

**Clinical trial results:**

**A MULTI-CENTRE, RANDOMIZED, PLACEBO-CONTROLLED, DOUBLE-BLIND, TWO-ARMED, PARALLEL GROUP STUDY TO EVALUATE EFFICACY AND SAFETY OF INTRAVENOUS (IV) SILDENAFIL IN THE TREATMENT OF NEONATES WITH PERSISTENT PULMONARY HYPERTENSION OF THE NEWBORN (PPHN) OR HYPOXIC RESPIRATORY FAILURE (HRF) AND AT RISK FOR PPHN, WITH A LONG TERM FOLLOW-UP INVESTIGATION OF DEVELOPMENTAL PROGRESS 12 AND 24 MONTHS AFTER COMPLETION OF STUDY TREATMENT**

**Summary**

EudraCT number	2012-002619-24
Trial protocol	BE GB SE ES AT DE NO IT NL DK FR
Global end of trial date	28 September 2020

**Results information**

Result version number	v2 (current)
This version publication date	08 April 2021
First version publication date	17 July 2019

Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000671-PIP01-09

Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 January 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 October 2018
Global end of trial reached?	Yes
Global end of trial date	28 September 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the efficacy and safety of IV sildenafil when added to inhaled nitric oxide (iNO) for the treatment of neonates with PPHN or HRF and at risk for PPHN.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy:

All subjects were treated with iNO.

Evidence for comparator: -

Actual start date of recruitment	05 August 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Denmark: 4
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Norway: 1
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Sweden: 8
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 19

Worldwide total number of subjects	59
EEA total number of subjects	27

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	59
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted in two parts Part A (double-blind phase) and Part B (long-term, non-interventional phase).

### Pre-assignment

Screening details:

Neonates with PPHN or HRF and at risk of PPHN who were receiving iNO treatment were evaluated in this study.

### Period 1

Period 1 title	Part A (Double-blind Phase)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Assessor, Carer, Subject, Monitor, Data analyst

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	IV Sildenafil

Arm description:

Subjects received sildenafil intravenously based on their body weight at a loading dose of 0.1 milligrams per kg (mg/kg) for 30 minutes on Day 1 followed by a maintenance dose of 0.03 milligrams per kg per hour (mg/kg/hr), for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Arm type	Experimental
Investigational medicinal product name	Sildenafil Citrate
Investigational medicinal product code	UK-092,480
Other name	Revatio
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV sildenafil at a loading dose of 0.1 mg/kg, for 30 minutes, on Day 1, followed by maintenance dose of 0.03 mg/kg/hr, for a minimum of 2 days and maximum of 14 days.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Subjects received placebo (0.9 % normal saline or dextrose 10%) at a rate matched to sildenafil infusion, intravenously, based on subject's weight for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo (0.9 percent [%] normal saline or dextrose 10%) intravenously for a minimum of 2 days and maximum of 14 days.

Number of subjects in period 1	IV Sildenafil	Placebo
Started	29	30
Completed	22	18
Not completed	7	12
Consent withdrawn by subject	-	1
Missed 28 day follow-up visit	1	1
Other	-	1
Adverse event	2	2
Insufficient Clinical Response	2	4
Death (during follow-up)	-	1
Death (not completed study treatment)	2	-
Lost to follow-up	-	1
Protocol deviation	-	1

## Period 2

Period 2 title	Part B (Non-Interventional Phase)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	IV Sildenafil

### Arm description:

Subjects received sildenafil intravenously based on their body weight at a loading dose of 0.1 milligrams per kg (mg/kg) for 30 minutes on Day 1 followed by a maintenance dose of 0.03 milligrams per kg per hour (mg/kg/hr), for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Arm type	No intervention
No investigational medicinal product assigned in this arm	
<b>Arm title</b>	Placebo

### Arm description:

Subjects received placebo (0.9 % normal saline or dextrose 10%) at a rate matched to sildenafil infusion, intravenously, based on subject's weight for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Arm type	No intervention
No investigational medicinal product assigned in this arm	

<b>Number of subjects in period 2</b>	IV Sildenafil	Placebo
Started	22	18
Completed	22	17
Not completed	5	9
Death	-	2
No longer willing to participate in study	1	4
Unspecified	2	-
Lost to follow-up	2	3
Joined	5	8
Continued to follow-up	5	8

## Baseline characteristics

### Reporting groups

Reporting group title	IV Sildenafil
-----------------------	---------------

Reporting group description:

Subjects received sildenafil intravenously based on their body weight at a loading dose of 0.1 milligrams per kg (mg/kg) for 30 minutes on Day 1 followed by a maintenance dose of 0.03 milligrams per kg per hour (mg/kg/hr), for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received placebo (0.9 % normal saline or dextrose 10%) at a rate matched to sildenafil infusion, intravenously, based on subject's weight for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.

