

Clinical trial results:

Prospective, open-label, multicentre clinical trial, phase I/IIa, to investigate the safety and tolerability of allogeneic B-cell concentrates CD3+-depleted, CD19+-enriched, cryopreserved (single administration after day 120 following allogeneic stem cell transplantation, donor-identical) in 4 groups with escalating doses for immune response enhancement, measured as response to a preponed single vaccination

Summary

EudraCT number	2012-003033-42
Trial protocol	DE
Global end of trial date	21 March 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 March 2018
Global end of trial reached?	Yes
Global end of trial date	21 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the safety and tolerability of escalating doses of the study medication in patients after allogeneic stem cell transplantation (donor-identical)

Protection of trial subjects:

Treatment with antihistamines 30min Prior to IMP Administration to avoid allergic reactions; cardiopulmonal Monitoring during the first 4 Hours following IMP Administration; inpatient Setting for at least 18 Hours following IMP Administration; sterility testing Prior to IMP Administration to avoid Transmission of infectious agents; only patients at low Risk for EBV reactivation and GvHD could be enrolled

Background therapy:

Additional pilot vaccination with Pentavac (Diphtherie, Tetanus, pertussis, Polio, HiB) and Prevenar 13 (Pneumokokken) at day 8 +/- 3 days after IMP Administration to determine the functionality of transferred B lymphocytes.

Basic immunization following stem cell transplantation according EBMT scheme

Evidence for comparator: -

Actual start date of recruitment	01 July 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 28
Worldwide total number of subjects	28
EEA total number of subjects	28

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	22
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

male or female subjects, 18 - 75 years, with Status post allogeneic SCT 120 - 160 days before IMP Administration; EBV-serostatus as follows: R-/D- or R+/D- or R+/D+; no EBV reactivation > 10.000 copies/ml, no acute GvHD grade III or IV, no chronic GvHD (middle/high Risk accord. to NIH staging), initial donor willing to participate in leukapheresis

Period 1

Period 1 title	Screening
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 September 2013	Changes due to deficiency letter
28 July 2014	NIMP: altern. vaccination allowed
20 June 2016	Dose Level IV changed from 4x10.000.000 cells/kg bw to 3-4x10.000.000 cells/kg bw (manufacturing issue)

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
