Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 May 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 April 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Part A: To demonstrate the superior clinical efficacy of RPC1063 compared to placebo by showing a reduction in the cumulative number of total gadolinium enhancing (GdE) lesions from Week 12 to Week 24 in patients with relapsing multiple sclerosis (RMS). Part B: To assess whether the clinical efficacy of RPC1063 is superior to IFN-1a (Avonex®) in reducing the rate of clinical relapses at the end of Month 24 in patients with RMS.

Protection of trial subjects:

Patient Confidentiality, Personal Data Protection. This study was conducted in accordance with the guidelines of current Good Clinical Practice including the archiving of essential documents.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 September 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 14

Country: Number of subjects enrolled	United Kingdom: 16
Worldwide total number of subjects	1578
EEA total number of subjects	784

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1578
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Part A of the study was conducted at 55 study centers in 13 countries including the United States, Europe and Russia and consisted of a 24-week placebo-controlled period and an optional 96-week extension period. Part B was performed at 150 sites in North America, Europe, and South Africa with a overall treatment period of 24 months.

Pre-assignment

Screening details:

Part A subjects were randomly assigned to one of two daily doses of ozanimod 0.5 mg or 1 mg or placebo for 24 weeks. Those who completed 24 weeks could enter an extension phase and continue ozanimod 0.5 mg or 1 mg daily; Part B subjects were randomly assigned to one of two daily doses of ozanimod 0.5 mg or 1 mg or weekly Interferon injection.

Period 1

Period 1 title	Overall Study
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

A "dual assessor" approach was used to evaluate efficacy and safety to prevent potential unblinding as result of observed efficacy, adverse events, (AEs) or laboratory changes. A patients treatment group assignment blind was not to be broken until the end of the study unless medical treatment of that patient depended upon knowing whether the patient was receiving active drug.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo (Part A Core)

Arm description:

Participants received placebo capsules (identical in appearance to ozanimod) by mouth (PO) daily during the 24-week placebo-controlled phase. Participants were given the option to enter into a blinded extension phase and were re-randomized to receive ozanimod 0.5 mg or 1mg capsules PO daily for an additional 96 weeks of treatment.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo capsules (identical in appearance to ozanimod) PO daily for 24 weeks

Arm title	Ozanimod 0.5 mg (Part A Core)
------------------	-------------------------------

Arm description:

Participants received ozanimod 0.5 mg capsules PO daily during the 24-week placebo-controlled treatment phase. Participants were given the option to enter into a blinded extension phase and continued to receive ozanimod 0.5 mg capsules PO daily for an additional 96 weeks of treatment.

Arm type	Experimental
Investigational medicinal product name	Ozanimod
Investigational medicinal product code	
Other name	RPC1063
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ozanimod 0.5 mg capsules PO daily for 24 weeks

Arm title	Ozanimod 1 mg (Part A Core)
------------------	-----------------------------

Arm description:

Participants received ozanimod 1 mg capsules PO daily during the 24-week placebo-controlled treatment phase. These participants were given the option to enter into a blinded extension phase and continued to receive ozanimod 1 mg capsules PO daily for an additional 96 weeks of treatment.

Arm type	Experimental
Investigational medicinal product name	Ozanimod
Investigational medicinal product code	
Other name	RPC1063
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ozanimod 1 mg capsules PO daily for 24 weeks.

Arm title	Interferon Beta-1a (IFN β -1a) (Part B)
------------------	---

Arm description:

Participants received IFN β -1a 30 μ g intramuscular (IM) injection weekly and matching placebo capsules (identical in physical appearance to ozanimod) orally daily 24 months.

Arm type	Active comparator
Investigational medicinal product name	Interferon Beta - 1a
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

IFN β -1a 30 μ g intramuscular (IM) injection weekly for two years.

Arm title	Ozanimod 0.5 mg (Part B)
------------------	--------------------------

Arm description:

Participants received ozanimod 0.5 mg capsules PO daily and an intramuscular placebo injection (identical in appearance to interferon) weekly for 24 months.

