

Clinical trial results:

A Phase IV multicenter, open label study of postmenopausal women with estrogen receptor-positive locally advanced or metastatic breast cancer treated with everolimus (RAD001) in combination with exemestane, with exploratory epigenetic marker analysis (4EVERUK)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 August 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 August 2016
Global end of trial reached?	Yes
Global end of trial date	15 August 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to determine the Overall Response Rate (ORR) at 48 weeks to everolimus (10 mg daily p.o.) and exemestane (25 mg daily p.o.) treatment in postmenopausal women with ER+ BC who have previously experienced recurrence or progression on NSAI therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 49
Worldwide total number of subjects	49
EEA total number of subjects	49

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	33
From 65 to 84 years	16
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Sixty-seven patients were screened and 52 patients were enrolled. Forty-nine patients had ≥ 1 dose study drug and were considered as Started

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Everolimus and Exemestane
------------------	---------------------------

Arm description:

Postmenopausal women diagnosed with oestrogen receptor positive locally advanced or metastatic breast cancer will receive everolimus at a dose of 10mg daily p.o. and exemestane 25mg daily p.o.

Arm type	Experimental
Investigational medicinal product name	Everolimus
Investigational medicinal product code	RAD001
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

5 mg tablets supplied and dosage was 10 mg (2 × 5 mg) p.o. per day

Investigational medicinal product name	Exemestane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

25 mg tablets purchased locally and dosage was 1 tablet 25 mg p.o. per day

Number of subjects in period 1	Everolimus and Exemestane
Started	49
Completed	9
Not completed	40
Consent withdrawn by subject	2
Disease progression	26
Adverse event, non-fatal	8
Death	3
Protocol deviation	1

Primary: Best overall response of everolimus and exemestane treatment in postmenopausal women with hormone receptor positive locally advanced or metastatic breast cancer

End point title	Best overall response of everolimus and exemestane treatment in postmenopausal women with hormone receptor positive locally advanced or metastatic breast cancer ^[1]
-----------------	---

End point description:

The best Overall Response (OR) for each patient is determined from the sequence of investigator overall lesion responses according to Response Evaluation Criteria in Solid Tumors (RECIST 1.1.). To be assigned a best OR of Complete Response (CR) at least two determinations of CR at least 4 weeks apart before progression are required. To be assigned a best OR of Partial Response (PR) at least two determinations of PR or better at least 4 weeks apart before progression (and not qualifying for a CR) are required. The Overall Response Rate (ORR) was defined as the proportion of patients with a best OR of confirmed CR or PR by week 48.

End point type	Primary
----------------	---------

End point timeframe:

At 48 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical hypothesis testing was done for primary endpoint

Secondary: Quality of life (EORTC Quality of Life Questionnaire of cancer patients QLQ-C30)

End point title	Quality of life (EORTC Quality of Life Questionnaire of cancer patients QLQ-C30)
-----------------	--

End point description:

The QLQ-C30 is composed of multi-item scales and single-item measures including 5 functional scales, 3 symptom scales, a global health status-QoL scale, and 6 single items. Each of the multi-item scales includes a different set of items - no item occurs in more than 1 scale. High scale score=higher response level; a high score for a functional scale=a healthy level of function, high score for the global health status/QoL=high quality of life but a high score for a symptom scale / item=high level of symptomatology/problems. The principle for scoring these scales: 1.) Estimate the average of the items that contribute to the scale = raw score. 2.) Linear transformation to standardize the raw score, so that scores range from 0 to 100. Results should be interpreted with caution as the numbers of patients with available data over time were limited, and because of high variances as evidenced by large standard deviations

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse events are reported in this record from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2013	Post-trial treatment was to be captured for all patients when they completed the trial, whether they withdrew early or completed the full treatment duration. All new anticancer therapies given after the last dose of the study drug were to be recorded on CRF pages designed to capture antineoplastic therapies. An interim analysis was included on all patients who commenced treatment in the study by 04-Sep-2013. This first interim analysis included all screening and baseline data. A second interim analysis was planned to be performed after all patients completed 24 weeks of treatment (or prematurely discontinued on or before this time). End of study was extended from Week 48 until patients progressed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
