

Clinical trial results:

A Worldwide, Multicenter, Double-Blind, Randomized, Placebo-Controlled, 12-Week Study to Assess the Efficacy and Tolerability of Anacetrapib When Added to Ongoing Lipid-Lowering Therapy in Adult Patients with Homozygous Familial Hypercholesterolemia (HoFH)

Summary

EudraCT number	2012-002434-37
Trial protocol	GB NO CZ IT
Global end of trial date	05 June 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 June 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 June 2014
Global end of trial reached?	Yes
Global end of trial date	05 June 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This study will evaluate the safety and effect of anacetrapib on low-density lipoprotein-cholesterol (LDL-C) when added to ongoing lipid-lowering therapy. The primary hypothesis is that treatment with anacetrapib 100 mg for 12 weeks will lower LDL-C to a greater extent than treatment with placebo.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 June 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	3 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 2
Worldwide total number of subjects	2
EEA total number of subjects	2

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Study was terminated due to lack of enrollment after 2 participants were randomized. No planned efficacy or safety analyses were performed due to low sample number.

Pre-assignment

Screening details:

Male or female (not of child bearing potential) and 18 years of age or older diagnosed with HoFH by genotyping. Other inclusion and exclusion criteria applied.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Anacetrapib

Arm description:

Participants receive anacetrapib 100 mg orally once daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	Anacetrapib
Investigational medicinal product code	
Other name	MK-0859
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

one 100 mg tablet orally once daily for 12 weeks.

Arm title	Placebo
------------------	---------

Arm description:

Participants received placebo for anacetrapib once daily for 12 weeks

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

one placebo tablet orally once daily for 12 weeks.

Number of subjects in period 1	Anacetrapib	Placebo
Started	1	1
Completed	0	0
Not completed	1	1
Study terminated	1	1

subjects affected / exposed	0 / 1 (0.00%)	1 / 1 (100.00%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Placebo	Anacetrapib 100 mg	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 1 (0.00%)	0 / 1 (0.00%)	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 May 2013	Amendment 1: provided new data on the pharmacokinetic (PK) properties of anacetrapib and related changes to eligibility criteria. The 52-week open label extension phase was removed from the study and a 12-week follow-up period was added. The addition of serial PK measurements during the follow-up period was to be performed to determine the accumulation and clearance of the compound in the HoFH population.
20 November 2013	Amendment 3: removed the 30% cap limiting the number of participants being treated with LDL apheresis that were allowed to enroll in the trial. All participants who were receiving LDL apheresis treatment for at least 8 weeks prior to randomization were allowed to enter the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated early due to poor enrollment after 2 participants were randomly assigned to a treatment arm and dosed. No planned analyses were performed.

Notes:
