

Clinical trial results:

Prospective phase IIA multicenter double-blinded randomized placebo-controlled clinical trial evaluating the efficacy and safety of inhaled, aerosolized Tobramycin (TOBI®) b.i.d. in patients with ventilator-associated pneumonia (VAP)

Summary

EudraCT number	2012-003621-21
Trial protocol	DE
Global end of trial date	30 July 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 July 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 May 2019
Global end of trial reached?	Yes
Global end of trial date	30 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is the reduction and eradication of the endobronchial gram-negative bacteria in the pulmonary system, assessed as eradication of the pathogen at day 6 measured by the decrease in gram-negative pathogen-load in pulmonary infiltrate (either by gram-staining of the pathogen, by measurement of copies of DNA per ml in end-point PCR analysis or by kinetic laser measurement of turbidity increase of particles).

Protection of trial subjects:

The safety of the therapy with TOBI or aerosolized sodium chlorid solution was assessed each day of the study by physical examination, vital signs, laboratory test and evaluation of adverse events. Furthermore, the patients were monitored for spontaneous complaints after treatments.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 27
Worldwide total number of subjects	27
EEA total number of subjects	27

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	9
From 65 to 84 years	18

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 5 study centers at 3 Campi of Charité in Berlin, between 10 February 2014 and 14 May 2019. Each patient fulfilling inclusion criteria (with VAP, between 18-85 ages, treated < 48 h with standard therapy before diagnosis VAP, gram-negativity diagnose within 24 h...) after given written consent by him/legal representative.

Pre-assignment

Screening details:

The originally planned sample size was 90 subjects (45 per treatment group; estimated drop-out rate 10%). After the approved amendment a total of 28 patients suffering from VAP were enrolled. 27 subjects were randomized. Consent withdraw by subject: 1 in the control group.

Period 1

Period 1 title	overall period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Standard therapy +TOBI

Arm description:

Subjects received a systemic antibiotic standard care therapy (i.e. intravenous penicillin, cephalosporine, carbapenem, chinolone or aminoglycosides) and 300 mg (5ml) inhalative of tobramycin twice daily for 5 days on day 0,1,2,3 and 4 (visit 1-5). The inhalation did not take longer 15 minutes. There were 3 follow-up dates (visit 6-8) . The final investigation was at day of discharge of the patient from ICU (visit 9, at maximum 90 day from enrollment)

Arm type	Experimental
Investigational medicinal product name	Tobramycin
Investigational medicinal product code	32986-56-4
Other name	TOBI
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Subjects received 300 mg (5ml) tobramycin twice daily for 5 days at Visit (1-5). The inhalation did not take longer than 15 minutes.

Arm title	Standard therapy + Placebo
------------------	----------------------------

Arm description:

Subjects received a systemic antibiotic standard care therapy (i.e. intravenous penicillin, cephalosporine, carbapenem, chinolone or aminoglycosides) and 5ml of aerosolized 0,9 % sodium chlorid solution twice daily for 5 days on day 0,1,2,3 and 4 (visit 1-5). The inhalation did not take longer 15 minutes.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nebuliser solution
Routes of administration	Inhalation use

Dosage and administration details:

Subjects received placebo matched to tobramycin, twice daily for 5 days (Visit 1-5). The inhalation did not take longer than 15 minutes.

Number of subjects in period 1	Standard therapy +TOBI	Standard therapy + Placebo
Started	14	13
Completed	14	12
Not completed	0	1
Adverse event, serious fatal	-	1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2014	Reduction of planned subjects ends based on new findings of the effectiveness of tobramycin, new study protocol V1.2
22 November 2016	Extension of study duration to 3 years and 9 months
24 April 2019	Extension of study duration to 6 years and 4 months

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
