

## Clinical trial results:

**Treatment of rotator cuff syndrome and bursitis: A double blind, controlled trial to assess the efficacy and safety of Traumeel® S injection versus corticosteroid injections and versus placebo TRARO (Traumeel® S in Rotator Cuff Syndrome)-Study**

### Summary

EudraCT number	2012-003393-12
Trial protocol	DE BE ES
Global end of trial date	24 June 2014

### Results information

Result version number	v1 (current)
This version publication date	15 June 2016
First version publication date	15 June 2016

### Trial information

#### Trial identification

Sponsor protocol code	TRARO
-----------------------	-------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01702233
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	24 June 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 June 2014
Global end of trial reached?	Yes
Global end of trial date	24 June 2014
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

Evaluation of subjective parameters in patients with rotator cuff syndrome and bursitis by visual analogue scale (VAS).

Protection of trial subjects:

Standard protection of trial subjects according to ICH GCP requirements was applied.

Background therapy:

Paracetamol (500 mg PRN) was permitted during the study as rescue medication for pain relief with a maximal daily dose of 2000 mg. No Paracetamol intake was allowed within 24 hours before any efficacy measures.

Evidence for comparator:

Periarticular injection of dexamethasone is the established medication for treatment of shoulder conditions such as rotator cuff syndrome and Bursitis.

Actual start date of recruitment	16 April 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	Spain: 38
Country: Number of subjects enrolled	Germany: 129
Country: Number of subjects enrolled	Belgium: 9
Worldwide total number of subjects	176
EEA total number of subjects	176

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	172
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment was carried out in 10 sites in Europe: 2 sites in Belgium, 4 in Germany and 4 in Spain. The recruitment phase was completed when patients were enrolled, and the planned duration of recruitment period was about 12 months. Enrolment started in April 2013; the last Patient was enrolled in February 2014 to the study. LPLV was on 24 June 2014

### Pre-assignment

Screening details:

Observations/procedures performed and checked included check of inclusion/exclusion criteria, completion of physical examination and medical history, bilateral shoulder examination, VAS measurement, bilateral examination of ROM, Jobe/Painful Arc tests and DASH score, dispensation of 500 mg paracetamol as rescue medication for pain relief etc.

### Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Blinding implementation details:

Patients were randomly allocated to Traumeel® S, dexamethasone, or placebo in a 2:2:1 randomization. The randomization was stratified by site. The patients were randomized in ascending order of the site-specific randomization list.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Traumeel Safety Group

Arm description:

72 subjects received 2ml Traumeel once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Arm type	Experimental
Investigational medicinal product name	Traumeel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Periarticular use

Dosage and administration details:

One ampoule of 2 ml Traumeel contains:

Calendula officinalis, 2 mg, (Dil. D2)  
Atropa Belladonna, 2 mg, (Dil. D2)  
Aconitum napellus, 1.2 mg, (Dil. D2)  
Bellis perennis, 1mg, (Dil. D2)  
Hypericum perforatum, 0.6 mg, (Dil. D2)  
Echinacea, 0.5 mg, (Dil. D2)  
Echinacea purpurea, 0.5 mg, (Dil. D2)  
Symphytum officinale 2 mg (Dil. D6)  
Matricaria recutita, 2 mg, (Dil. D3)  
Achillea millefolium, 2 mg, (Dil. D3)  
Mercurius solubilis Hahnemanni, 1 mg, (Dil. D6)  
Hepar sulfuris, 2 mg, (Dil. D6)  
Hamamelis virginiana 0.2 mg, (Dil. D1)  
Arnica montana, 2 mg, (Dil. D2)

Route of administration: periarticular use

Total administered: 6 ml (2 ml/week for 3 weeks)

<b>Arm title</b>	Fortecortin Safety Group
Arm description:	
67 participants were randomized to Fortecortin. The subjects received 2ml Fortecortin once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.	
Arm type	Active comparator
Investigational medicinal product name	Fortecortin (dexamethasone)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Periarticular use

**Dosage and administration details:**

One vial of 2 ml Fortecortin contains 8 mg dexamethasone.