Arm type	Experimental
Investigational medicinal product name	Ozanimod
Investigational medicinal product code	
Other name	RPC1063
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ozanimod 0.5 mg capsules PO daily for two years

Arm title	Ozanimod 1 mg (Part B)
------------------	------------------------

Arm description:

Participants received ozanimod 1 mg oral capsules daily and an intramuscular placebo injection (identical in appearance to interferon) weekly for 24 months

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Ozanimod
Investigational medicinal product code	
Other name	RPC1063
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ozanimod 1 mg capsules PO daily for two years.

Period 2

Period 2 title	Part A: Blinded Active Extension Phase
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

During the blinded extension phase of Part A, the sponsor and Clinical Research Organization (CRO) were blinded until the Week 24 primary endpoint was reached by all patients and the data through Week 24 was finalized, after which the sponsor and CRO were unblinded to the treatment assignment. Investigators and patients remained blinded throughout the extension phase.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo-Ozanimod 0.5 mg (Part A Extension)

Arm description:

Participants initially randomized to placebo capsules PO daily during the 24-week placebo controlled treatment phase were re-randomized to receive ozanimod 0.5 mg capsules during the optional blinded extension period for an additional 96 weeks of treatment.

Arm type	Experimental
Investigational medicinal product name	RPC1063
Investigational medicinal product code	
Other name	Ozanimod
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ozanimod 0.5 mg capsules PO daily during the 96-week extension phase.

Arm title	Ozanimod 0.5 mg - 0.5 mg (Part A Extension)
------------------	---

Arm description:

Participants received ozanimod 0.5 mg capsules PO daily during the 24-week placebo-controlled treatment phase. Participants were given the option to enter into a blinded extension phase and continued to receive ozanimod 0.5 mg capsules PO daily for an additional 96 weeks of treatment.

Number of subjects in period 2^[1]	Ozanimod 1 mg - 1mg (Part A Extension)
Started	81
Completed	75
Not completed	6
Physician decision	2
Consent withdrawn by subject	2
Adverse event, non-fatal	-
Protocol deviation	-
Lack of efficacy	2

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects were given the option to participate in the blinded active extension phase and some subjects chose not to participate.

Baseline characteristics

Reporting groups

Reporting group title	Placebo (Part A Core)
Reporting group description: Participants received placebo capsules (identical in appearance to ozanimod) by mouth (PO) daily during the 24-week placebo-controlled phase. Participants were given the option to enter into a blinded extension phase and were re-randomized to receive ozanimod 0.5 mg or 1mg capsules PO daily for an additional 96 weeks of treatment.	
Reporting group title	Ozanimod 0.5 mg (Part A Core)
Reporting group description: Participants received ozanimod 0.5 mg capsules PO daily during the 24-week placebo-controlled treatment phase. Participants were given the option to enter into a blinded extension phase and continued to receive ozanimod 0.5 mg capsules PO daily for an additional 96 weeks of treatment.	
Reporting group title	Ozanimod 1 mg (Part A Core)
Reporting group description: Participants received ozanimod 1 mg capsules PO daily during the 24-week placebo-controlled treatment phase. These participants were given the option to enter into a blinded extension phase and continued to receive ozanimod 1 mg capsules PO daily for an additional 96 weeks of treatment.	
Reporting group title	Interferon Beta-1a (IFN β -1a) (Part B)
Reporting group description: Participants received IFN β -1a 30 μ g intramuscular (IM) injection weekly and matching placebo capsules (identical in physical appearance to ozanimod) orally daily 24 months.	
Reporting group title	Ozanimod 0.5 mg (Part B)
Reporting group description: Participants received ozanimod 0.5 mg capsules PO daily and an intramuscular placebo injection (identical in appearance to interferon) weekly for 24 months.	
Reporting group title	Ozanimod 1 mg (Part B)
Reporting group description: Participants received ozanimod 1 mg oral capsules daily and an intramuscular placebo injection (identical in appearance to interferon) weekly for 24 months

Expanded Disability Status Scale (EDSS) Score at Baseline			
The EDSS is a scale for assessing disability in 8 functional systems (visual, brain stem, pyramidal, cerebellar, sensory, bowel & bladder, cerebral, ambulation and other functions). Based on scores in these 8 functional systems, an overall score ranging from 0 (normal) to 10 (death due to MS) was assigned. Participants with EDSS scores of 0.0 to 4.5 are fully ambulatory; patients with EDSS scores of 5.0 to 9.5 have impaired ambulation.

