

## Clinical trial results:

**A Phase IIa, open-label trial to evaluate the safety, tolerability and efficacy of a 12 weeks combination therapy of TMC647055 and TMC435, with and without GSK2336805 (JNJ-569148745), with a pharmacokinetic enhancer with and without ribavirin in chronic genotype 1 hepatitis C infected patients**

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

## Summary

EudraCT number	2012-002555-42
Trial protocol	BE DE
Global end of trial date	16 December 2014

## Results information

Result version number	v1 (current)
This version publication date	10 June 2016
First version publication date	10 June 2016

## Trial information

### Trial identification

Sponsor protocol code	TMC647055HPC2001
-----------------------	------------------

### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01724086
WHO universal trial number (UTN)	-

## Sponsors

Sponsor organisation name	Janssen Research & Development Ireland
Sponsor organisation address	Eastgate Village, Little Island, Cork, Ireland,
Public contact	Clinical Registry Group, Janssen Research & Development Ireland, clinicaltrialsEU@its.jnj.com
Scientific contact	Clinical Registry Group, Janssen Research & Development Ireland, clinicaltrialsEU@its.jnj.com

Notes:

## Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 December 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 December 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objectives of this study were to evaluate the pharmacokinetics, safety and tolerability of a 12 weeks dosing regimen containing TMC647055/simeprevir(SMV)/ritonavir(RTV) and JNJ-56914845 once daily at selected doses with and without ribavirin (RBV) (2 daily doses) in treatment naïve/prior relapser chronic hepatitis C virus (HCV) genotype1 (GT1)-infected subjects and to evaluate the efficacy of a 12 weeks combination therapy of TMC647055/SMV/RTV once daily at selected doses with RBV (2 daily doses) in treatment-naïve/prior relapser chronic HCV GT1-infected subjects and in treatment-naïve/prior relapser chronic HCV GT1b-infected subjects.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety evaluations included monitoring of adverse events (AEs), clinical laboratory tests (Hematology, Serum chemistry, Urinalysis) vital signs, electrocardiograms (ECG) and physical examination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 September 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 81
Country: Number of subjects enrolled	Germany: 9
Worldwide total number of subjects	90
EEA total number of subjects	90

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	88
From 65 to 84 years	2
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

The study was conducted from 12 Sep 2012 to 16 Dec 2014 and included 90 subjects in 4 panels: Panel 1 and 2 included 31 subjects, Panel 3 included 15 subjects and Panel 4 included 44 subjects.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Panel 1: TMC647055 /Simeprevir /Ritonavir w Ribavirin

Arm description:

Subjects (chronic HCV genotype 1a (GT1a) or 1b (GT1b) infected treatment-naive patients/prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily with ribavirin (RBV) 5 or 6 tablets (depending on body weight) (eq: 200 mg/tablet) per day, divided in 2 doses for 12 weeks

Arm type	Experimental
Investigational medicinal product name	TMC647055
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily for 12 weeks.

Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received simeprevir (TMC435) 75 mg capsule (1 x 75 mg) administered once daily for 12 weeks

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Subjects received ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily for 12 weeks.

Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

**Dosage and administration details:**

Subjects received ribavirin (RBV) 5 or 6 tablet (depending on body weight) (eq. 200 mg/tablet) per day, divided in 2 doses for 12 weeks.

<b>Arm title</b>	Panel 2: TMC647055 /Simeprevir /Ritonavir w/o Ribavirin
------------------	---

**Arm description:**

Subjects (chronic HCV genotype (GT1b) infected treatment-naïve patients/prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily without RBV for 12 weeks

Arm type	Experimental
Investigational medicinal product name	TMC647055
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Subjects received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily for 12 weeks.

Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Subjects received simeprevir (TMC435) 75 mg capsule (1 x 75 mg) administered once daily for 12 weeks

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

**Dosage and administration details:**

Subjects received ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily for 12 weeks.

<b>Arm title</b>	Panel 3: TMC647055 /Simeprevir / Ritonavir w Ribavirin
------------------	--

**Arm description:**

Subjects (chronic HCV GT1a infected treatment naïve patients/prior relapsers) received TMC647055 600 milligram (mg) capsules (4 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 50 mg oral solution (0.625 mL oral solution (80 mg/mL) given once daily with ribavirin (RBV) 5 or 6 tablets (depending on body weight) (eq. 200 mg/tablet) per day, divided in 2 doses for 12 weeks

Arm type	Experimental
Investigational medicinal product name	TMC647055
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Subjects received TMC647055 600 milligram (mg) capsules (4 X 150 mg) given orally once daily for 12 weeks.

Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received simeprevir (TMC435) 75 mg capsule (1 x 75 mg) administered once daily for 12 weeks	
Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Subjects received ritonavir (RTV) 50 mg oral solution (0.625 mL oral solution (80 mg/mL) given once daily for 12 weeks.	
Investigational medicinal product name	Ribavirin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received ribavirin (RBV) 5 or 6 tablet (depending on body weight) (eq. 200 mg/tablet) per day, divided in 2 doses for 12 weeks.	
<b>Arm title</b>	Panel 3: TMC647055 /Simeprevir /Ritonavir w/o Ribavirin
Arm description:	
Subjects (chronic HCV GT1b infected treatment naïve patients/prior relapsers) received TMC647055 600 milligram (mg) capsules (4 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 50 mg oral solution (0.625 mL oral solution (80 mg/mL) given once daily without ribavirin (RBV) for 12 weeks	
Arm type	Experimental
Investigational medicinal product name	TMC647055
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received TMC647055 600 milligram (mg) capsules (4 X 150 mg) given orally once daily for 12 weeks.	
Investigational medicinal product name	Simeprevir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Subjects received simeprevir (TMC435) 75 mg capsule (1 x 75 mg) administered once daily for 12 weeks	
Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use
Dosage and administration details:	
Subjects received ritonavir (RTV) 50 mg oral solution (0.625 mL oral solution (80 mg/mL) given once daily for 12 weeks.	
<b>Arm title</b>	Panel 4: TMC647055 /Simeprevir /Ritonavir /JNJ-56914845 30 mg

**Arm description:**

Subjects (chronic HCV GT1a or GT1b infected treatment-naïve patients/ prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily and JNJ-56914845 30 mg oral tablet (1 x 30mg) once daily for 12 weeks

Arm type	Experimental
Investigational medicinal product name	TMC647055

Reporting group description: Subjects (chronic HCV GT1a or GT1b infected treatment-naïve patients/ prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily and JNJ-56914845 60 mg tablet (2 x 30mg) once daily for 12 weeks	
Subject analysis set title	Panel 1: TMC647055 /Simeprevir /Ritonavir w Ribavirin (GT1a)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects (chronic HCV genotype 1a (GT1a) infected treatment-naïve patients/prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily with ribavirin (RBV) 5 or 6 tablet (depending on body weight) (eq. 200 mg/tablet) per day, divided in 2 doses for 12 weeks	
Subject analysis set title	Panel 1: TMC647055 /Simeprevir /Ritonavir w Ribavirin (GT1b)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects (chronic HCV genotype 1b (GT1b) infected treatment-naïve patients/prior relapsers) received TMC647055 450 milligram (mg) capsules (3 X 150 mg) given orally once daily, simeprevir (TMC435) 75 mg capsule (1 x 75 mg) given once daily, and ritonavir (RTV) 30 mg oral solution (0.375 mL) given once daily with ribavirin (RBV) 5 or 6 tablet (depending on body weight) (eq. 200 mg/tablet) per day, divided in 2 doses for 12 weeks	

**Primary: Number of Subjects With a Sustained Virologic Response (SVR) 12 Weeks After the Actual end of Treatment**

End point title	Number of Subjects With a Sustained Virologic Response (SVR) 12 Weeks After the Actual end of Treatment <sup>[1][2]</sup>
-----------------	---

End point description:

SVR12 is defined as undetectable Hepatitis C Virus at the actual end of treatment and HCV RNA less than 25 IU/mL at 12 Weeks after the actual end of treatment. Intent-to-treat (ITT) analysis set included all subjects who received at least one dose of TMC647055, Simeprevir (SMV), Ritonavir (RTV), or JNJ-56914845.

End point type	Primary
----------------	---------

End point timeframe:

