General information about the trial

Main objective of the trial:

The objective of this study is to investigate the effect of Linagliptin in comparison to placebo on the urine albumin-to-creatinine ratio (UACR) in patients with high blood pressure and an increased albumin excretion.

Protection of trial subjects:

A patient will only be enrolled in the study after obtaining a written informed consent to participation. During patient information, the investigator must provide a complete explanation of the study (benefits, risks, rights and obligations) and check that the patient fulfills all of the inclusion criteria and none of the exclusion criteria
