Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to estimate abatacept steady-state trough serum concentrations (C_{minss}) at Day 113 in children and adolescents with Polyarticular Juvenile Idiopathic Arthritis (pJIA) aged 6 through 17 years.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 August 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Country: Number of subjects enrolled	Spain: 16
Country: Number of subjects enrolled	South Africa: 19
Country: Number of subjects enrolled	United States: 26
Country: Number of subjects enrolled	Argentina: 26
Worldwide total number of subjects	234
EEA total number of subjects	117

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	128
Adolescents (12-17 years)	106
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total 234 participants were enrolled, 220 randomized as 14 participants were screen failures. 219 participants were treated as one participant discontinued prior to being dosed, hence not included in analysis.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	SC Abatacept Ages 6 to 17

Arm description:

Subcutaneous (SC) abatacept administered by prefilled syringe (PFS) once weekly according to the following weight-tiered dosing regimen: 10 to less than (<) 25 kilogram (kg) (50 milligram [mg] in 0.4 milliliter [mL] PFS), 25 to < 50 kg (87.5 mg in 0.7 mL PFS) and 50 kg (125 mg in 1 mL PFS).

Arm type	Experimental
Investigational medicinal product name	Abatacept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Abatacept was administered once weekly according to the following weight-tiered dosing regimen: 10 to < 25 kg (50 mg in 0.4 mL PFS), 25 to < 50 kg (87.5 mg in 0.7 mL PFS) and 50 kg (125 mg in 1 mL PFS).

Arm title	SC Abatacept Ages 2 to 5
------------------	--------------------------

Arm description:

All weight-tiered dosing groups receiving SC abatacept administered by prefilled syringe (PFS) once weekly according to weight-tiered dose regimen as follows: 10 to < 25kg (50 mg in 0.4 mL PFS), 25 to < 50 kg (87.5 mg in 0.7 mL PFS) and 50 kg (125 mg in 1 mL PFS).

Arm type	Experimental
Investigational medicinal product name	Abatacept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Abatacept was administered once weekly according to the following weight-tiered dosing regimen: 10 to < 25 kg (50 mg in 0.4 mL PFS), 25 to < 50 kg (87.5 mg in 0.7 mL PFS) and 50 kg (125 mg in 1 mL PFS).

Number of subjects in period 1 ^[1]	SC Abatacept Ages 6 to 17	SC Abatacept Ages 2 to 5
Started	173	46
Completed	132	39
Not completed	41	7
Withdrawal of Consent	9	-
Poor/Non-Compliance	1	-
Participant requested to discontinue	4	1
Adverse event, non-fatal	7	1
No Longer Met Study Criteria	2	-
Pregnancy	1	-
Lack of efficacy	17	5

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 234 participants were enrolled, of whom 220 were randomized as 14 participants were screen failures. Of these, 219 participants were treated as one participant discontinued prior to being dosed and was not included in analysis.

Primary: Abatacept Trough Concentration (Cmin) in Subjects Ages 6 to 17

End point title	Abatacept Trough Concentration (Cmin) in Subjects Ages 6 to 17 ^{[1][2]}
-----------------	--

End point description:

Trough concentration of abatacept (reported as geometric mean of Cmin) in all pharmacokinetic (PK)-evaluable subjects. Cmin is reported in microgram per milliliter (µg/mL). Desired target therapeutic Cmin should be ≥ 10 µg/mL. Evaluable pharmacokinetic (PK) analysis population at Day 113 included all the subjects whose PK measurements were collected in the 4 to 10 day window after the previous SC dose and prior to Day 113 dose and if 7 consecutive weekly SC abatacept injections of the same dose were administered prior to Day 113. Here 'N' 'number of subjects analyzed' signifies subjects who were evaluable for this time point. As per planned analysis results were reported for this arm only.

End point type	Primary
----------------	---------

End point timeframe:

Day 113

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only summary statistics were planned for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only summary statistics were planned for this endpoint.

End point values	SC Abatacept Ages 6 to 17

End point title	Number of Subjects (ages 6 to 17) with Adverse Events (AEs), Deaths, Serious AEs (SAEs) and AEs Leading to Discontinuation in the Short Term Period ^[4]
-----------------	--

End point description:

An AE is defined as any new untoward medical occurrence or worsening of a preexisting medical condition in a clinical investigation subject administered an investigational (medicinal) product and that does not necessarily have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (such as an abnormal laboratory finding), symptom, or disease temporally associated with the use of investigational product, whether or not considered related to the investigational product. A SAE is any untoward medical occurrence that at any dose which results in death, is life threatening, requires inpatient hospitalization or causes prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect. All treated population included all subjects who received at least one dose of study medication. As per planned analysis results were reported for this arm only.

End point type	Secondary
End point timeframe:	
Day 1 up to 56 days post last dose in short-term period or first dose in long-term period whichever is first	

Notes:

Urinary tract infection		
subjects affected / exposed	10 / 173 (5.78%)	1 / 46 (2.17%)
occurrences (all)	13	1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 February 2013	The main reason of this amendment was to eliminate two questionnaires, the requirement of varicella vaccination prior to the enrollment in the study, the modification of the acceptable methods of contraception, and additional minor changes to the protocol.
14 February 2014	The main reason of this amendment was to amend inclusion and exclusion criteria, revise pregnancy testing requirements, and to make additional minor changes to the protocol.
22 January 2015	The main reason of this amendment was to clarify that the 7 days post dose follow up visit is performed as the early termination/final study completion visit, to update objectives/endpoints to align with the current regulatory view on long-term safety analysis, and to make other minor changes to the protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