Reporting group values	IV Sildenafil	Placebo	Total
Number of subjects	29	30	59
Age Categorical			
Safety population included all subjects treated with study treatment.			
Units: Subjects			
Newborns (0-27 days)	29	30	59

Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.	
Reporting group title	Placebo
Reporting group description: Subjects received placebo (0.9 % normal saline or dextrose 10%) at a rate matched to sildenafil infusion, intravenously, based on subject's weight for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.	
Subject analysis set title	Part B (Non-Interventional Phase): IV Sildenafil
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received sildenafil intravenously based on their body weight at a loading dose of 0.1 milligrams per kg (mg/kg) for 30 minutes on Day 1 followed by a maintenance dose of 0.03 milligrams per kg per hour (mg/kg/hr), for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.	
Subject analysis set title	Part B (Non-Interventional Phase): Placebo
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received placebo (0.9 % normal saline or dextrose 10%) at a rate matched to sildenafil infusion, intravenously, based on subject's weight for a minimum of 2 days and maximum of 14 days. Infusion continuation was upon investigator discretion in view of subjects' safety and well-being.	

### Primary: Time on Inhaled Nitric Oxide (iNO) Treatment After Initiation of Intravenous (IV) Study Drug For Subjects Without Treatment Failure

End point title	Time on Inhaled Nitric Oxide (iNO) Treatment After Initiation of Intravenous (IV) Study Drug For Subjects Without Treatment Failure
End point description: Time in days, on iNO treatment, for subjects without iNO treatment failure, was calculated 14 days from the initiation of IV study drug or hospital discharge, whichever occurred first. iNO treatment failure was defined as need for additional treatment targeting PPHN, need for extra corporeal membrane oxygenation (ECMO), or death during the study. The intent-to-treat population (ITT) included all randomized subjects treated with study treatment. Here, "Number of Subjects Analyzed" signifies number of subjects without iNO treatment failure.	
End point type	Primary
End point timeframe: 14 days from the initiation of IV study drug or hospital discharge, whichever occurs first	

<b>End point values</b>	IV Sildenafil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	21	24		
Units: days				
least squares mean (confidence interval 95%)	4.1 (2.58 to 5.58)	4.1 (2.70 to 5.50)		

## Statistical analyses

<b>Statistical analysis title</b>	IV Sildenafil vs. Placebo
Statistical analysis description:	
Field appearing in section: "Number of subjects included in analysis", is an auto populated field from database (sum of number of subjects analyzed for the reporting arms selected to report statistical data): which may not be the actual number of subjects contributing to statistical analysis. Only subjects without treatment failure were included in the analysis.	
Comparison groups	IV Sildenafil v Placebo
Number of subjects included in analysis	45
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.985
Method	ANCOVA
Parameter estimate	Least square (LS) mean difference
Point estimate	0
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.08
upper limit	2.04
Variability estimate	Standard error of the mean
Dispersion value	1.02

## Primary: Treatment Failure Rate

<b>End point title</b>	Treatment Failure Rate
End point description:	
Treatment failure rate was defined as percentage of subjects who needed additional treatment targeting PPHN, needed ECMO, or died during the study. The ITT population included all randomized subjects treated with study treatment.	
End point type	Primary
End point timeframe:	
14 days from the initiation of IV study drug or hospital discharge, whichever occurs first	

End point values	IV Sildenafil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	29	30		
Units: percentage of subjects				
number (confidence interval 95%)	27.6 (11.3 to 43.9)	20.0 (5.7 to 34.3)		

## Statistical analyses

Statistical analysis title	IV Sildenafil vs. Placebo
Comparison groups	IV Sildenafil v Placebo
Number of subjects included in analysis	59
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4935
Method	Chi-squared
Parameter estimate	Difference in percentage
Point estimate	7.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.1
upper limit	29.3

## Secondary: Time From Initiation of Intravenous (IV) Study Drug to Final Weaning of Mechanical Ventilation

End point title	Time From Initiation of Intravenous (IV) Study Drug to Final Weaning of Mechanical Ventilation
End point description:	
Time in days, from initiation of IV study drug to final weaning of mechanical ventilation among subjects achieving final weaning of mechanical ventilation for PPHN was evaluated. Kaplan-Meier method was used for estimation. For subjects with mechanical ventilation beyond 336 hours (14 days) from initiation of IV study drug, data is censored at 14 days. The ITT population included all randomized subjects treated with study treatment.	
End point type	Secondary
End point timeframe:	
14 days from the initiation of IV study drug or hospital discharge, whichever occurs first	

