General information about the trial

Main objective of the trial:

Main objective is to assess the proportionality of 3 pirlindole doses (50, 100 and 150 mg) administered orally in healthy volunteers.

Protection of trial subjects:

The study was conducted following the international recommendations for clinical research gathered in the declaration of Helsinki and its updating (revised in Tokyo 1975, Venice 1983, Hong Kong 1989, Sommerset West 1996, Edinburgh 2000, Washington 2002 and Seoul, South Korea 2008) and following the ICH Harmonized tripartite Guidelines for Good Clinical Practice (CPMP/ICH/135/95), guidelines of the Spanish Ministry of Health (Spanish Real Decret 223/2004) as well as the Directive 2001/20/EC (Note for Guidance "Good Clinical Practice for Studies on Medicinal Products in the European Community").

Recruitment

Recruitment details:

Study participants were selected from the panel of volunteers at the Centre d' Investigació de Medicaments CIM-Sant Pau. The beginning of the study ("first subject in") was on 29 April 2013.

Pre-assignment

Screening details:

The screening was performed during the four weeks and the final evaluation was carried out the day after the administration of the medication. During the screening period (four weeks before the randomization) all participants gave their informed consent and underwent a screening check-up to verify that they met the inclusion/exclusion criteria.
