##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 September 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 September 2018
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the study is to assess the safety and tolerability of long-term treatment with BIIB019 (Daclizumab High Yield Process; DAC HYP) monotherapy in subjects with relapsing remitting multiple sclerosis (RRMS) who completed Study 205MS301 (NCT01064401), Study 205MS203 (NCT01051349) or Study 205MS302 (NCT01462318). Secondary objectives of this study in this study population are as follows: To describe MS-related outcomes, including MS relapse, disability progression, MS lesion formation, and subject-reported impact of MS, following long-term treatment with DAC HYP To assess the long-term immunogenicity of DAC HYP administered by prefilled syringe (PFS) To assess the safety, tolerability, and efficacy of switching to DAC HYP in subjects previously on long-term treatment with interferon  $\beta$ -1a (Avonex) in Study 205MS301(NCT01064401).

Protection of trial subjects:

Written informed consent was obtained from each subject prior to evaluations being performed for eligibility. Subjects were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study. Through the informed consent process each subject was made aware of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 February 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 413
Country: Number of subjects enrolled	Russian Federation: 175
Country: Number of subjects enrolled	United States: 114
Country: Number of subjects enrolled	Ukraine: 133
Country: Number of subjects enrolled	Serbia: 86
Country: Number of subjects enrolled	Czech Republic: 132
Country: Number of subjects enrolled	Italy: 57
Country: Number of subjects enrolled	United Kingdom: 61
Country: Number of subjects enrolled	France: 35
Country: Number of subjects enrolled	Germany: 30

Country: Number of subjects enrolled	Hungary: 67
Country: Number of subjects enrolled	Romania: 26
Country: Number of subjects enrolled	Spain: 25
Country: Number of subjects enrolled	Brazil: 19
Country: Number of subjects enrolled	India: 21
Country: Number of subjects enrolled	Argentina: 16
Country: Number of subjects enrolled	Greece: 13
Country: Number of subjects enrolled	Sweden: 16
Country: Number of subjects enrolled	Denmark: 7
Country: Number of subjects enrolled	Moldova, Republic of: 12
Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	Ireland: 7
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Georgia: 3
Country: Number of subjects enrolled	Switzerland: 3
Worldwide total number of subjects	1501
EEA total number of subjects	889

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1501
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects were enrolled in the study at 226 investigative sites in 28 countries (United States, Canada, Western European countries, Australia, Israel, Eastern European countries, Argentina, Brazil, India, and Mexico) from 15 February 2013 to 24 September 2018.

### Pre-assignment

Screening details:

Subjects who completed studies: 205MS301 (NCT01064401), 205MS203 (NCT01051349), 205MS302 (NCT01462318) were eligible to enroll in this long-term extension study.

### Pre-assignment period milestones

Number of subjects started	1501
----------------------------	------

Number of subjects completed	1500
------------------------------	------

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Adverse event, non-fatal: 1
----------------------------	-----------------------------

### Period 1

Period 1 title	Overall Study (overall period)
----------------	--------------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Not applicable
-------------------	----------------

Blinding used	Not blinded
---------------	-------------

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)
------------------	---

Arm description:

Daclizumab High Yield Process (DAC HYP) 150 mg SC injection every 4 weeks for up to 4.6 years in this long-term extension study 303; includes subjects who previously received interferon beta-1a (IFN  $\beta$ -1a) 30  $\mu$ g intramuscular (IM) injection once weekly in study 301 every 4 weeks for up to 144 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	DAC HYP 150 mg SC injection every 4 weeks
--	---

Investigational medicinal product code	Daclizumab High Yield Process
--	-------------------------------

Other name	
------------	--

Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
----------------------	---

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

Daclizumab High Yield Process 150 mg subcutaneous (SC) injection every 4 weeks.