End point values	IV Sildenafil	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	29	30		
Units: days				
median (confidence interval 95%)	8.3 (5.46 to 11.75)	7.3 (5.46 to 10.78)

Comparison groups	IV Sildenafil v Placebo
Number of subjects included in analysis	59
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.9885
Method	Logrank

## Secondary: Time From Initiation of Intravenous (IV) Study Drug to First Treatment Failure

End point title	Time From Initiation of Intravenous (IV) Study Drug to First Treatment Failure
-----------------	--------------------------------------------------------------------------------

### End point description:

Time in days, from initiation of IV study drug to first treatment failure (defined as need for additional treatment targeting PPHN, need for ECMO, or death) for subjects with treatment failure was evaluated. Kaplan-Meier method was used for estimation. For subjects without treatment failure by the endpoint assessment date, data is censored at the endpoint assessment date. The ITT population included all randomized subjects treated with study treatment. Due to low number of subjects with events, Kaplan-Meier estimates of median, upper and lower limit of CI could not be estimated/calculated and has been denoted by "99999", signifying data not available.

End point type	Secondary
----------------	-----------

### End point timeframe:

### **Secondary: Change From Baseline in Oxygenation Index (OI) at Hour 6, 12 and 24**

End point title	Change From Baseline in Oxygenation Index (OI) at Hour 6, 12 and 24
-----------------	---------------------------------------------------------------------

#### **End point description:**

Oxygenation index was calculated as the product of fraction of inspired oxygen (FiO2) and mean airway pressure divided by partial pressure of oxygen dissolved in arterial blood (PaO2) [(FiO2\*mean airway pressure)/PaO2] measured in centimeter of water per millimeter of mercury (cmH2O/mmHg). FiO2 is the measure of oxygen concentration that is breathed. Mean airway pressure is defined as an average of the airway pressure throughout the respiratory cycle. PaO2 is the measure of oxygen level dissolved in

the arterial blood. Here, 'n' = subjects evaluable for this endpoint at specified time points. The ITT population included all randomized subjects treated with study treatment.

## Secondary: Change From Baseline in Differential Saturation at Hour 6, 12 and 24

End point title	Change From Baseline in Differential Saturation at Hour 6, 12 and 24
-----------------	----------------------------------------------------------------------

End point description:

Differential oxygenation saturation is a simple way to detect the right-to-left shunting at ductus arteriosus using 2 pulse oximeters. It is the difference between pre-ductal and post-ductal sites pulse oxygen saturation (SpO2). Where, pre-duct refers to right upper extremity and post-duct refers to lower limb. Oxygenation saturation is measured as percentage of hemoglobin binding sites occupied by oxygen in the blood. Here, 'n' = subjects evaluable for this endpoint at specified time points. The ITT population included all randomized subjects treated with study treatment.

-----------------	-----------------------------------------------------------------------------------------------------------------------------------------

End point description:

The ratio of partial pressure of arterial oxygen to fraction of inspired oxygen is a ratio between the oxygen level in the arterial blood and the oxygen concentration that is breathed. It helps to determine the degree of any problems with how the lungs transfer oxygen to the blood. Here, 'n' = subjects evaluable for this endpoint at specified time points. The ITT population consisted of all randomized subjects treated with study treatment.

## **Secondary: Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)**

End point title	Number of Subjects With Treatment-Emergent Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	---------------------------------------------------------------------------------------------------

End point description:

An AE was any untoward medical occurrence in a subject who received study drug without regard to possibility of causal relationship. A SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly; medically important events. Treatment-emergent are events between first infusion of study drug and up to 31 days after end of study drug infusion (up to 45 days) that were absent before treatment or that worsened relative to pretreatment state. AEs included both SAEs and non-SAEs. The safety population included all subjects treated with study treatment.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Part A: Baseline up to 31 days after end of study drug infusion (up to 45 days); Part B: up to 24 months after end of study treatment in Part A (maximum up to 26 months)

Adverse event reporting additional description:

Same event may appear as both an AE and SAE. An event may be categorized as serious in one subject and as non-serious in another, or a subject may have experienced both a serious and non-serious event. Deaths (all causes) included only treatment emergent serious events. For Part-B (non-interventional) only SAEs and death data was collected.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
