Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 August 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 December 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the relative bioavailability of buprenorphine after oral administration of RBP 6300 (Formulation A) 10 mg as compared to RBP 6300 (Formulation B) 10 mg, when administered in the fasted state.

To assess the relative bioavailability of buprenorphine after oral administration of RBP 6300 (Formulation A) 10 mg to subjects who have been fed a high-fat breakfast as compared to fasted.

Protection of trial subjects:

The Investigator was responsible for ensuring that the clinical study was performed in accordance with the protocol, current International Conference on Harmonisation (ICH) guidelines on Good Clinical Practice (GCP), and applicable regulatory and country-specific requirements. GCP is an international, ethical, and scientific quality standard for designing, conducting, recording, and reporting studies that involve the participation of human subjects. Compliance with this standard provides the public assurance that the rights, safety, and well-being of study subjects are protected, consistent with the principles that originated in the Declaration of Helsinki, 1996, and that the clinical study data are credible.

All informed consent documents and other documents used in the conduct of the study were approved by the IEC. Subjects were given consent documents to review before attending Screening. Prior to the Screening procedures, a medically qualified associate explained to each subject in a group setting the nature of the study, its purpose, procedures, expected duration, alternative therapies available, and the benefits and risks involved in study participation.

Subjects were informed of their right to withdraw from the study at any time without prejudice.

After this explanation, and before any study-specific procedures were performed, the subject voluntarily signed and dated the ICF to indicate their wish to participate in the study. The Investigator or designated subinvestigator also signed and dated the ICF. The time (hour and minute) the ICF was signed was also recorded by the subject and the person obtaining consent from the subject.

Prior to participation in the study, the subject received a copy of the signed and dated ICF along with an emergency card with contact information for the Investigator and site staff in the event of a medical emergency during the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 September 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 50
Worldwide total number of subjects	50
EEA total number of subjects	50

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	50
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 106 subjects were screened and 52 approved for participation. Two approved subjects were designated alternates who were not randomized or dosed.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	All Subjects
-----------	--------------

Arm description:

Subjects were randomized to 1 of 6 treatment arm combinations in this cross-over study. The three treatments (given in the assigned combination order) were 1). RBP-6300 Formulation A (10 mg buprenorphine hemiadipate HCl/10 mg naloxone HCl dihydrate) administered as an oral tablet after an overnight fast of at least 10 hours. 2). RBP-6300 Formulation B (10 mg buprenorphine hemiadipate HCl/10 mg naloxone HCl dihydrate) administered as an oral tablet after an overnight fast of at least 10 hours. 3). RBP-6300 Formulation A administered as an oral tablet within 30 minutes of starting and completing a high-fat breakfast following an overnight fast of at least 10 hours. A single oral tablet of each treatment was given at the beginning of each treatment period followed by a 14 day washout prior to starting the next treatment period.

Arm type	Experimental
Investigational medicinal product name	RBP-6300 Formulation A
Investigational medicinal product code	
Other name	buprenorphine hemiadipate HCl , naloxone HCl dihydrate
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Each Formula A RBP-6300 tablet contains 10 mg buprenorphine hemiadipate HCl [7.20 mg buprenorphine free base] and 10 mg naloxone HCl dihydrate [8.18 mg naloxone free base]. Each dose was a single tablet taken orally in the am, either following a 10 hour fast or following a high-fat breakfast.

Formula A has the same amount of buprenorphine and naloxone as Formula B. However Formula A contains fewer insoluble excipients than Formula B, thus reducing the potential harm to abusers.

Investigational medicinal product name	RBP-6300 Formulation B
Investigational medicinal product code	
Other name	buprenorphine hemiadipate HCl , naloxone HCl dihydrate
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Each Formula B RBP-6300 tablet contains 10 mg buprenorphine hemiadipate HCl [7.20 mg buprenorphine free base] and 10 mg naloxone HCl dihydrate [8.18 mg naloxone free base]. Each dose was a single tablet taken orally in the am following a 10 hour fast.

Formula B has the same amount of buprenorphine and naloxone as Formula A. Formula B has been used in all previous clinical trials with RBP-6300 and contains more insoluble excipients than Formula A.

Investigational medicinal product name	naltrexone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Naltrexone was administered both pre- and post-RBP-6300 dosing in order to minimize the occurrence of unacceptable AEs (eg, decreased respiration, nausea) often associated with the administration of buprenorphine in opiate-naïve, healthy subjects.

Naltrexone 100 mg was given at 13 hours [\pm 1 hour] and at 2 hours [\pm 15 minutes] predose. It was also given 50 mg at 12 hours [\pm 1 hour] and 24 hours [\pm 1 hour] post dose.

Number of subjects in period 1	All Subjects
Started	50
RBP-6300 Formulation A - Fasting	47
RBP-6300 Formulation B - Fasting	47
RBP-6300 Formulation A - High Fat	44
Completed	41
Not completed	9
Consent withdrawn by subject	1
Adverse event, non-fatal	6
Not specified	2

Secondary: Subjects with Treatment-Emergent Adverse Events (TEAEs)

End point title	Subjects with Treatment-Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

Treatment-emergent AEs (TEAEs) were defined as AEs (any untoward medical occurrence) that either commenced following initiation of randomised study treatment or were present prior to randomised study treatment but increased in frequency or severity following initiation of randomised study treatment. TEAEs that occurred following administration of study treatment in Period 1 but before administration of study treatment in Period 2 were attributed to the treatment administered in Period 1 (and the same for Period 2). If the time was missing for an AE on Day 1 of any period, then the AE was attributed to the treatment administered on that day.

The investigator assessed whether a TEAE was likely related to study treatment, and also the severity rating for the TEAE (mild, moderate or severe).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 January 2013	The first amendment, dated 28 January 2013, was approved prior to the initiation of study conduct at Celerion. The purpose of the amendment was to change the PI for the study.
15 August 2013	<p>The second amendment, dated 15 August 2013, was issued to change the clinical facility and PI, change the Medical Monitor, move urine PK from secondary objectives to exploratory objectives, add metabolic profiling as an exploratory objective, clarify urine aliquotting procedures, clarify collection of temperature, define the number of completers required, and add details regarding total blood volume collected. Changes to the procedures for the fed conditions and the volume of water provided at study treatment administration were updated to match the appropriate guidelines. The following changes were also made to make the study procedures more consistent with the other trials in the clinical program:</p> <p>Naltrexone dosing regimen was changed. Inclusion/Exclusion criteria were changed. Telemetry and ECGs were added. Clinical laboratory tests were changed.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