<b>Arm title</b>	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)
------------------	--

Arm description:

DAC HYP 150 mg subcutaneous (SC) injection every 4 weeks for up to 4.6 years in this long-term extension study 205MS303 (303); includes subjects who previously received DAC HYP 150 mg SC injection in Study 205MS301 (301) every 4 weeks for up to 144 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	DAC HYP 150 mg SC injection every 4 weeks
--	---

Investigational medicinal product code	Daclizumab High Yield Process
--	-------------------------------

Other name	
------------	--

Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
----------------------	---

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

Daclizumab High Yield Process 150 mg subcutaneous (SC) injection every 4 weeks.

<b>Arm title</b>	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)
Arm description: DAC HYP 150 mg SC injection every 4 weeks for up to 93.7 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS302 (302) every 4 weeks for up to 24 weeks followed by a 20-week washout period then continued treatment for up to an additional 3 years.	
Arm type	Experimental
Investigational medicinal product name	DAC HYP 150 mg SC injection every 4 weeks
Investigational medicinal product code	Daclizumab High Yield Process
Other name	
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Daclizumab High Yield Process 150 mg subcutaneous (SC) injection every 4 weeks.

<b>Arm title</b>	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
Arm description: DAC HYP 150 mg SC injection every 4 weeks for up to 94. 1 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS203 (203) every 4 weeks for up to 288 weeks.	
Arm type	Experimental
Investigational medicinal product name	DAC HYP 150 mg SC injection every 4 weeks
Investigational medicinal product code	Daclizumab High Yield Process
Other name	
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Daclizumab High Yield Process 150 mg subcutaneous (SC) injection every 4 weeks.

<b>Number of subjects in period 1<sup>[1]</sup></b>	IFN β-1a 30 µg (301)/DAC HYP 150 mg (303)	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)
Started	597	606	70
Completed	48	38	62
Not completed	549	568	8
Adverse event, non-fatal	104	128	4
Death	2	4	-
Reason Not Specified	280	295	-
Investigator decision	21	15	-
Lost to follow-up	9	8	1
Consent withdrawn	130	117	3
Disease progression, defined by protocol	3	1	-

<b>Number of subjects in period 1<sup>[1]</sup></b>	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
Started	227
Completed	154
Not completed	73
Adverse event, non-fatal	21
Death	-
Reason Not Specified	15
Investigator decision	-
Lost to follow-up	2
Consent withdrawn	35
Disease progression, defined by protocol	-

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: One subject who had an adverse event and did not receive study drug is not included.

## Baseline characteristics

### Reporting groups

Reporting group title	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)
-----------------------	---

Reporting group description:

Daclizumab High Yield Process (DAC HYP) 150 mg SC injection every 4 weeks for up to 4.6 years in this long-term extension study 303; includes subjects who previously received interferon beta-1a (IFN  $\beta$ -1a) 30  $\mu$ g intramuscular (IM) injection once weekly in study 301 every 4 weeks for up to 144 weeks.

Reporting group title	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg subcutaneous (SC) injection every 4 weeks for up to 4.6 years in this long-term extension study 205MS303 (303); includes subjects who previously received DAC HYP 150 mg SC injection in Study 205MS301 (301) every 4 weeks for up to 144 weeks.

Reporting group title	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg SC injection every 4 weeks for up to 93.7 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS302 (302) every 4 weeks for up to 24 weeks followed by a 20-week washout period then continued treatment for up to an additional 3 years.

Reporting group title	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg SC injection every 4 weeks for up to 94. 1 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS203 (203) every 4 weeks for up to 288 weeks.

Reporting group values	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)

### Primary: Number of Subjects with Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Number of Subjects with Adverse Events (AEs) and Serious Adverse Events (SAEs) <sup>[1]</sup>
-----------------	---

End point description:

An AE is defined as any untoward medical occurrence in a clinical investigation subject administered a pharmaceutical product; it does not necessarily have to have a causal relationship with this treatment. An AE could therefore be any unfavourable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product. An SAE is any untoward medical occurrence or effect that at any dose results in death, is life-threatening, requires inpatient hospitalisation or prolongation of existing hospitalisation, results in persistent or significant disability / incapacity, is a congenital anomaly / birth defect or is medically important due to other reasons than the above mentioned criteria. Safety Population consisted of all subjects who completed Study 301, 203 or 302 and had at least 1 dose of DAC HYP during Study 303.

