Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 December 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 December 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of MEDI2070 versus placebo to induce a clinical effect (defined as at least a 100-point reduction in Crohn's Disease Activity Index [CDAI] from baseline) or remission at Week 8 in subjects with moderate to severe Crohn's Disease.

Protection of trial subjects:

The conduct of this clinical study met all local and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and was consistent with International Conference on Harmonization guideline: Good Clinical Practice, and applicable regulatory requirements, and any conditions required by a regulatory authority and/or Institutional Review Board/ Independent Ethics Committee that approved this study. Subjects signed an informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 February 2013
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 31
Country: Number of subjects enrolled	Canada: 24
Country: Number of subjects enrolled	Czech Republic: 14
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	France: 9
Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Poland: 6
Worldwide total number of subjects	121
EEA total number of subjects	66

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	121
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 174 subjects were screened between 01Feb2013 and 26Feb2014 across 9 countries (USA, Canada, Czech Republic, France, Germany, Hungary, Italy, Poland, and Spain).

Pre-assignment

Screening details:

Out of 174 screened subjects, 53 were considered screen failures. A total of 121 subjects were randomized, of which 2 did not receive study drugs and 119 were treated in the study.

Period 1

Period 1 title	Double-Blind Induction Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received IV Placebo at Week 0 and Week 4.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo (matching to MEDI2070 700 mg) was administered by intravenous (IV) infusion at Week 0 (Day 1) and Week 4 in double-blind period. Placebo was delivered in 5.0% weight/volume (w/v) dextrose in a volume of 100 mL over a minimum of 60 minutes using an infusion pump.

Arm title	MEDI2070 700mg
------------------	----------------

Arm description:

Subject received IV MEDI2070 700mg at Week 0 and Week 4.

Arm type	Experimental
Investigational medicinal product name	MEDI2070
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

MEDI2070 700mg was administered by IV infusion at Week 0 (Day 1) and Week 4 in double-blind period. MEDI2070 was delivered in 5.0% w/v dextrose in a volume of 100 mL over a minimum of 60 minutes using an infusion pump.

Number of subjects in period 1 ^[1]	Placebo	MEDI2070 700mg
Started	60	59
Completed	52	52
Not completed	8	7
Consent withdrawn by subject	5	3
Adverse event, non-fatal	-	1
Subject not entered in open label period	3	1
Lost to follow-up	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Total subjects enrolled worldwide were 121; of which 2 subjects were randomized but not treated. Those 2 subjects were not included in mITT population and data for those 2 subjects were not captured for baseline characteristics.

Period 2

Period 2 title	Open-Label Period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo/MEDI2070 210mg

Arm description:

Subjects randomized to placebo arm in double-blind period received 210 mg SC MEDI2070 every 4 weeks (Q4W) during the 100-week, open-label treatment period.

Arm type	Experimental
Investigational medicinal product name	MEDI2070
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

MEDI2070 210 mg was administered by subcutaneous (SC) injection every 4 weeks (Q4W) between Week 12 and Week 112 in open-label period.

Arm title	MEDI2070 700mg/MEDI2070 210mg
-----------	-------------------------------

Arm description:

Subjects randomized to MEDI2070 700mg arm in double-blind period received 210 mg SC MEDI2070 Q4W during the 100-week, open-label treatment period.

Arm type	Experimental
Investigational medicinal product name	MEDI2070
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

MEDI2070 210 mg was administered by SC injection every 4 weeks (Q4W) between Week 12 and Week 112 in open-label period.

Number of subjects in period 2	Placebo/MEDI2070 210mg	MEDI2070 700mg/MEDI2070 210mg
Started	52	52
Completed	33	24
Not completed	19	28
Consent withdrawn by subject	9	19
Adverse event, non-fatal	1	-
Not specified	1	3
Lost to follow-up	3	4
Development of study-specific withdrawal criteria	5	2

Primary: Percentage of Subjects With Crohn's Disease Activity Index (CDAI) Response at Week 8

End point title	Percentage of Subjects With Crohn's Disease Activity Index (CDAI) Response at Week 8
End point description: A CDAI is a multi-item instrument which measures severity of active Crohn's Disease monitored over 7 days includes subject reported symptoms, physician-assessed signs, and laboratory markers. CDAI score = Sum of weighted scores for subjective items (number of liquid/soft stools, degree of abdominal pain, general well-being); and objective items (associated signs, use of anti-diarrhoeal medication, abdominal mass, haematocrit, daily morning temperature, body weight). CDAI scores range approximately from 0 to 600, higher scores indicating greater disease activity. The CDAI response at Week 8 is defined as either CDAI score of less than (<) 150 or CDAI reduction from baseline of at least 100 points, where baseline was last non-missing observation prior to first administration of the study drug. Modified Intent-to-treat (mITT) population was analysed for this end point, which included all subjects who were randomized and received at least 1 dose of study drug in double-blind period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 December 2012	<ul style="list-style-type: none">• Exclusion Criterion revised to include eye disorders (not including refraction errors), neurological disorders, myocardial infarction or acute coronary syndrome within 12 months prior to screening• Three items added to the list of reasons for discontinuation of study drug: recurrence of significant Crohn's disease symptoms, according to investigator judgment, subject develops a malignant neoplasm, and mycobacterial infections, systemic fungal infections, or viral infections requiring hospitalization or parenteral antiviral therapy .• For subjects permanently discontinued from study drug, instruction was added that investigators were to refer subjects for appropriate medical care in coordination with subject's personal physician• Requirement added that subjects be followed for at least 6 hours after IV administration of first dose of study drug and, if no adverse reaction, 2 hours after administration of second dose

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