Primary: Part A: The Total Number of Gadolinium-Enhancing Lesions Assessed on Brain Magnetic Resonance Imaging (MRI) from Week 12 to Week 24

End point title	Part A: The Total Number of Gadolinium-Enhancing Lesions Assessed on Brain Magnetic Resonance Imaging (MRI) from Week 12 to Week 24 ^[1]
End point description: The number of gadolinium-enhancing lesions per MRI scan was measured as the total number of Gd-enhancing lesions that occurred from Week 12 to Week 24. Missing GdE data values were imputed using the last valid non-missing, post-baseline observation which was carried forward if the participant was only missing 1 or 2 consecutive post-baseline scans. If there were no post-baseline values to be carried forward or if the participant was missing more than 2 consecutive scans then the mean number of lesions from participants in the same treatment group at the same visit was used as the imputed value. The ITT population is defined as all randomized participants who received at least 1 dose of study drug; participants analyzed according to the treatment they were randomized to receive and not according to what they actually received, if different. Includes participants with non-missing MRI results and included to the analysis population.	
End point type	Primary
End point timeframe: From Week 12 to Week 24	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Part A: The Total Number of Gadolinium-Enhancing Lesions Assessed on Brain Magnetic Resonance Imaging (MRI) from Week 12 to Week 24 statistical analysis was performed in the study for Part A only.

Primary: Part B: Adjusted Annualized Relapse Rate (ARR) at the End of Month 24

End point title	Part B: Adjusted Annualized Relapse Rate (ARR) at the End of Month 24
-----------------	---

End point description:

The relapse rate was based on confirmed relapses. Relapses that met the clinical criteria for a relapse and were accompanied by objective neurological worsening (based upon EDSS evaluated by a blinded EDSS evaluator) were confirmed by a treating investigator. A relapse was defined as new or recurrent neurological symptoms preceded by a relatively stable or improving neurological state of at least 30 days (less than 30 days following the onset of a protocol-defined relapse was considered part of the same relapse). Symptoms must have persisted for >24 hours and should not be attributable to confounding clinical factors. The relapse rate (per person) was calculated as the number of relapses for an individual patient divided by the number of days that patient participated in the study, and multiplied by 365.25. The adjusted ARR was performed using a Poisson regression model. The ITT population included all randomized participants who received at least 1 dose of study drug.

Secondary: Part B: Time to Onset of Disability Progression Confirmed After 3 Months

End point title	Part B: Time to Onset of Disability Progression Confirmed After 3 Months
-----------------	--

End point description:

The Expanded Disability Status Scale (EDSS) is an ordinal scale in half-point increments that quantifies disability progression in MS patients over time. It assesses seven functional (neurologic) systems and ambulation scores that are combined to determine the EDSS score ranging from 1 (normal) to 10 (death due to MS) with higher scores indicating greater disability. The 7 Functional System (FS) scales are: pyramidal, cerebellar, brainstem, sensory, bowel or bladder, visual, and cerebral. Disability progression was defined by a sustained worsening (increase) in EDSS of 1.0 points or more from baseline, confirmed after 3 months. Participants were censored if follow-up ended before a sustained progression occurred, whether due to the patient completing study, withdrawing from the study, or due to the cutoff of data collection for the analysis. The ITT population consisted of all randomized participants who received at least 1 dose of study medication.

