

Clinical trial results:

A 12-week treatment, multi-center, randomized, double-blind, parallel-group, placebo and active controlled study to assess the efficacy, safety, and tolerability of indacaterol maleate / glycopyrronium bromide in COPD patients with moderate to severe airflow limitation.

Summary

EudraCT number	2012-003346-32
Trial protocol	ES PL
Global end of trial date	28 February 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 February 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 February 2014
Global end of trial reached?	Yes
Global end of trial date	28 February 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the superiority of QVA149 27.5/12.5 ug b.i.d. compared to monotherapy components, QAB149 27.5 ug b.i.d and NVA237 12.5 ug b.i.d., in terms of standardized FEV1 AUC0-12 h at week 12. Eligible patients were provided a short acting β 2-agonist (salbutamol or albuterol) for use as a rescue inhaler on an "as needed" basis throughout the study.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 November 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 126
Country: Number of subjects enrolled	Philippines: 26
Country: Number of subjects enrolled	Poland: 28
Country: Number of subjects enrolled	Romania: 101
Country: Number of subjects enrolled	Spain: 96
Country: Number of subjects enrolled	Ukraine: 147
Country: Number of subjects enrolled	United States: 510
Country: Number of subjects enrolled	Vietnam: 8
Worldwide total number of subjects	1042
EEA total number of subjects	225

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	558
From 65 to 84 years	481
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

Participants were randomized to each treatment arm in a 1:1:1:1 ratio.

Pre-assignment

Screening details:

One thousand forty two participants were randomized. (One participant was randomized twice and was counted twice in the randomized set.) In the safety set, participants were analyzed according to the treatment received.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	QVA149
------------------	--------

Arm description:

27.5/12.5 ug twice daily (b.i.d) Single Dose Dry Powder Inhaler (SDDPI)

Primary: Change from baseline in standardized forced expiratory volume in 1 second (FEV1) Area Under the Curve (AUC) (0-12 hours (h))

End point title	Change from baseline in standardized forced expiratory volume in 1 second (FEV1) Area Under the Curve (AUC) (0-12 hours (h))
End point description: Pulmonary function assessments were performed using centralized spirometry according to international standards. Baseline FEV1 was defined as the average of the pre-dose FEV1 measured at -45 minutes (min) and -15 min at day 1. A mixed model for repeated measures (MMRM), used for this analysis, included terms of treatment, baseline FEV1 measurements, smoking status at baseline, baseline inhaled corticosteroid (ICS) use, region, baseline FEV1 * visit interaction, and visit, treatment * visit interaction. Missing values of FEV1 AUC0-12 at Day 1 and Week 12 will not imputed. The trapezoidal rule was used to calculate FEV1 AUC and then normalized to the length of time.	
End point type	Primary

Secondary: Change from baseline in St. George's Respiratory Questionnaire (SGRQ) total score

End point title	Change from baseline in St. George's Respiratory Questionnaire (SGRQ) total score
-----------------	---

End point description:

Participants reported change in health status by using the SGRQ. The SGRQ contains 50 items divided into 2 parts covering 3 aspects of health related to COPD: Part I covers "Symptoms" and is concerned with respiratory symptoms, their frequency and severity; Part II covers "Activity" and is concerned with activities that cause or are limited by breathlessness; Part II is also concerned with "Impacts", which covers a range of aspects concerned with social functioning and psychological disturbances resulting from airways disease. A score was calculated for each of these 3 subscales and a "Total" score was calculated. In each case the lowest possible value is zero and the highest 100. Higher values correspond to greater impairment of health status. Missing week 12 data were imputed with Last Observation Carried Forward (LOCF) method but only if measured at day ≥ 29 . A negative change from baseline indicates improvement.

Pulmonary function assessments were performed using centralized spirometry according to international standards. Baseline FVC was defined as the average of the pre-dose FVC measured at -45 minutes (min) and -15 min at day 1. A mixed model for repeated measures (MMRM), used for this analysis, included terms of treatment, baseline FVC measurements, smoking status at baseline, baseline inhaled corticosteroid (ICS) use, region, baseline FEV1 * visit interaction, and visit, treatment * visit interaction.

Secondary: Change from baseline in standardized FEV1 AUC (0-4 h), FEV1 AUC (4-8h), FEV1 AUC (8-12h) and FEV1 AUC (0-12 h)

End point title	Change from baseline in standardized FEV1 AUC (0-4 h), FEV1 AUC (4-8h), FEV1 AUC (8-12h) and FEV1 AUC (0-12 h)
-----------------	--

End point description:

Pulmonary function assessments were performed using centralized spirometry according to international standards. Baseline FEV1 was defined as the average of the pre-dose FEV1 measured at -45 minutes

(min) and -15 min at day 1. A mixed model for repeated measures (MMRM), used for this analysis, included terms of treatment, baseline FEV1 measurements, smoking status at baseline, baseline inhaled corticosteroid (ICS) use, region, baseline FEV1 * visit interaction, and visit, treatment * visit interaction. The trapezoidal rule was used to calculate FEV1 AUC and then normalized to the length of time.

Secondary: Transitional Dyspnea Index (TDI) focal score

End point title	Transitional Dyspnea Index (TDI) focal score
End point description:	
<p>The Baseline Dyspnea Index (BDI) / TDI is an instrument used to assess a participant's level of dyspnea. The BDI and TDI each have three domains: functional impairment, magnitude of task and magnitude of effort. BDI domains were rated from 0 (severe) to 4 (unimpaired) and rates summed for baseline focal score ranged from 0 to 12; lower scores mean worse severity. TDI domains were rated from -3 (major deterioration) to 3 (major improvement) and rates summed for transition focal score ranged from -9 to 9; negative scores indicate deterioration. A TDI focal score of ≥1 was defined as a clinically important improvement from baseline.</p>

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 May 2013	Amendment 1: The purpose of the amendment was to ensure that there was no overlap of patients between this trial and the replicate trial, QVA149A2337, which would protect the integrity of both trials. An exclusion criterion was added to the current trial, which excluded patients who previously enrolled in QVA149A2337. Changes were made to the analyses used to evaluate the primary endpoint as follows: 1) a 2-way interaction between baseline and visit in the model was added in order to account for the difference in correlation between the outcome and baseline at each visit; and 2) the sensitivity analysis based only on the completers at week 12 was removed as the underlying assumption of data being missing completely at random was too restrictive. In addition, patients with moderate renal impairment were allowed to participate in the trial, ensuring that the protocol population was not too restrictive.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
