Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 August 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 July 2013
Global end of trial reached?	Yes
Global end of trial date	30 July 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is the determination of the recommended standard treatment dose of FSH-GEX™ as assessed by follicle growth dynamics in women between 18 and 37 years of age undergoing intracytoplasmic sperm injection (ICSI) treatment.

Protection of trial subjects:

Patients were closely monitored and seen daily or every-other day by their Investigators.

Background therapy:

Triptorelin acetate (Decapeptyl® in Germany, Gonapeptyl® in Hungary), a gonadotropin releasing hormone agonist, was administered to all patients for down-regulation. Triptorelin acetate (100 µg) was administered once daily subcutaneously.

Recombinant hCG:

A human recombinant chorionic gonadotropin (Ovitrelle® in Germany and Hungary) was administered to all patients for stimulation of follicle maturation prior to IVF procedures. Recombinant hCG (250 µg) was administered as one single dose subcutaneously according to the instructions of the investigator.

Progesterone:

A progesterone derivative (Crinone® in Germany and Hungary) was administered to all patients for luteal support. Progesterone (90 mg) gel was administered once daily by vaginal application.

Evidence for comparator:

Gonal-f®, a recombinant human FSH, was the comparator drug used in this study.

Gonal-f® has been used as comparator in the two Phase 1 studies. It is widely used and comprises a broad documentation of efficacy and safety.

Actual start date of recruitment	08 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 147
Country: Number of subjects enrolled	Hungary: 120
Worldwide total number of subjects	267
EEA total number of subjects	267

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	267
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

During the study period from 08-Jan-2013 to 30-Jul-2013, a total of 267 patients were enrolled in six study centers in Germany and in two centers in Hungary.

Pre-assignment

Screening details:

Of the 267 patients enrolled, 9 were screening failures: 5 patients violated inclusion criterion 4 (AMH level of 1 to 4 ng/mL), 1 patient violated inclusion criterion 6 (BMI 18.5-30 kg/m²), 1 patient fulfilled exclusion criterion 14 (history of thrombosis or other risk factors), and 2 patients violated inclusion criterion 10 (comply with protocol)

Pre-assignment period milestones

Number of subjects started	267
Intermediate milestone: Number of subjects	Starting Down-regulation: 258
Number of subjects completed	247

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Adverse event, non-fatal: 2
Reason: Number of subjects	Consent withdrawn by subject: 2
Reason: Number of subjects	Protocol deviation: 9
Reason: Number of subjects	pregnancy: 4
Reason: Number of subjects	non-compliance: 1
Reason: Number of subjects	treatment failure: 2

Period 1

Period 1 title	Assessor-blind treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor ^[1]

Blinding implementation details:

Blinding of the patient was not possible. Study blind was maintained using an "independent" third party; the drug administrators in each center, e.g. a physician or nurse, who was not involved in any study assessments, received the randomization information regarding the treatment allocation. Investigator, who was performing all assessments, and the embryologist, who was performing the counting of the oocytes as well as evaluating the oocyte maturity and quality, were blinded during the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment 1
Arm description:	
Patients received FSH-GEX: 52.5 IU QD	
Arm type	Experimental

Investigational medicinal product name	FSH-GEX
Investigational medicinal product code	
Other name	follitropin epsilon
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage: 52.5 IU QD

Dosage form: Solution for subcutaneous injection, provided in single-use vials.

Strength: 750 IU/ml.

Volume:0.5 ml/vial (375 IU/vial).

Excipients: Sucrose, disodium phosphate dihydrate, sodium dihydrogen phosphate monohydrate, methionine, and poloxamer 1886

Arm title	Treatment 2
------------------	-------------

Arm description:

Patients received FSH-GEX: 75 IU QD

Arm type	Experimental
Investigational medicinal product name	FSH-GEX
Investigational medicinal product code	
Other name	follitropin epsilon
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage: FSH-GEX: 52.5 IU QD

Dosage form: Solution for subcutaneous injection, provided in single-use vials.

Strength: 750 IU/ml.

Volume:0.5 ml/vial (375 IU/vial).