End point type	Primary
----------------	---------

End point timeframe:

First dose of study drug in Study 303 to within 180 days of last dose (up to approximately 5.5 years)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses are reported for this endpoint.

<b>End point values</b>	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group

Subjects with AEs	541	560	53	172
Subjects with SAEs	157	190	15	38

## Statistical analyses

No statistical analyses for this end point

### Secondary: Annualized Relapse Rate (ARR) in the 205MS303 Treatment Period

End point title	Annualized Relapse Rate (ARR) in the 205MS303 Treatment Period
-----------------	--

End point description:

Relapses are defined as new or recurrent neurological symptoms not associated with fever or infection, lasting at least 24 hours, and accompanied by new objective neurological findings upon examination by the Study Neurologist. The unadjusted ARR was calculated by tabulating the total number of relapses experienced in the group divided by the number of days up to the end of study, and the ratio then multiplied by 365.25. Relapses that occurred after subjects received alternative multiple sclerosis (MS) medications were excluded from the analyses. ARR was adjusted for relapse rate, IFN beta use, Expanded Disability Status Scale (EDSS) ( $\leq 2.5$  vs  $> 2.5$ ) and age ( $\leq 35$  vs  $> 35$ ) prior to start of study treatment in 205MS301, calculated using the negative binomial model. Intent-to-treat (ITT) Population consisted of all subjects who completed Study 301, 203 or 302 and received at least 1 dose of DAC HYP during Study 303.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 4.6 years in the 303 study

<b>End point values</b>	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
Subject group type	Reporting group	Reporting group	Reporting group	Reporting group
Number of subjects analysed	597	606	70	227
Units: relapses per year

### Secondary: Number of Subjects with Sustained Disability Progression in the 205MS303 Treatment Period

End point title	Number of Subjects with Sustained Disability Progression in the 205MS303 Treatment Period
-----------------	---

End point description:

Sustained disability progression is defined as at least a 1.0-point increase on the Expanded Disability Status Scale (EDSS) from 303 baseline EDSS  $\geq$ 1.0 that is sustained for 24 weeks, or at least a 1.5-point increase on the EDSS from 303 baseline EDSS of 0, that is sustained for 24 weeks. The EDSS measures the disability status of people with multiple sclerosis on a scale that ranges from 0 to 10. The range of main categories include (0) = normal neurologic exam; to (5) = ambulatory without aid or rest for 200 meters; disability severe enough to impair full daily activities; to (10) = death due to MS. Higher scores

indicate more disability. ITT Population consisted of all subjects who completed Study 301, 203 or 302 and had at least 1 dose of DAC HYP during Study 303.

### Secondary: Number of Subjects with Sustained Disability Progression in the 205MS301-303 Combined Study Period

End point title	Number of Subjects with Sustained Disability Progression in the 205MS301-303 Combined Study Period <sup>[4]</sup>
-----------------	---

End point description:

Sustained disability progression is defined as at least a 1.0-point increase on the Expanded Disability Status Scale (EDSS) from 303 baseline EDSS  $\geq$  1.0 that is sustained for 24 weeks, or at least a 1.5-point increase on the EDSS from 303 baseline EDSS of 0, that is sustained for 24 weeks. The EDSS measures the disability status of people with multiple sclerosis on a scale that ranges from 0 to 10. The range of main categories include (0) = normal neurologic exam; to (5) = ambulatory without aid or rest for 200 meters; disability severe enough to impair full daily activities; to (10) = death due to MS. Higher scores indicate more disability. 301-303 ITT Population consisted of all subjects who completed Study 301 and had at least 1 dose of DAC HYP during Study 303.

