

Relapse rate

Group	Total no. of patients	No. of evaluable patients*	Completeness of follow up (C) ¹	No. of relapsed patients	% of evaluable patients who completed 37 months without relapse	90 % Confidence Interval
MMR	53	53	79%	31	28	18 - 38
MR4	121	119	86%	36	66	59 - 74

**Subtracting losses to follow-up & complete withdrawals (prior to experiencing any event) from the trial.*

The table below shows the primary outcome results for the sensitivity analysis performed on the per-protocol set. Two patients (both MMR) are excluded from this analysis due to major deviations.

Results of Sensitivity analyses for relapse rate

Sensitivity Analysis – allowance for	Group	Total no. of patients	No. of evaluable patients	No. of relapsed patients	% of evaluable patients who completed 37 months without relapse	90 % Confidence Interval
Per-protocol analysis	MMR	51	51	29	29	19 - 40
	MR4	121	119	36	66	59 - 74

¹ The completeness index C is the ratio of the total observed person-time of follow-up as a percentage of the potential time of follow-up in a study.

Clark TG, Altman DG, De Stavola BL (2002) "Quantification of the completeness of follow-up" Lancet 359: 1309-1310.