Excipients: Sucrose, disodium phosphate dihydrate, sodium dihydrogen phosphate monohydrate, methionine, and poloxamer 1886

Arm title	Treatment 3
------------------	-------------

Arm description:

Patients received FSH-GEX: 112.5 IU QD

Arm type	Experimental
Investigational medicinal product name	FSH-GEX
Investigational medicinal product code	
Other name	follitropin epsilon
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage 112.5 IU QD

Arm title	Treatment 4
------------------	-------------

Arm description:

Patients received FSH-GEX:150 IU QD

Arm type	Experimental
Investigational medicinal product name	FSH-GEX
Investigational medicinal product code	
Other name	follitropin epsilon
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage: 150 IU QD

Arm title	Treatment 5
------------------	-------------

Arm description:	
Patients received FSH-GEX: 150 IU QAD	
Arm type	Experimental
Investigational medicinal product name	FSH-GEX
Investigational medicinal product code	
Other name	follitropin epsilon
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage: 150 IU QAD

Arm title	Treatment 6
------------------	-------------

Arm description:

Patients received Gonal-f: 150 IU QD

Arm type	Active comparator
Investigational medicinal product name	Gonal-f
Investigational medicinal product code	
Other name	follitropin alfa
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Dosage 150 IU QD

Dosage form: Powder and solvent for solution for injection.

Appearance of powder: Lyophilized white pellet, provided in vials (glass).

Appearance of solvent: Clear colorless solution, provided in pre-filled syringe (glass).

Excipients: Powder: sucrose, sodium dihydrogen phosphate monohydrate, disodium phosphate dehydrate, methionine, polysorbate 20, phosphoric acid (concentrated), sodium hydroxide, and solvent: water for injections

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: Blinding of the patient was not possible. Study blind was maintained using an "independent" third party; the drug administrators in each center, e.g. a physician or nurse, who was not involved in any study assessments, received the randomization information regarding the treatment allocation. Investigator, who was performing all assessments, and the embryologist, who was performing the counting of the oocytes as well as evaluating the oocyte maturity and quality, were blinded during the study.

Number of subjects in period 1^[2]	Treatment 1	Treatment 2	Treatment 3
Started	41	42	40
Meeting hCG criteria	38	40	38
Completed	38	40	38
Not completed	3	2	2
Physician decision	1	1	1
Adverse event, non-fatal	-	1	-
Lack of efficacy	2	-	1

Number of subjects in period 1^[2]	Treatment 4	Treatment 5	Treatment 6
Started	43	42	39
Meeting hCG criteria	41	41	37

Completed	41	41	37
Not completed	2	1	2
Physician decision	-	-	-
Adverse event, non-fatal	-	-	1
Lack of efficacy	2	1	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline values were only taken from patients who fulfilled criteria for starting with experimental treatment

Notes:

[1] - The primary analysis was conducted based on the ITT population using sequential (hierarchical) testing for the pair-wise comparison of the four FSH-GEX™ daily dosing regimens with Gonal-f® 150 IU per day. Each of these comparisons was performed using an analysis of covariance (ANCOVA) model, which included treatment (two levels) and site as factors and age as a covariate.

[2] - Given the one sided hypotheses to be tested, the analysis of treatment effects was performed as one-sided tests at a significance level of 0.025.

lower limit	-1.03
upper limit	4.05
Variability estimate	Standard deviation
Dispersion value	0.24

Notes:

[15] - The primary analysis was conducted based on the ITT population using sequential (hierarchical) testing for the pair-wise comparison of the four FSH-GEX™ daily dosing regimens with Gonal-f® 150 IU per day. Each of these comparisons was performed using an analysis of covariance (ANCOVA) model, which included treatment (two levels) and site as factors and age as a covariate.

[16] - Given the one sided hypotheses to be tested, the analysis of treatment effects was performed as one-sided tests at a significance level of 0.025.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent AEs were defined as AEs occurring or worsening with an onset at the time of or following the first administration of IMP (FSH-GEX or Gonal-f).

Adverse event reporting additional description:

FSH (both FSH-GEX and Gonal-f) was to be administered once daily for a maximum duration of 18 days, with the exception of the FSH-GEX 150 IU QAD group, where patient were to receive treatment every second day.

Assessment type	Systematic

occurrences (all)	7	7	7

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 March 2013	<p>The Sponsor amended the protocol in order to</p> <ol style="list-style-type: none">determine the FSH concentration in serum during the FSH treatment period in order to ex-plore the exposure-response relationship. Blood sampling for the analysis of FSH serum concentrations should be performed on Day 1 and Day 2 of FSH treatment and at least every second day thereafter as well as on visit 4 (record of hCG criterion). <p>Since these sampling timepoints corresponded to serum samples taken for the central lab un-der the current protocol (version 1.0) no additional blood sampling was required. Also, no in-crease in blood sampling volumes, either of individual samples or in total, was required.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
