Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 April 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 April 2016
Global end of trial reached?	Yes
Global end of trial date	09 April 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This was a double-blind, placebo-controlled, randomized withdrawal trial to assess the time to recurrence of any mood episode in subjects with bipolar I disorder who had maintained stability on aripiprazole IM depot for at least 8 weeks.

Protection of trial subjects:

In accordance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Consolidated Guideline¹ and the applicable local laws and regulatory requirements of the countries in which the trial was conducted, copies of the protocol, amendments, and informed consent form (ICF) were reviewed and approved by the governing institutional review board (IRB) or independent ethics committee (IEC) for each investigational site or country, as appropriate, prior to trial start or prior to implementation of the amendment at that site or country. This trial was conducted in compliance with the protocol, ICH GCP and applicable local laws and regulatory requirements.

Note: All subjects were 18 to 65 years of age, inclusive, at time of informed consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 August 2012
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Poland: 10
Country: Number of subjects enrolled	Japan: 40
Country: Number of subjects enrolled	Korea, Republic of: 23
Country: Number of subjects enrolled	Romania: 34
Country: Number of subjects enrolled	Taiwan: 7
Country: Number of subjects enrolled	United States: 608
Worldwide total number of subjects	731
EEA total number of subjects	44

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	726
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This trial was conducted in 1175 participants (including screen failures) at 103 trial sites in the following 7 countries: Canada, Japan, Republic of Korea, Poland, Romania, Taiwan, and the United States (US).

Pre-assignment

Screening details:

The trial consisted of a screening phase and 4 phases. In phases A-C (Conversion, Oral Stabilization and Depot Stabilization Phases), there was a single treatment group. In phase D (Double-blind, placebo-controlled phase), there were 2 treatment groups. All Outcome Measures were assessed in the double-blind, placebo-controlled phase of the study.

Period 1

Period 1 title	Oral Conversion Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	All patients
-----------	--------------

Arm description:

During the Oral Conversion Phase, patients were cross-titrated from other antipsychotics to oral non-generic aripiprazole monotherapy.

Arm type	Experimental
Investigational medicinal product name	Aripiprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral aripiprazole (The goal was to achieve a monotherapy target starting dose of 15mg/day at week 4 and no later than week 6) of the Conversion Phase.

Number of subjects in period 1	All patients
Started	466
Completed	367
Not completed	99
Consent withdrawn by subject	32
Withdrawn by the investigator	3
Adverse events	33
Met withdrawal criteria	10
Lost to follow-up	16
Lack of efficacy	2
Protocol deviation	3

Period 2

Period 2 title	Oral Aripiprazole Stabilization Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	All patients
------------------	--------------

Arm description:

During the Oral Stabilization Phase, patients were stabilized on an oral dose of aripiprazole. 632 subjects entered the Oral Stabilization Phase (367 subjects entered from the Conversation Phase and 265 subjects entered the Oral Stabilization Phase directly)

Arm type	Experimental
Investigational medicinal product name	Aripiprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Open-label oral aripiprazole monotherapy (Oral aripiprazole dose ranging from 15 to 30 mg daily)

Number of subjects in period 2	All patients
Started	367
Completed	425
Not completed	207
Consent withdrawn by subject	45
Withdrawn by the investigator	2
Adverse events	63
Met withdrawal criteria	41
Lost to follow-up	44
Lack of efficacy	12
Joined	265
Subjects entered Oral Stabilization Phase directly	265

Period 3

Period 3 title	IM Depot Stabilization Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator ^[1]

Arms

Arm title	All patients
------------------	--------------

Arm description:

During the Depot Stabilization Phase, patients were stabilized on aripiprazole IM depot. The subjects were assigned to aripiprazole IM depot in the IM Depot Stabilization Phase for a minimum of 12 weeks and a maximum of 28 weeks. To proceed to the Double-blind, Placebo-controlled Phase, subjects were required to meet all the protocol-defined stability criteria for a minimum of 8 consecutive weeks (4 consecutive biweekly visits).

Arm type	Experimental
Investigational medicinal product name	Intramuscular (IM) Depot Aripiprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single-blind fashion, aripiprazole IM depot 400 mg, irrespective of the final oral dose of aripiprazole in Phase B. A single decrease to 300 mg was permitted, as was a single return to 400 mg, if required, in addition oral aripiprazole during the first 2 weeks to maintain therapeutic levels

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: An unblinded site study drug manager prepared and administered the single-blind IM depot injections every 4 weeks throughout the IM Depot Stabilization Phase.

Number of subjects in period 3	All patients
Started	425
Completed	266
Not completed	159
Consent withdrawn by subject	56
Withdrawn by the investigator	6
Adverse events	37
Met withdrawal criteria	26
Lost to follow-up	21
Sponsor discontinued study	1
Lack of efficacy	7
Protocol deviation	5

Period 4

Period 4 title	Double-blind Placebo-controlled Phase
Is this the baseline period?	Yes ^[2]
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Aripiprazole Depot
------------------	--------------------

Arm description:

Patients received aripiprazole 300 mg or 400 mg depot intramuscularly up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Intramuscular (IM) Depot Aripiprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Intramuscular (IM) Depot Aripiprazole Formulation 400 mg or 300 mg, once a month injection

Arm title	Placebo
------------------	---------

Arm description:

Patients received placebo intramuscularly up to 52 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intramuscular use

Dosage and administration details:

IM Depot Placebo 400 mg or 300 mg, once a month injection.

Notes:

[2] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: In this study, Period 4 (Double-blind Placebo controlled Phase) was chosen as the baseline period and Baseline measures are based on the participants from the Double-blind Placebo-controlled Phase.

Number of subjects in period 4^[3]	Aripiprazole Depot	Placebo
Started	133	133
Completed	64	38
Not completed	69	95
Consent withdrawn by subject	13	10
AE without recurrence of any mood episode	7	1
Recurrence of any mood episode with AE	16	33
Recurrence of any mood episode without AE	19	35
Met withdrawal criteria	4	7
Lost to follow-up	8	5

Sponsor discontinued study	1	3
Protocol deviation	1	1

Notes:

[3] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Since the results presented are of Period 4, this was chosen as the baseline period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 June 2012	Amendment Number 1: This amendment served to reflect a number of clarifications and additions to study procedures intended to enhance subject safety and accuracy of data. In addition, a number of administrative clarifications were made, including changes to text to enhance readability and correct typographical errors.
29 October 2013	Amendment Number 2: This second amendment reflected clarifications and additions to study procedures, statistical methods, and inclusion/exclusion criteria intended to enhance subject safety and accuracy of data. In addition, administrative clarifications were made, including changes to text to enhance readability and consistency and correct typographical errors.
19 June 2014	Amendment Number 3: This third amendment provided for continuation of the trial at Japanese sites if Trial 31-08-250 was terminated early for any reason other than safety in order to meet the randomization requirement specified by the Pharmaceutical and Medical Devices Agency.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