Route of administration: periarticular use

Total administered: 6 ml (2 ml/week for 3 weeks), i.e. 48 mg dexamethasone

<b>Arm title</b>	Placebo Safety Group
Arm description:	
36 participants were randomized to placebo. The subjects received 2ml placebo once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Periarticular use

**Dosage and administration details:**

One ampoule of 2 ml placebo containing sodium chloride and water for injections, was administered once per week for 3 weeks.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Traumeel Safety Group	Fortecortin Safety Group	Placebo Safety Group
Started	72	67	36
Completed	67	64	31
Not completed	5	3	5
Consent withdrawn by subject	1	-	-
Physician decision	2	-	-
Adverse event, non-fatal	-	2	2
private problems, broken ampoules	-	-	2
Lack of efficacy	2	1	1

**Notes:**

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 176 subjects were randomized, 1 subject (Traumeel S group) was not treated. Thus, 175 of the randomized patients were included in the Safety Set, 72 patients in the Traumeel S group, 67 patients in the Fortecortin group and 36 patients in the Placebo group. The Safety Analysis Set was used

for all analyses of safety, tolerability, and background characteristics.

## Baseline characteristics

### Reporting groups

Reporting group title	Traumeel Safety Group
-----------------------	-----------------------

Reporting group description:

72 subjects received 2ml Traumeel once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Reporting group title	Fortecortin Safety Group
-----------------------	--------------------------

Reporting group description:

67 participants were randomized to Fortecortin. The subjects received 2ml Fortecortin once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Reporting group title	Placebo Safety Group
-----------------------	----------------------

Reporting group description:

36 participants were randomized to placebo. The subjects received 2ml placebo once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

## End points

### End points reporting groups

Reporting group title	Traumeel Safety Group
-----------------------	-----------------------

Reporting group description:

72 subjects received 2ml Traumeel once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Reporting group title	Fortecortin Safety Group
-----------------------	--------------------------

Reporting group description:

67 participants were randomized to Fortecortin. The subjects received 2ml Fortecortin once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Reporting group title	Placebo Safety Group
-----------------------	----------------------

Reporting group description:

36 participants were randomized to placebo. The subjects received 2ml placebo once a week for 3 continuous weeks, using ultrasound-guided subacromial periarticular injection. Randomized patients who received at least one injection of study medication form the Safety Analysis Set. The Safety Analysis Set was used for all analyses of safety, tolerability, and Background characteristics.

Subject analysis set title	Traumeel S Per-Protocol Set
----------------------------	-----------------------------

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Patients in the Full Analysis Set (subset of the Safety Analysis Set) without major protocol deviations formed the Per-Protocol Set. The PP Set was used as the primary population for the analysis of efficacy.

Subject analysis set title	Fortecortin Per-Protocol Set
----------------------------	------------------------------

Subject analysis set type	Sub-group analysis

## Statistical analyses

Statistical analysis title	Analysis of primary endpoint
Statistical analysis description:	
A one-sided test of non-inferiority of Traumeel® S with respect to dexamethasone at Level 0.025 was computed using an analysis of covariance (ANCOVA) model with treatment group and centre as qualitative factors and the baseline value of the abduction rotation pain VAS for active external rotation as a covariate.	
Comparison groups	Fortecortin Per-Protocol Set v Traumeel S Per-Protocol Set
Number of subjects included in analysis	116
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
Method	ANCOVA
Parameter estimate	least squares mean difference
Point estimate	7.62
Confidence interval	
level	Other: 97.5 %
sides	1-sided
upper limit	15.74
Variability estimate	Standard deviation
Dispersion value	4.11

Notes:

[1] - The test decision was based on a one-sided 97.5% confidence interval for the corresponding Treatment difference. The non-inferiority margin was set to 13 mm on a 0 - 100 mm VAS scale.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Screening (max. -7 days), Baseline, Day 1, Day 8 ± 1 day, Day 15 ± 1 day, Day 22 ± 1 day, Week 9 ± 3 days, Week 15 ± 3 days

Adverse event reporting additional description:

All AEs, occurred after the patient signed the IC were collected and reported on eCRF, regardless of whether they were reported by the patient, elicited by investigator questioning, detected through physical examination, or by other means. 86/175 treated patients (49%) reported 197 (s)AEs. 78 patients reported 171 TEAEs after 1st IMP Administration

Assessment type	Systematic
-----------------	------------

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 February 2014	<p>1. The number of patients to be enrolled was to be increased to 175 (instead of 160) patients to achieve a sufficient number of evaluable patients:</p> <p>Patients were not eligible for the per protocol analysis for the following reasons:</p> <p>a. methodology issues with performing the VAS as per protocol. A total of 11 patients was inadvertently instructed to perform the VAS scoring differently from protocol, one patient performed the VAS scoring on one form for all visits and the visit could not be referenced thereafter and in one patient the VAS was not performed adequately at baseline.</p> <p>b. There were some drop-outs for the following reasons: Patients do not meet inclusion criteria (calcifications), in one case the patient was employed at site and in one case the random code was found open.</p>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