End point title	Part B: Change in Multiple Sclerosis Functional Composite (MSFC) Score from Baseline to Month 24 (including the Low-Contrast Letter Acuity test [LCLA] Measurement of Visual Function as a Component)
-----------------	---

End point description:

The MSFC-LCLA is a battery of tests including 4 scales: • The Timed 25-Foot Walk is an ambulation measure of walking 25 feet with time taken recorded in seconds • The 9-Hole Peg Test is a quantitative measure of upper extremity (arm and hand) function • The Symbol Digit Modalities Test is a measure of executive cognitive function that assesses processing speed, flexibility, and calculation ability • LCLA used a standardized set of charts to assess low contrast visual acuity Z-scores were calculated for the MSFC for each component and averaged to create an overall composite Z -score. A z-score represents the number of standard deviations a patient's test result is higher ($z > 0$) or lower ($z < 0$) than the average test result ($z = 0$) of the reference population. A score of +1 indicates that, on average, an individual scored 1 standard deviation better than the reference population and a score of -1 indicates that an individual scored 1 SD worse than the reference population.

End point title	Part B: Number of Participants with Treatment Emergent Adverse Events (TEAEs) During Part B
-----------------	---

End point description:

An AE is any untoward medical occurrence that does not necessarily have a causal relationship with the investigational product (IP). An AE can be any unfavorable or unintended sign, including an abnormal laboratory finding, symptom or disease temporally associated with the use of an IP whether or not considered related to the IP. A TEAE = an AE with a start date on or after the date of first dose of IP to the time that the participant concluded or was terminated in the study. A serious AE (SAE) is any untoward medical occurrence or effect that results in death, is life-threatening, requires hospitalization or prolongation of existing inpatient hospitalization. The investigator assessed the severity of AEs as mild, moderate, or severe. Safety Population consisted of all participants who received at least 1 dose of randomized study medication.

Post-hoc: Summary of Gadolinium-Enhancing Lesion Counts by Visit in the Extension Period

End point title	Summary of Gadolinium-Enhancing Lesion Counts by Visit in the Extension Period
-----------------	--

End point description:

Summary of Gadolinium-Enhancing Lesion Counts by Visit in the Extension Period.

End point type	Post-hoc
----------------	----------

End point timeframe:

From Week 24 to Week 120

End point values	Placebo- Ozanimod 0.5 mg (Part A Extension)	Ozanimod 0.5 mg - 0.5 mg (Part A Extension)	Placebo- Ozanimod 1 mg (Part A Extension)	Ozanimod 1 mg - 1mg (Part A Extension)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	41 ^[54]	85 ^[55]	42 ^[56]	81 ^[57]
Units: Lesions				
geometric mean (standard error)				
Week 24	4.5 (± 13.02)	0.4 (± 1.28)	1.9 (± 5.93)	0.2 (± 0.60)
Week 72	0.4 (± 1.95)	0.4 (± 1.60)	0.1 (± 0.28)	0.2 (± 0.56)
Week 120	0.1 (± 0.46)	0.4 (± 1.49)	0.1 (± 0.37)	0.2 (± 0.51)

Notes:

[54] - Week 72 = 38

Week 120 N = 37

[55] - Week 72 N = 76

Week 120 N = 72

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Day 1 of study drug to the date that the participant concluded or was terminated in the study. AEs are reported for Part A placebo-controlled and extension periods followed by Part B for 2 years.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	15.1
--------------------	------

Reporting groups

Reporting group title	Placebo (Part A Core)
-----------------------	-----------------------

Reporting group description:

Participants received placebo capsules (identical in appearance to ozanimod) PO daily during the placebo-controlled phase (Weeks 0-24).

Reporting group title	Ozanimod 0.5 mg (Part A Core)
-----------------------	-------------------------------

Reporting group description:

Participants received ozanimod 0.5 mg capsules PO daily during the placebo-controlled phase (Weeks 0 to 24).

Reporting group title	Ozanimod 1.0 mg (Part A Core)
-----------------------	-------------------------------

Reporting group description:

Participants received ozanimod 1 mg capsules PO daily during the placebo-controlled phase (Weeks 0 to 24).

Reporting group title	Ozanimod 0.5 mg (Part A Extension)
-----------------------	------------------------------------

Reporting group description:

Participants received ozanimod 0.5 mg capsules PO daily during the blinded extension phase (Weeks 25 to 96).