End point type	Secondary

MSFC is a three-part, standardised, quantitative, assessment instrument consisting of (Timed 25-Foot Walk, Nine-Hole Peg Test (9HPT) and Paced Auditory Serial Addition Test (PASAT-3"). 2 timed 25-foot walk scores are averaged. 4 trials of the Peg Test (2 for each hand) are converted to the reciprocals and averaged. The number correct of the PASAT-3 is used. The composite Z-score is calculated by:  $Z(25\text{-foot walk}) + Z(HPT) + Z(PASAT)/3$ . A positive change from baseline indicates improvement. 301-303 ITT Population consisted of all subjects who completed Study 301 and received at least one dose of DAC HYP in Study 303. 'n' is the number of subjects with data available at the given timepoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline 301, Weeks 12, 24, 36, 48, 60, 72, 84, 96, 108, 120, 132, 144, 156 in the 301 study, Baseline 303, Weeks 12, 24, 48 in the 303 study

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Not all arms in the baseline period are applicable to this endpoint.

### Secondary: Change from Baseline in the Expanded Disability Status Scale (EDSS) Score in the 205MS303 Treatment Period

End point title	Change from Baseline in the Expanded Disability Status Scale (EDSS) Score in the 205MS303 Treatment Period
-----------------	--

End point description:

The EDSS measures the disability status of people with multiple sclerosis as assessed by the Study Neurologist based on 8 functional systems that ranges from 0=normal neurologic exam; to 5=ambulatory without aid or rest for 200 meters; disability severe enough to impair full daily activities; to 10=death due to MS. Higher scores indicate more disability. A negative change from Baseline indicates improvement. ITT Population consisted of all subjects who completed Study 301, 203 or 302 and received at least one dose of DAC HYP in Study 303. 'n' is the number of subjects with data available at the given timepoint. '999999' indicates that no subjects were analysed.

End point type	Secondary

### Secondary: Number of Subjects Who Are Free from Disease Activity in the 205MS303 Treatment Period

End point title	Number of Subjects Who Are Free from Disease Activity in the 205MS303 Treatment Period <sup>[14]</sup>
-----------------	--

End point description:

Subjects without clinical or radiological activity are defined as disease-free. Clinical activity includes assessment of relapses and of disease progression. Radiological activity includes assessments of Gd+ lesions and new or enlarging T2 lesions. 301-303 ITT Population consisted of all subjects who completed Study 301 and received at least 1 dose of DAC HYP during Study 303. No data was collected for subjects from the 203 and 302 studies.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 4.6 years in Study 303

Notes:

[14] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Not all arms in the baseline period are applicable to this endpoint.

## Secondary: Change from Baseline in the Multiple Sclerosis Impact Scale 29 (MSIS 29) Physical and Psychological Scores in the 205MS303 Treatment Period

End point title	Change from Baseline in the Multiple Sclerosis Impact Scale 29 (MSIS 29) Physical and Psychological Scores in the 205MS303 Treatment Period <sup>[15]</sup>
-----------------	---

### End point description:

The 29-item MSIS-29 is a disease specific subject-reported outcome measure that has been developed and validated to examine the physical (coordination and mobility) and psychological (mental) impact of MS from a subject's perspective; it measures 20 physical items and 9 psychological items. The results for each of the physical and psychological scores are transformed to a score of 0 to 100 (worse state of health). A negative change from Baseline indicates improvement. 301-303 ITT Population consisted of all subjects who completed Study 301 and received at least 1 dose of DAC HYP during Study 303. 'n' is the number of subjects with data available at the given timepoint. No data was collected for subjects from the 203 and 302 studies.

-----------------	--

End point description:

The EQ-5D is a self-administered questionnaire consisting of 5 domains pertaining to specific health state profile: mobility, self-care, usual activities, pain/discomfort and anxiety/depression. The subjects recorded their level of current health for each domain where: 1=no problems, 2=some problem and 3=severe problems. The health score is derived from the individual scores for each of the 5 domains transformed to a score of 0=worst health state to 1=perfect health state. A positive change from Baseline indicates improvement. ITT Population consisted of all subjects who completed Study 301, 203 or 302 and received at least one dose of DAC HYP in Study 303. 'n' is the number of subjects with data available at the given timepoint. '999999' indicates that no data was collected.

