Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 September 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 September 2014
Global end of trial reached?	Yes
Global end of trial date	30 September 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and tolerability profile of multiple-dose, every 14-day, intravenous (iv) administration of XmAb5871 in patients with RA

Protection of trial subjects:

In Part A, a sentinel dosing strategy was used for the first dose of Cohort 1. The first 2 patients in Cohort 1 were randomized such that 1 patient received XmAb5871 and 1 patient received placebo. This sentinel pair were dosed first and were observed for 48 – 72 hours before study drug was administered to the remainder of the cohort. For all remaining cohorts, no more than 3 patients were infused on any given day.

Dose escalation to the next cohort occurred after review by the Dose Escalation Safety Committee (DESC) of safety data up to at least Day15 for all patients in a cohort. Progression to the next higher dose only occurred if the previous dose level was deemed to be safe and well tolerated by the DESC.

Background therapy:

Currently taking methotrexate (MTX) consecutively for ≥ 12 weeks and on a stable dose of oral or subcutaneous MTX at 7.5-25 mg weekly for ≥ 4 weeks at randomisation visit. A lower MTX dose was accepted if it was the highest tolerated dose; however, toxicity documentation by the Investigator was required.

All patients were to take folic acid to minimize toxicity, according to local guidelines.

Evidence for comparator:

Not applicable - comparator was standard of care for the disease plus placebo.

Actual start date of recruitment	19 December 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 27
Country: Number of subjects enrolled	Czech Republic: 8
Country: Number of subjects enrolled	Hungary: 22
Worldwide total number of subjects	57
EEA total number of subjects	57

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	46
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were enrolled from 3 countries: Poland, Czech Republic and Hungary. Screening of patients in to Part A lasted from 19 Dec 2012 to 16 Jul 2013. Screening of patients in to Part B began on 02 Sept 2013 and ended on 07 Apr 2014. The last patient was randomised in to the study 15 Apr 2014.

Pre-assignment

Screening details:

Subjects dropping-out or withdrawing, for any reason, without completing all screening evaluations successfully, were considered as "screening failures". Such subjects did not receive a subject number, and no data were collected in the eCRFs. The Investigator kept a screening log of all subjects screened.

Period 1

Period 1 title	Part A (Cohorts 1-4)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

30 patients in Part A (23 XmAb5871, 7 placebo)

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A (Active)

Arm description:

Patients treated with active treatment

Arm type	Experimental
Investigational medicinal product name	XmAb5871
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

XmAb5871 at one of 4 doses (0.3, 1.0, 3.0, 10.0 mg/kg) was administered as an iv infusion over 2 hours every 14 days for 6 doses. XmAb5871 drug product was a liquid product supplied in single-use glass vials.

Arm title	Part A (Placebo)
------------------	------------------

Arm description:

Patients treated with placebo treatment

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo of equal volume to match XmAb5871 was administered by iv infusion over 2 hours. The placebo solution was a vehicle control (10 mM sodium phosphate, 150 mM sodium chloride with 0.01% (w/v) polysorbate 20, pH 7.2)

Number of subjects in period 1 ^[1]	Part A (Active)	Part A (Placebo)
Started	22	7
Completed	21	7
Not completed	1	0
Adverse event, non-fatal	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The patient enrollment in to Part A does not correspond with enrollment in to Part B. Part B was an expansion Cohort and included the enrollment of a different group of patients, in accordance with the protocol.

Period 2

Period 2 title	Part B (Cohort 5)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

27 patients in Part B (18 XmAb5871, 9 placebo)

Arms

Are arms mutually exclusive?	Yes
Arm title	Part B (Placebo)

Arm description:

Patients treated with placebo treatment

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo of equal volume to match XmAb5871 was administered by iv infusion over 2 hours. The placebo solution was a vehicle control (10 mM sodium phosphate, 150 mM sodium chloride with 0.01% (w/v) polysorbate 20, pH 7.2)

Arm title	Part B (Active)
-----------	-----------------

Arm description:

Patients treated with active treatment

Arm type	Experimental
Investigational medicinal product name	XmAb5871
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

XmAb5871 administered to an expansion cohort (Cohort 5), to further investigate one of the doses previously studied in Part A (10 mg/kg), administered as an iv infusion over 2 hours every 14 days for 6 doses. XmAb5871 drug product was a liquid product supplied in single-use glass vials.

Number of subjects in period 2^[2]	Part B (Placebo)	Part B (Active)
Started	9	18
Completed	8	15
Not completed	1	3
Consent withdrawn by subject	1	1
Adverse event, non-fatal	-	2

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The patient enrollment in to Part A does not correspond with enrollment in to Part B. Part B was an expansion Cohort and included the enrollment of a different group of patients, in accordance with the protocol.

Primary: Safety and Tolerability

End point title	Safety and Tolerability ^[1]
End point description:	
Safety and tolerability assessments consisted of AEs, vital signs, electrocardiogram (ECG), clinical laboratory, immunogenicity and physical examination. Assessments were performed according to the time points defined in the schedules of assessments. Data presented is number of patients with Treatment Emergent AEs (TEAEs) and number of patients confirmed as positive for anti-XmAb5871 antibodies (ADA).	
End point type	Primary
End point timeframe:	
From Randomisation (Day -1) to Day 169	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: For this explorative study, no prospective calculations of statistical power were made. The sample size was selected to provide information on safety, tolerability, PK, efficacy and PD following single and multiple doses of XmAb5871.

Descriptive statistics were provided for selected demographic, safety, PK, PD, and biomarker data by cohort. Descriptive statistics on continuous data includes means, medians, SDs and ranges, while categorical data may be summarized using frequency counts and %s.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were recorded at each clinic visit from signing of the Informed Consent Form until completion of the End of Study visit.