Reporting group title	Ozanimod 1.0 mg (Part A Extension)
-----------------------	------------------------------------

Reporting group description:

Participants received ozanimod 1 mg capsules PO daily during the blinded extension phase (Weeks 25 to 96).

Reporting group title	Interferon β -1a 30 μ g (Part B)
-----------------------	--

Reporting group description:

Participants received IFN β -1a 30 μ g intramuscular (IM) injection weekly and matching placebo capsules (identical in physical appearance to ozanimod) orally daily for 24 months.

Reporting group title	Ozanimod 0.5 mg (Part B)
-----------------------	--------------------------

Reporting group description:

Participants received ozanimod 0.5 mg oral capsules daily and an intramuscular placebo injection (identical in appearance to Interferon) weekly for 24 months.

Reporting group title	Ozanimod 1.0 mg (Part B)
-----------------------	--------------------------

Reporting group description:

Participants received ozanimod 1 mg oral capsules daily and an intramuscular placebo injection (identical in appearance to Interferon) weekly for 24 months.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 September 2012	1. Modification of the primary objective in Part A from cumulative number of new GdE lesions to cumulative total number of GdE lesions. 2. Addition of a secondary objective in Part A to assess proportion of patients who are free of GdE lesions at Week 24. 3. Modification to treatment duration in Part B to 24 months for all patients. 4. Modification to inclusion/exclusion criteria to remove the exclusion of diagnosis with secondary progressive MS, and to require that patients must discontinue nonlymphocyte-depleting disease-modifying MS agents from signing of the informed consent until randomization. 5. Corresponding changes to study endpoints to accommodate modifications to study objectives in Part A. 6. Change in PK sampling schedule. 7. Addition of QuantiFERON Gold test as alternative to purified protein derivative test for TB screening. 8. Clarification of timing of procedures for Part A patients who elect to enter the blinded extension period after the Week 24 visit. 9. Clarification of unblinding procedure and timing of treatment for relapse. 10. Clarifications to the inclusion/exclusion criteria, study design, study procedures (throughout), Schedule of Assessment and corresponding footnotes, handling missed doses, matching placebo for IFN β -1, allowed/prohibited medications, clinical laboratory procedures, and notifications. Many of the remaining changes were related to consistency within the protocol, addition of clinical laboratory and corresponding contact details, project biostatistician personnel change, correction of typographical errors in the protocol and formatting throughout.
31 July 2013	1. Addition of exploratory endpoint to Part B: "the number of GdE brain MRI lesions at 24 months". 2. Duration of the blinded extension of Part A was increased to at least 48 weeks for all patients (with total duration of Part A of at least 72 weeks, 24 weeks placebo-controlled period and at least 48 weeks blinded extension). 3. Clarifications that for patients continuing to the blinded extension, MRI scans would be performed annually after the Week 24 visit (at approximately Week 72) and/or at the End of-Study Visit. 4. Increase in sample size in Part B to 1200 patients (400 per arm) and modification of sample size justification accordingly. 5. Addition of section on "Considerations for Patients with Comorbid Conditions". 6. Modification to withdrawal criteria and discontinuation of study medication. 7. Modifications to inclusion/exclusion criteria: Inclusion criterion no. 8 – clarification of sexual abstinence, Inclusion criterion no. 9 – clarification regarding proof of immunization for varicella zoster virus, Exclusion criterion no. 7 – specification of excluded cardiac conditions, Exclusion criterion no. 9 – specification of diabetes mellitus history, Addition of exclusion criterion no. 25 on excluded disease modifying therapies, Removal of exclusion criterion regarding B12 deficiency. 8. Modification to statistical methods including Clarification when the interim analysis of Part A would be done, and clarification of the Part B primary analysis per request of FDA. 9. Clarification that dermatological (skin) examination would be done by the investigator, not the dermatologist. 10. Other changes included clarifications to inclusion/exclusion criteria, study design, study procedures (throughout), Schedule of Assessment and corresponding footnotes, number of participating sites in Part A and B, study drug accountability, allowed and prohibited medications, and procedures in case of pregnancy.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
