

Clinical trial results:

A Phase 2, Double-Blind, Parallel, Placebo-Controlled, Randomized Study to Evaluate Multiple Dose Levels of IPI- 145 with Background Methotrexate in Subjects with Active Rheumatoid Arthritis and an Inadequate Response to Methotrexate Alone

Summary

EudraCT number	2012-003724-20
Trial protocol	HU DE BG RO
Global end of trial date	23 December 2014

Results information

Result version number	v1
This version publication date	25 May 2016
First version publication date	25 May 2016

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 September 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 September 2014
Global end of trial reached?	Yes
Global end of trial date	23 December 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Evaluate the efficacy of multiple dose levels of IPI 145 compared to placebo in subjects with moderate-to-severe active rheumatoid arthritis (RA) taking a stable dose of methotrexate (MTX)

Protection of trial subjects:

The final study protocol and its amendments, including the final version of the informed consent form (ICF), were approved or given a favorable opinion in writing by an Independent Ethics Committee (IEC) at each clinical trial site. The Principal Investigator had to provide evidence of IEC approval to Infinity before he or she could enroll any subject into the study. The Principal Investigator was responsible for informing the IRB/IEC of any amendment to the protocol. In addition, the IRB/IEC approved all advertising used to recruit subjects for the study. The protocol was re-approved by the IRB/IEC annually. Progress reports and notifications of serious adverse events (SAEs) were provided to the IRB/IEC according to regulations and guidelines.

Background therapy:

Methotrexate (MTX): Study subjects must have taken MTX for at least 3 months prior to Screening, with a stable dose and route (between 7.5 and 25.0 mg once per week) from at least 6 weeks prior to dosing (Day 1) to be eligible for inclusion.

Once on study, subjects must remain on a stable dose and route of MTX (between 7.5 and 25.0 mg once per week) from Screening through the last study visit (final Follow-up Visit).

If the weekly MTX dose is less than 15 mg, then subjects must have a documented history of intolerance or toxicity at doses ≥ 15 mg per week.

Evidence for comparator: -

Actual start date of recruitment	30 April 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Romania: 1
Country: Number of subjects enrolled	Bulgaria: 17
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Hungary: 22
Country: Number of subjects enrolled	Mexico: 74
Country: Number of subjects enrolled	New Zealand: 7
Country: Number of subjects enrolled	Russian Federation: 39
Country: Number of subjects enrolled	Serbia: 15
Country: Number of subjects enrolled	Ukraine: 57
Country: Number of subjects enrolled	Colombia: 16
Country: Number of subjects enrolled	Poland: 71

Worldwide total number of subjects	322
EEA total number of subjects	114

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	319
From 65 to 84 years	3
85 years and over	0

Arm title	Cohort 4: placebo BID
Arm description: -	
Arm type	Placebo
Investigational medicinal product name	placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

IPI-145 placebo will be supplied in capsule form and consists of capsules filled with silicified microcrystalline cellulose. The IPI-145 placebo capsules are supplied as size 2, white opaque hard gelatin capsules to match the 0.5 and 1 mg IPI-145 drug product capsules and as size 2 orange opaque hard gelatin capsules to match the 5 mg IPI-145 drug product capsule.
