

## Clinical trial results:

**A dose-ranging, randomized, double-blind, placebo-controlled, parallel-group, multi-center study of the efficacy and safety of 4 doses of imeglimin after 24 weeks of treatment in subjects with type 2 diabetes mellitus**

### Summary

EudraCT number	2012-004045-33
Trial protocol	LV HU EE CZ RO
Global end of trial date	10 July 2014

### Results information

Result version number	v1 (current)
This version publication date	26 September 2021
First version publication date	26 September 2021

### Trial information

#### Trial identification

Sponsor protocol code	PXL008-008
-----------------------	------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01951235
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 December 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 July 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To assess the dose-response of imeglimin at 4 doses (500 mg, 1000 mg, 1500 mg and 2000 mg bid) compared to placebo in male and female subjects with type 2 diabetes mellitus after 24 weeks of treatment, using glycosylated hemoglobin (HbA1c) as the primary evaluation criterion.

Protection of trial subjects:

Subjects, or their legally acceptable representatives, provided their written consent to participate in the study after having been informed about the nature and purpose of the study, participation/termination conditions, and risks and benefits of treatment. The subject information sheet in the local language and prepared in accordance with the ICH GCP guidance was provided by the sponsor for the purpose of obtaining informed consent. Written informed consent was provided at Screening Visit 1 before any study-specific activity and whenever important new information became available that was relevant to the subject's consent. Subjects were free to discontinue the study at any time without giving their reasons.

To overcome the risk to expose subjects with T2DM to an inappropriate glycemic control, some proactive measures were implemented. First, the upper limit of HbA1c inclusion criterion at randomization was limited to 9.5% in order to avoid highly uncontrolled subjects entering the study (see Section 9.3.1). Second, fasting plasma glucose (FPG) was closely monitored throughout the study by the subject (glucometer) and by the investigator at each visit and whenever necessary. Threshold was defined following the Food and Drug Administration (FDA) guidance to withdraw from the study subjects whose glycemic parameters kept deteriorating during the study period in order to initiate rescue therapy.

Background therapy:

No background therapy was allowed during the study.

Evidence for comparator:

The design of this dose-ranging study included a placebo arm in order to compare the efficacy of each dose of imeglimin based on the change in HbA1c values as well as safety and tolerability.

Actual start date of recruitment	25 January 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 28
Country: Number of subjects enrolled	United States: 45
Country: Number of subjects enrolled	Ukraine: 63
Country: Number of subjects enrolled	Romania: 68
Country: Number of subjects enrolled	Czechia: 15
Country: Number of subjects enrolled	Estonia: 31
Country: Number of subjects enrolled	Hungary: 60
Country: Number of subjects enrolled	Latvia: 72

Worldwide total number of subjects	382
EEA total number of subjects	246

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	283
From 65 to 84 years	99
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects were enrolled at a total of 74 study centers, in the Czech Republic (5 centers), Estonia (6 centers), Hungary (13 centers), Latvia (9 centers), Romania (11 centers), Russia (10 centers), Ukraine (11 centers), and the United States (9 centers).

First subject screened: 25Jan2013 - Last subject screened: 02Dec2013

### Pre-assignment

Screening details:

Subjects were screened within 3 weeks, followed by a 3-week placebo run-in period for treatment-naive subjects, or 6-week placebo wash-out/run-in period for subjects previously treated with an oral antidiabetic monotherapy.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Imeglimin 500 mg twice daily

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Imeglimin

## Statistical analyses

<b>Statistical analysis title</b>	Imeglimin 500 mg bid versus Placebo
Statistical analysis description:	
Change in HbA1c from baseline to Week 24 was analyzed using an analysis of covariance (ANCOVA) method where the change in HbA1c from baseline to Week 24 was the outcome variable and country and treatment group were fixed effects. HbA1c values at baseline and subjects naïve of treatment/previously treated were included as covariates. This parameter was assessed by using the last observation carried forward (LOCF) imputation of missing values for the ITT population.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 June 2013	Firstly, there was a change in the ECG recording schedule for assessment of the exclusion criterion related to the QT/QTc interval from Randomization Visit 5 to Laboratory Visit 4, in order to make the results available for Randomization Visit 5. Additionally, to simplify this criterion, calculation of the QTc interval was changed to use only the Fridericia's formula. Secondly, a change was made to allow some flexibility in the timeframe for ophthalmology examination. As well as these modifications to the timelines for 2 exclusion criteria, it was also clarified that any overcompliance > 100% of planned study drug intake was required to be reported as a potential overdose in an expedited manner.
02 December 2013	This amendment was to notify the authorities that the ratio of subjects naïve of treatment versus subjects previously treated that were planned to be recruited changed from 30-40% naïve versus 60-70% previously treated, to approximately 25% naïve and approximately 75% previously treated.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