Week 24 (Up to 12 weeks after end-of treatment visit)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistical analysis was performed for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Descriptive statistical analysis was performed for this endpoint.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 August 2012	<p>The sponsor decided to reduce the frequency and maximum duration of the follow up (FU) visits after EOT. This change was also applicable to follow up (FU) visits in case of premature study drug withdrawal. In addition, an SMV 75-mg capsule was added as possible formulation. The posttreatment FU visits were scheduled at Week 4, 8, 12, and 24 after the actual end of treatment (EOT). In case of premature study drug withdrawal, the visit 2 weeks after study drug withdrawal did not change. The posttreatment FU visits at Week 4, 12, and 24 were scheduled for the determination of SVR4, SVR12, and SVR24. The review meetings were updated accordingly. The HCV RNA confirmation test when HCV RNA was detected after previous undetectability was changed from 'within 3' to 'within 4' weeks. This allowed the retest visit to coincide with one of the next scheduled visits. A minor change was made to the virologic stopping rules: an inadequate virologic response needed to be confirmed. For consistency reasons, the primary endpoint safety was added to the primary endpoints. A time window was added to the blood sampling times. A minor change was made to the criteria of the 36 weeks of PegIFN/RBV FU treatment in Panel 3: the FU treatment was also applicable to subjects with HCV RNA detectable at Week 4. A note was added to the hematology panel and urinalysis, giving extra information about what could or was also reported by the laboratory. Flow cytometry was not done in case of an abnormal urinalysis dipstick test. An SMV 75-mg capsule was added as possible formulation. This allowed more flexibility in the choice of the optimal dose. The Cardiovascular Safety Abnormalities was added and the references regarding cardiovascular abnormalities were updated. Minor inconsistencies and errors were corrected. Some clarifications were added. At implementation of the first general protocol amendment, 29 subjects in Panel 1 and 2 had been screened of whom 17 had started treatment.</p>
05 December 2012	<p>The sponsor decided to make the discontinuation of treatment criteria more precise and to streamline the age criteria between 2 of its HCV compounds. The discontinuation of treatment criteria were made more precise to distinguish between treatment-emergent liver-related AEs/abnormalities and abnormal laboratory values that were the consequence of the liver disease. Any related data in other sections were updated for consistency reasons. The age limit was increased up to 70-years-old (in good physical condition) to streamline the age criteria between SMV and TMC647055. If the subject had a positive urine drug test at screening a retesting was allowed after a time interval of minimum 7 days instead of at the same day. This was to exclude one-time and short usage. Minor errors and inconsistencies were corrected and clarifications were made. At implementation of the second general protocol amendment, 45 subjects in Panel 1 and 2 had been screened of whom 31 had started treatment.</p>

24 April 2013	<p>This amendment was made to replace Panel 3. Ongoing review of safety, PK, and HCV RNA data obtained from Panel 1 and 2 indicated that the combination treatment TMC647055 + SMV + RTV with and without RBV was generally safe and well tolerated and that exploration of higher dose levels of TMC647055 and RTV could optimize the PK profile and efficacy of the combination treatment. Therefore, the original third panel of 10 null responders described in the original protocol was replaced by a new panel. In order to optimize the PK profile and efficacy of the combination treatment, the original Panel 3 of null responders was replaced by a panel with 2 treatment arms: Arm 1, 8 HCV GT1a and Arm 2, 8 HCV GT1b treatment-naïve subjects or prior relapsers to a previous IFN-based therapy. The subjects in Panel 3 received a 12-week treatment with TMC647055 600 mg qd, SMV 75 mg qd, and RTV 50 mg qd with (Arm 1) or without (Arm 2) RBV 1,000 to 1,200 mg bid. A 36-week IFN/RBV FU treatment was planned for subjects with HCV RNA <math>\geq 25</math> IU/mL at Week 4. The tentative doses of Panel 1 and 2 were updated to the actual doses. The inclusion criteria were updated to reflect the current practice of confirming the HCV GT and subtype at screening. The data analysis and review meeting time points were updated to allow frequent monitoring of safety, PK, and HCV RNA data instead of at predefined time points. The preliminary statistical analysis was made optional and only occurred if deemed necessary. A brief description of the preliminary safety results was added. Additional information was provided regarding the sample size determination. Plasma concentrations of RTV were not incorporated in an existing population model and C<sub>max</sub> was removed from the PK parameters of SMV that were derived in each subject using Bayesian feedback. The text was updated to reflect the completion of study TMC647055HPC1006.</p>
18 September 2013	<p>This amendment was created to enable Proof-of-Concept data of the addition of the NS5A inhibitor JNJ-56914845 (at 2 dose levels) onto the currently studied regimen of the PI SMV and the NNI TMC647055, boosted by RTV, against HCV GT1a and GT1b. An additional panel (Panel 4) with 2 arms was included to evaluate the safety, PK, and efficacy of the coadministration of SMV 75 mg qd, TMC647055 450 mg qd, RTV 30 mg qd, and JNJ-56914845 (30 and 60 mg qd) for 12 weeks without RBV, in a population of 40 subjects infected with HCV GT1a or GT1b, with a maximum of 16 subjects infected with GT1b, naïve to all hepatitis C treatment or relapsers from previous IFN- and RBV-based treatment. The subjects in this panel did not receive FU treatment. A dose rationale for JNJ-56914845 was added (see Section 3.2). As this study involved SMV, the sun protection measures were updated as recommended by the Food and Drug Administration. At implementation of the forth general protocol amendment, a total of 101 subjects were screened (45 in Panel 1 and 2; 56 in Panel 3 and 4) and a total of 59 had started treatment (31 in Panel 1 and 2; 28 in Panel 3 and 4).</p>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The small sample size only allowed for Proof-of-Concept. No formal hypothesis was made. Statistical analysis for primary endpoint was not performed given the low sample size.

Notes:
