

Clinical trial results:

A Randomized, Double-blind, Placebo-controlled, Parallel-group, Dose-ranging Study Investigating the Efficacy, Safety, Pharmacokinetic and Biomarker Profiles of Dupilumab (REGN668, SAR231893) Administered to Adult Patients with Moderate-to-Severe Atopic Dermatitis

Summary

EudraCT number	2012-003651-11
Trial protocol	HU CZ DE PL
Global end of trial date	10 September 2014

Results information

Result version number	v1
This version publication date	07 August 2016
First version publication date	07 August 2016

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 October 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	10 September 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of multiple dupilumab dose-regimens, compared to placebo, in adult patients with moderate-to-severe AD.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy:

Topical corticosteroids

Evidence for comparator: -

Actual start date of recruitment	15 May 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 35
Country: Number of subjects enrolled	Czech Republic: 18
Country: Number of subjects enrolled	Germany: 83
Country: Number of subjects enrolled	Hungary: 20
Country: Number of subjects enrolled	United States: 112
Country: Number of subjects enrolled	Canada: 54
Country: Number of subjects enrolled	Japan: 58
Worldwide total number of subjects	380
EEA total number of subjects	156

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	372
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 95 study sites in 7 countries. A total of 452 subjects were screened between 15 May 2013 and 10 January 2014. 380 subjects were randomized and 379 were treated. 72 subjects were screen failures mainly due to exclusion and inclusion criteria not met.

Pre-assignment

Screening details:

Randomization was stratified by disease severity (moderate Investigator's global assessment [IGA] = 3 versus severe IGA = 4 atopic dermatitis and region (Japan versus rest of world). Assignment to arms was done centrally in 1:1:1:1:1:1 ratio for Dupilumab (300 mg qw; 300 mg q2w; 200 mg q2w; 300 mg q4w & 100 mg q4w) and Placebo.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Dupilumab 300 mg qw

Arm description:

Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single 300 mg injection every week (qw) from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668, SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (300 mg/2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Arm title	Dupilumab 300 mg q2w
------------------	----------------------

Arm description:

Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single injection of Placebo (for Dupilumab) alternating with single 300 mg injection of Dupilumab every 2 weeks (q2w) from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668, SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (300 mg/2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

Subcutaneous injection (2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Arm title	Dupilumab 200 mg q2w
------------------	----------------------

Arm description:

Two subcutaneous injections of Dupilumab 200 mg (for a total of 400 mg) as a loading dose on Day 1, followed by a single injection of Placebo (for Dupilumab) alternating with single 200 mg injection of Dupilumab q2w from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668, SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (200 mg/2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Arm title	Dupilumab 300 mg q4w
------------------	----------------------

Arm description:

Two subcutaneous injections of Dupilumab 300 mg (for a total of 600 mg) as a loading dose on Day 1, followed by a single 300 mg injection of Dupilumab every 4 weeks (q4w) and Placebo (for Dupilumab) qw when Dupilumab not administered from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668, SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (300 mg/2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Arm title	Dupilumab 100 mg q4w
------------------	----------------------

Arm description:

Two subcutaneous injections of Dupilumab 200 mg (for a total of 400 mg) as a loading dose on Day 1, followed by a single 100 mg injection of Dupilumab q4w and Placebo (for Dupilumab) qw when

Dupilumab not administered from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Dupilumab
Investigational medicinal product code	REGN668, SAR231893
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (100 mg/2 ml & 200 mg/2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Arm title	Placebo
------------------	---------

Arm description:

Two subcutaneous injections of Placebo (for Dupilumab) as a loading dose on Day 1 followed by a single injection qw from Week 1 to Week 15.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection (2 ml) in the different quadrants of the abdomen (avoiding navel and waist areas) and upper thighs.

Primary: Percent Change in Eczema Area and Severity Index Score (EASI) From Baseline to Week 16

End point title	Percent Change in Eczema Area and Severity Index Score (EASI) From Baseline to Week 16
End point description: The EASI score was used to measure the severity and extent of atopic dermatitis (AD) and measures erythema, infiltration, excoriation and lichenification on 4 anatomic regions of the body: head, trunk, upper and lower extremities. The total EASI score ranges from 0 to 72 points, with the higher scores reflecting the worse severity of AD. Analysis was performed on full analysis set (FAS) included all randomized subjects who received at least 1 dose of study drug. Here, number of subjects analyzed = subjects with EASI score assessment at specified time-points. Efficacy data was set to missing after use of rescue medication. Missing values imputed by last observation carried forward (LOCF). Here 'n' signifies number of subjects with available data for each specified category: (Score at) Baseline; (Score at) Week 16; (Percent) Change at Week 16

Statistical analyses

Statistical analysis title	Dupilumab 300 mg qw vs Placebo
Statistical analysis description:	
LS mean and standrad error were obtained using analysis of covariance(ANCOVA) model with treatment and randomization strata(moderate vs severe;Japan vs rest of world) and relevant baseline values as covariates. Multiplicity was controlled using hierarchical testing procedure: highest dose vs. placebo was tested first.Comparison order was 300 mg qw, 300 mg q2w, 200 mg q2w, 300 mg q4w & 100 mg q4w, vs placebo respectively.Testing continues only if previous comparison was statistically significant.	
Comparison groups	Dupilumab 300 mg qw v Placebo

End point title	Percent Change in Peak Weekly Averaged Pruritus Numerical Rating Scores (NRS) From Baseline to Week 16
-----------------	--

End point description:

Pruritus NRS is an assessment tool that is used to report the intensity of subject's pruritus (itch), both maximum and average intensity, during a 24-hour recall period. Subjects were asked the following question: how would a subject rate his itch at the worst moment during the previous 24 hours (for maximum itch intensity on a scale of 0 – 10 [0 = no itch; 10 = worst itch imaginable]). Analysis was performed on FAS. Here, number of subjects analyzed = subjects with pruritus NRS assessment at specified time-points. Efficacy data was set to missing after use of rescue medication. More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 April 2013	It included the following changes: -The enrollment period for subjects at clinical sites in Japan was changed; - Exclusion criteria was clarified to define the potential subject population; - The prohibited medications and procedures section was reorganized and the text was clarified; - The timing of the primary analysis was changed.
27 June 2013	- The length of screening period was increased to 28 days; - Added a section for study committees; - Modified the time points for some of the assessments: photographs, periostin, and serum pregnancy test; - Specified that photographs were taken only at selected sites; - The inclusion/exclusion criteria was clarified to further define the subject population; - Permitted/prohibited medications text was modified to improve clarity regarding the use of prescription moisturizers or moisturizers containing additives; - Expanded description of skin barrier function tests; - Reporting period for any pregnancy was redefined occurring in a female subject of female partner of a male subject during the study; - PK variables were modified; - Modifications to statistical plan.
03 December 2013	- Added a provision for an interim analysis; - Added description and criteria for subjects to undergo reduced follow-up duration and transition into an open-label extension study; - The definition of FAS was revised.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
