAEs and non-serious AEs. AEs whose causal relation was characterized as Possible or Probable were considered as related to study drug. AEs were coded using MedDRA. A summary of serious and all other nonserious AEs, regardless of causality, is located in the Reported Adverse Events module. Study 005 Safety Population: all Study 005 ITT participants who received 1 or more doses of alendronate.

End point description:

Coagulation laboratory parameters that were evaluated via notable criteria (presented in parentheses) included: Activated Partial Thromboplastin Time (≥1.41*ULN), Prothrombin Time (≥1.21*ULN). Because the Activated Partial Thromboplastin Time was the only coagulation laboratory parameter with at least 1 participant with a notable laboratory value, this is the only parameter presented below. Study 005 Safety Population: all Study 005 ITT participants who received 1 or more doses of alendronate.

End point type	Secondary

End point timeframe:

Study BA058-05-005 Baseline (Day 1) up to Study BA058-05-005 Month 24

End point values	Abaloparatide-SC/Alendronate	Placebo/Alendronate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	553	580		
Units: participants	9	4		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With a Clinically Notable Urine Laboratory Value (Data From Study BA058-05-005 Only)

End point title	Number of Participants With a Clinically Notable Urine Laboratory Value (Data From Study BA058-05-005 Only)

End point description:

Urine laboratory parameters that were evaluated via notable criteria (presented in parentheses) included: Glucose (2+), Protein (2+), Blood (>50 red blood cells per high-power field [rbc/hpf]). Study 005 Safety Population: all Study 005 ITT participants who received 1 or more doses of alendronate.

End point type	Secondary

End point timeframe:

Study BA058-05-005 Baseline (Day 1) up to Study BA058-05-005 Month 24

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Study BA058-05-005 Baseline (Day 1) up to Study BA058-05-005 Month 24

Adverse event reporting additional description:

Study 005 Safety Population: all Study 005 ITT participants who received 1 or more doses of alendronate. Serious and Non-Serious TEAEs are presented. The "Total # of Deaths Resulting From Adverse Events" is reporting the number of deaths resulting from TEAEs. AEs for Study 003 are reported in the EudraCT Study Record 2010-022576-30.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	17.1

Reporting groups

Reporting group title	Abaloparatide-SC/Alendronate

Reporting group description:

Participants received 70 mg of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide 80 mcg SC daily for 18 months.

Reporting group title	Placebo/Alendronate

Reporting group description:

Participants received 70 mg of alendronate orally once per week beginning on Day 2 for up to 24 months after participating in Study BA058-05-003 during which participants received abaloparatide-matching placebo daily for 18 months.

Serious adverse events	Abaloparatide-SC/Alendronate	Placebo/Alendronate	
Total subjects affected by serious adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 February 2013	In addition to administrative changes and editorial corrections, the protocol was amended to: - extend the duration of the study from 6 months to a total of 24 months - to revise inclusion criteria to extend the visit window from 33 days to 40 days to accommodate participant scheduling - to reflect the elimination of the option of an alternative osteoporosis treatment and to stipulate that only alendronate treatment could be administered.
31 March 2014	In addition to administrative changes and editorial corrections, the following changes to the protocol were made: - Modified to specify that formal statistical analyses (rather than general descriptive descriptions) were to be performed, as appropriate - Modified to clarify the correct alendronate dosage - Modified to provide flexibility in alendronate sourcing - Deleted the need to discuss supplement modification with the study medical monitor - Modified to more accurately describe the sequence of procedures in the protocol - Modified to clarify how the data were to be grouped in the analyses - Modified to clarify the participant populations to be analyzed - Clarified that AEs and clinical laboratory abnormalities at 24 months, rather than 6 months, were to be followed until they were resolved, become chronic, or stable - Definitions of protocol violation and protocol deviation were added to align the protocol with Radius' Protocol Deviation/Violation Procedure Manual (Version 3.0, 1 October 12).
24 August 2015	The following changes were implemented: - The Medical Monitor was changed. - The length of time with positive antibodies to abaloparatide that participants were to be followed was extended, to be continued until the antibody titer is negative.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