Adverse event reporting additional description:

At every patient visit, patients were asked non-leading questions to determine the occurrence of AEs. In addition, all AEs reported spontaneously during the course of the clinical study were recorded.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 October 2012	<p>Amendment 1 applied to the Czech Republic only. The CSP was amended on 29 October 2012, primarily to comply with the recommendations received from Competent Authority Statni Ustav Pro Kontrolu Leciv (State Institute for Drug Control) in Czech Republic. However, Amendment 1 was not formally approved because the Sponsor withdrew submission on 07 November 2012.</p> <p>The changes implemented in Amendment 1 were as follows:</p> <ol style="list-style-type: none">1. The upper limit of the age of the participating subjects in Part A of the clinical study was reduced from 70 to 65 years2. The subjects were to follow-up for 72 hours post end of infusion for first dosing and 24 hours for the subsequent dosings; as a result, all outpatient visits up to the last dosing were changed from outpatient into inpatient visits3. The subjects with known residential exposure to an individual with tuberculosis prior to or during screening (if not treated with appropriate chemoprophylaxis) or positive Quantiferon test at screening were excluded
15 January 2013	<p>The Clinical Study Protocol was amended primarily to enhance subjects' safety, to increase scientific validity, to improve feasibility of the clinical study, and to correct mistakes and inconsistencies detected in Protocol Version 1.0 dated 31 July 2012.</p> <p>Amendment 2, dated 15 January 2013, applied for Hungary, Poland, Romania and the Slovak Republic only. A separate protocol amendment was prepared for the Czech Republic in compliance with recommendations received from the Czech Competent Authority.</p> <p>The major changes implemented in the present Amendment 2 were as follows:</p> <ol style="list-style-type: none">1. Exclusion of subjects with positive Quantiferon test at screening.2. Assessment of some additional safety laboratory parameters.3. Adding of time point for vital signs assessment at 15 minutes after end of infusion; clarification of time points for vital signs assessment on dosing days and on non dosing days.4. Prolongation of fasting period for the subjects before dosing, and waiving of obligation to fast before blood sampling except screening and Day -1.5. Change of time points for blood sampling for PK on non-dosing days.6. Collecting an additional blood sample for Biomarker Development.7. Clarification of consequences following occurrence of significant safety events with respect to interruption of dose escalation.8. Correction of criteria given for ACR classification of functional capacity.

19 January 2013	<p>Amendment 3 applied to the Czech Republic only. The CSP was amended on 19 January 2013, primarily to enhance subjects' safety, to increase scientific validity, to improve feasibility of the clinical study, and to correct mistakes and inconsistencies detected in Clinical Study Protocol Version 2.0, dated 29 October 2012.</p> <p>A part of the changes that were addressed in this amendment were already implemented in Amendment 1. The major changes implemented in Amendment 3, dated 19 January 2013 were as follows:</p> <ol style="list-style-type: none"> 1. Assessment of some additional safety laboratory parameters. 2. Adding of time point for vital signs assessment at 15 minutes after end of infusion; clarification of time points for vital signs assessment on dosing days and on non dosing days. 3. Prolongation of fasting period for the subjects before dosing, and waiving of obligation to fast before blood sampling except screening and Day -1. 4. Change of time points for blood sampling for PK on non-dosing days. 5. Collection of an additional blood sample for Biomarker Development. 6. Clarification of consequences following occurrence of significant safety events with respect to interruption of dose escalation. 7. Correction of criteria given for ACR classification of functional capacity. <p>A separate amendment was prepared for Hungary, Romania, Poland and the Slovak Republic (Amendment 2, dated 15 January 2013) implementing the same changes as listed in Amendment 3.</p>
26 August 2013	<p>Amendment 4, dated 26 Aug 2013, applied to the Czech Republic only. It was prepared to define the dose of the study drug XmAb5871 for the expansion cohort (Cohort 5) as recommended by the DESC.</p> <p>During the DESC meeting on 16 August 2013 the safety data of Cohort 4 through at least Day 15 were discussed and all available cumulative safety data from the previous cohorts were reviewed to assess the presence of any cumulative toxicity. The maximum dose of 10.0 mg/kg was considered safe and well tolerated to be used in the expansion cohort. The updated safety information for XmAb5871 was implemented in the protocol. The number of countries was updated as the clinical study was withdrawn in Romania.</p>
23 October 2013	<p>Amendment 5 dated 23 October 2013 was prepared in order to modify the Inclusion Criterion No 6/b. The required hsCRP value was reduced from greater than or equal to 10.0 mg/L to 6 mg/L, in order allow inclusion of a greater proportion of rheumatoid arthritis patients with active disease on stable non-biologic DMARD therapy in Part B of this clinical study.</p> <p>Separate amendments were prepared for the Czech Republic (Amendment 5 dated 23 October 2013) and for Hungary, Poland and the Slovak Republic (Amendment 6 dated 23 October 2013) implementing the same changes.</p>
23 October 2013	<p>Amendment 6 dated 23 October 2013 was prepared in order to modify the Inclusion Criterion No 6/b. The required hsCRP value was reduced from greater than or equal to 10.0 mg/L to 6 mg/L, in order allow inclusion of a greater proportion of rheumatoid arthritis patients with active disease on stable non-biologic DMARD therapy in Part B of this clinical study.</p> <p>Separate amendments were prepared for the Czech Republic (Amendment 5 dated 23 October 2013) and for Hungary, Poland and the Slovak Republic (Amendment 6 dated 23 October 2013) implementing the same changes.</p>
