## General information about the trial

Main objective of the trial:

To establish the MTD and recommended dose of two intermittent dosing schedules of AZD2014: 3 days on/4days off and 2 days on 5 days off in combination with weekly paclitaxel in patients with solid tumours. To assess the safety and toxicity profile of the combination of AZD2014 and weekly paclitaxel.

Protection of trial subjects:

As this is a phase I trial, there are stopping rules for toxicity during this study (parts A and B): Regular weekly to 2-weekly safety reviews will be conducted between the Principal Investigator or delegate from each investigational site and DDU Clinical Trials Manager or delegate. Decisions will be based on all relevant data available from all dose levels evaluated in the ongoing study including safety information, DLTs, all CTCAE Grade  $\geq 2$  toxicity data, available PK, and PD data from evaluable patients. If at any time, 2 or more DLTs have occurred in a specific dose level, one of the following actions will be implemented:

- Proceed with dose escalation
- Expand the cohort to a maximum of 6 evaluable patients
- De-escalate the dose
- Define the MTD (where 6 evaluable patients are assessed)
- Stop the study

Formal review of toxicity and inpatient dose escalation data will be undertaken by the SRC when 3 patients have completed approximately 9 weeks of treatment on either schedule, and at the end of the dose escalation phase, for selection of the dose expansion schedule. During dose expansion, SRC meetings will be held regularly for safety review (e.g. every 5-10 patients). Additional SRC meetings will be organised in the event of safety concerns, e.g. with the inpatient dose escalation strategy, for consideration of reverting to a classic 3+3 phase I dose escalation scheme.

The SRC will consist of:

- Chief Investigator or delegate
- Principal Investigator or delegate from each investigational site
- DDU Pharmacovigilance Officer or delegate
- DDU Clinical Trials Manager or delegate
- Senior ECMC clinician (who is not CI)

Representatives of AstraZeneca and Cancer Research UK's Drug Development Office will also be invited to attend the SRC meetings as non-voting participants. Further internal or external experts may be consulted by the SRC as necessary.

## Subject disposition

### Recruitment

Recruitment details:

Adult patients with solid tumours will be enrolled into the dose escalation phase of the study. Patients with ovarian cancer and patients with squamous lung cancer will be enrolled in the expansion phase.

### Pre-assignment

Screening details:

The patient must fulfil the eligibility criteria.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was required when assessing the number of DLTs. The Safety Review Committee made the decision to escalate the dose of AZD2014 maximum tolerated dose), thereby assessing the safest schedule to take forward into expansion.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Patient disposition arms presented as:

Escalation: 3d on, 4d off (Sch. A)

Escalation: 2d on, 5d off (Sch. B)

Expansion: 3d on, 4d off (Sch. A)

AE's and SAE's the arms are split further into each schedule dosing groups and the expansion in the tumour types (Lung 25mg & 50mg and Ovarian 50mg):

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was required for this endpoint as the n number per each AE is not significant.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