## Secondary: HRPQ: Number of Subjects where MS or Its Treatments Resulted in Missed Work in the 205MS303 Treatment Period

End point title	HRPQ: Number of Subjects where MS or Its Treatments Resulted in Missed Work in the 205MS303 Treatment Period
-----------------	--

End point description:

The HRPQ was used by the subject to assess the impact of MS or its treatments on employment. The subject recorded whether their MS or its treatments caused them to miss work. Data is reported by part time or full time employment. ITT Population consisted of all subjects who completed Study 301, 203 or

302 and received at least one dose of DAC HYP in Study 303. 'n' is the number of subjects with data available at the given timepoint. '999999' indicates that no data was collected.

## Statistical analyses

No statistical analyses for this end point

### Secondary: Change from Baseline in 3-Second Paced Auditory Serial Addition Test (PASAT 3) Score in the 205MS303 Treatment Period

End point title	Change from Baseline in 3-Second Paced Auditory Serial Addition Test (PASAT 3) Score in the 205MS303 Treatment Period <sup>[20]</sup>
-----------------	---

End point description:

The PASAT 3 assesses auditory information processing speed. A random series of numbers from 1 to 9, inclusive, are presented and the subject is instructed to consecutively add pairs of numbers so that each number is added to the one that immediately preceded it. In the 3- second PASAT, numbers are presented at a rate of 1 every 3 seconds. The total possible score is the number of correct responses from 0 to 60 (best). A positive change from baseline indicates improvement. 301-303 ITT Population consisted of all subjects who completed Study 301 and received at least 1 dose of DAC HYP during Study 303. 'n' is the number of subjects with data available at the given timepoint. No data was collected for subjects from the 203 and 302 studies.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline 303, Weeks 12, 24, 48, 120, 144, 168, 192, 216, 240 in Study 303

Notes:

[20] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Not all arms in the baseline period are applicable to this endpoint.

### Adverse events information

Timeframe for reporting adverse events:

First dose of study drug in study 205MS303 to within 180 days of last dose (up to approximately 5.5 years)

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	16.1

### Reporting groups

Reporting group title	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)
-----------------------	---

Reporting group description:

DAC HYP 150 mg SC injection every 4 weeks for up to 4.6 years in this long-term extension study 303; includes subjects who previously received interferon beta-1a (IFN  $\beta$ -1a) 30  $\mu$ g intramuscular (IM) injection once weekly in study 301 every 4 weeks for up to 144 weeks.

Reporting group title	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg subcutaneous (SC) injection every 4 weeks for up to 4.6 years in this long-term extension study 205MS303 (303); includes subjects who previously received DAC HYP 150 mg SC injection in Study 205MS301 (301) every 4 weeks for up to 144 weeks.

Reporting group title	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg SC injection every 4 weeks for up to 93.7 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS302 (302) every 4 weeks for up to 24 weeks followed by a 20-week washout period then continued treatment for up to an additional 3 years.

Reporting group title	DAC HYP 150 mg (203) /DAC HYP 150 mg (303)
-----------------------	--

Reporting group description:

DAC HYP 150 mg SC injection every 4 weeks for up to 94. 1 weeks in this long-term extension study 303 (subjects started at Week 144 of the study); includes subjects who previously received DAC HYP 150 mg SC injection in study 205MS203 (203) every 4 weeks for up to 288 weeks.

<b>Serious adverse events</b>	IFN $\beta$ -1a 30 $\mu$ g (301)/DAC HYP 150 mg (303)	DAC HYP 150 mg (301) /DAC HYP 150 mg (303)	DAC HYP 150 mg (302) /DAC HYP 150 mg (303)
Total subjects affected by serious adverse events			
subjects affected / exposed	157 / 597 (26.30%)	190 / 606 (31.35%)	15 / 70 (21.43%)
number of deaths (all causes)	2	4	0
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Adenocarcinoma of colon

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
24 September 2018	Study was terminated early because the subject population under study was no longer the same as indicated for use in the majority of countries.	-

Notes:

### Limitations and caveats

None reported
