

## Clinical trial results:

**A multi-centre single-arm study to evaluate the efficacy and safety of BOCEPREVIR 44 weeks in addition to standard of care (SOC) in previously treatment failure (relapser, non-responders, both partial and null) patients with chronic hepatitis C genotype 1 (G1) and cirrhosis (F4 Metavir). (MK-3034-105)**

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 November 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	17 November 2015
Global end of trial reached?	Yes
Global end of trial date	17 November 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This study was done to find out if the addition of boceprevir to standard of care (SOC) treatment with peginterferon alfa-2b (PegIFN-2b) + ribavirin (RBV) is effective for participants with chronic hepatitis C (CHC) genotype 1 and cirrhosis who were not successfully treated by previous SOC. All participants were to receive treatment with SOC alone for 4 weeks and then boceprevir was to be added to the treatment regimen for 44 additional weeks of combined treatment.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research. The following additional measure defined for this individual study was in place for the protection of trial participants: A participant was to be discontinued from all study therapy if they met the per-protocol criteria for virologic failure.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 February 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 58
Worldwide total number of subjects	58
EEA total number of subjects	58

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	38

From 65 to 84 years	20
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study enrolled adult participants with hepatitis C (CHC) genotype 1 and cirrhosis who failed a prior treatment with peginterferon alpha (PegIFN-2b) and ribavirin (RBV). Other inclusion and exclusion criteria applied.

### Pre-assignment

Screening details:

A total of 130 participants were screened. Sixty participants passed screening, but 2 of these participants were excluded before assignment because standard of care treatment was not received during the Lead-in Period.

### Period 1

Period 1 title	Lead-in: Day 0 to Week 4
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Overall Participants
-----------	----------------------

Arm description:

Participants received PegIFN-2b (once weekly, 1.5 µg/kg subcutaneously) + RBV (capsules, orally, weight-based dose from 800-1400 mg/day divided into two daily doses) for 4 weeks during the Lead-in Period and then 44 additional weeks of treatment in the Treatment Period receiving PegIFN-2b (once weekly, 1.5 µg/kg subcutaneously) + RBV (capsules, orally, weight-based dose from 800-1400 mg/day divided into two daily doses) + boceprevir (capsules, orally, 800 mg three times per day). After completion of treatment, follow-up continued for an additional 24 weeks.

Arm type	Experimental
Investigational medicinal product name	Ribivirin
Investigational medicinal product code	
Other name	Rebetol, RBV
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Ribivirin oral capsule weight-based dose from 800-1400 mg/day divided into two daily doses throughout the study

Investigational medicinal product name	Pegintron
Investigational medicinal product code	
Other name	Peginterferon alfa-2b (PegIFN-2b)
Pharmaceutical forms	Powder and solvent for solution for injection in pre-filled pen
Routes of administration	Subcutaneous use

Dosage and administration details:

PegIFN-2b 1.5 µg/kg subcutaneous injection once weekly throughout the study

Number of subjects in period 1	Overall Participants
Started	58
Completed	58

## Period 2

Period 2 title	Treatment/Follow-up: Week 4 to Week 72
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Arm title	Overall Participants
-----------	----------------------

### Arm description:

Participants received PegIFN-2b (once weekly, 1.5 µg/kg subcutaneously) + RBV (capsules, orally, weight-based dose from 800-1400 mg/day divided into two daily doses) for 4 weeks during the Lead-in Period and then 44 additional weeks of treatment in the Treatment Period receiving PegIFN-2b (once weekly, 1.5 µg/kg subcutaneously) + RBV (capsules, orally, weight-based dose from 800-1400 mg/day divided into two daily doses) + boceprevir (capsules, orally, 800 mg three times per day). After completion of treatment, follow-up continued for an additional 24 weeks.

Arm type	Experimental

Routes of administration	Oral use

### Dosage and administration details:

Ribivirin oral capsule weight-based dose from 800-1400 mg/day divided into two daily doses throughout the study

Investigational medicinal product name	Boceprevir
Investigational medicinal product code	
Other name	Victrelis, BOC
Pharmaceutical forms	Capsule
Routes of administration	Oral use

### Dosage and administration details:

Boceprevir 800 mg oral capsule three times daily during the Treatment Period (Week 4 to Week 48)

<b>Number of subjects in period 2</b>	<b>Overall Participants</b>
Started	58
Treated in Treatment Period	54
Completed	23
Not completed	35
Consent withdrawn by subject	4
Adverse event, non-fatal	5
No information available	2
No boceprevir during Treatment Period	4
Lack of efficacy	20

## Baseline characteristics

### Reporting groups

Reporting group title	Lead-in: Day 0 to Week 4
-----------------------	--------------------------

Reporting group description: -

Reporting group values	Lead-in: Day 0 to Week 4	Total

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 December 2013	Amendment 1: The visit window was changed from 2 to 3 days; the limit for diagnosis of cirrhosis by elastography was changed from 0.20 to 0.30; details on contraception with reference to boceprevir were added; details on exclusion based on oesophageal varices were added as replacement of a former exclusion criterion; details on exclusion for limits of total bilirubin were added and direct bilirubin was replaced by total bilirubin; exclusion criterion applicable to use of prohibited medications was added; criteria for assignment of screening number and treatment number were detailed; storage procedures for ribavirin were changed; procedures for co-administration of boceprevir with an oral contraceptive were detailed; duration of post-study contraception for males and females was added; rules for dose modification of ribavirin were added; other minor or typographic changes were made effective.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
