

Clinical trial results:

A 48 weeks study of three different dose regimens of BI 655066 administered subcutaneously in patients with moderate to severe chronic plaque psoriasis (randomised, dose-ranging, active-comparator-controlled (ustekinumab), double-blind within dose groups of BI 655066)

Summary

EudraCT number	2012-004384-48
Trial protocol	FI SE DE NO
Global end of trial date	31 July 2015

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 September 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 November 2014
Global end of trial reached?	Yes
Global end of trial date	31 July 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall purpose of this trial is to assess clinical efficacy and safety of different subcutaneous doses of BI 655066 in adult patients with chronic plaque psoriasis in order to select doses for further clinical trials.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all patients as required.

Background therapy: -

Evidence for comparator:

Ustekinumab (Stelara®) administered by subcutaneous injection plus two saline injections at Week 0, Stelara® injection plus one saline injection at Weeks 4 and 16. Stelara® dose was 45 mg for patients with body weight ≤100 kg at randomisation or 90 mg for patients with body weight >100 kg at randomisation.

Actual start date of recruitment	26 February 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 37
Country: Number of subjects enrolled	Finland: 4
Country: Number of subjects enrolled	France: 30
Country: Number of subjects enrolled	Germany: 27
Country: Number of subjects enrolled	Norway: 7
Country: Number of subjects enrolled	Sweden: 6
Country: Number of subjects enrolled	United States: 120
Worldwide total number of subjects	231
EEA total number of subjects	74

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	210
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that they (the subjects) met all strictly implemented inclusion/exclusion criteria. Subjects were not to be randomised to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Assessor, Subject

Blinding implementation details:

The different dose groups of BI 655066 were double-blind. Patients, investigators, and efficacy assessors were blinded to treatment. Stelara® was open-label to investigators and blinded to patients and efficacy assessors.

Arms

Are arms mutually exclusive?	Yes
Arm title	BI 655066 18 mg

Arm description:

18 mg BI 655066 administered by subcutaneous injection plus two placebo matching BI 655066 injections at Week 0, followed by two placebo matching BI 655066 injections each at Weeks 4 and 16.

Arm type	Experimental
Investigational medicinal product name	BI 655066 18 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

18 mg BI 655066 administered by subcutaneous injection at Week 0.

Investigational medicinal product name	Placebo matching BI 655066
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Two placebo matching BI 655066 injections administered each at Weeks 0, 4 and 16.

Arm title	BI 655066 90 mg
------------------	-----------------

Arm description:

90 mg BI 655066 administered by subcutaneous injection plus two placebo matching BI 655066 injections at Week 0, followed by 90 mg BI 655066 plus one placebo matching BI 655066 injection at Weeks 4 and 16.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	BI 655066 90 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
90 mg BI 655066 administered by subcutaneous injection at Weeks 0, 4 and 16.	
Investigational medicinal product name	Placebo matching BI 655066
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
2 placebo matching BI 655066 injections administered at Weeks 0 and 1 placebo matching BI 655066 injection at Weeks 4 and 16.	
Arm title	BI 655066 180 mg
Arm description:	
180 mg BI 655066 administered by subcutaneous injection as two injections plus a placebo matching BI 655066 injection at Week 0, followed by 180 mg BI 655066 administered as two injections at Weeks 4 and 16.	
Arm type	Experimental
Investigational medicinal product name	BI 655066 180 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Number of subjects in period 1^[1]	Stelara®
Started	40
Completed	39
Not completed	1
Adverse event, non-fatal	1
Lost to follow-up	-
Other reason	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

Statistical analyses

Statistical analysis title	Statistical Analysis 1
-----------------------------------	------------------------

Statistical analysis description:

The difference in proportion responding between BI 90+180 mg and Stelara® was estimated and tested using the Cochran-Mantel-Haenszel (CMH) risk difference estimate stratified by the randomisation factors of weight (≤ 100 kg vs. > 100 kg) and prior exposure to 2 or more Tumour Necrosis Factor (TNF) antagonists with discontinuation due to lack of efficacy, with weights proposed by Greenland/Robins. Difference calculated as BI 90+180 mg minus Stelara®.

Comparison groups	Stelara® v BI 655066 90+180 mg
Number of subjects included in analysis	123
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 ^[6]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Mean difference (net)
Point estimate	36.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	19
upper limit	53.8

Notes:

[6] - Pairwise comparisons of all doses and treatments were conducted using the same CMH methods; 95% confidence intervals (CI) as well as nominal p-values of the comparison of doses were provided. There were no adjustments for multiplicity.

Secondary: Achievement of $\geq 75\%$ reduction from baseline in PASI score (PASI75) at Weeks 12 and 24

Statistical analyses

Statistical analysis title	Statistical Analysis 1
-----------------------------------	------------------------

Statistical analysis description:

The difference in proportion responding between BI 90+180 mg and Stelara® was estimated and tested using the Cochran-Mantel-Haenszel (CMH) risk difference estimate stratified by the randomisation factors of weight (≤ 100 kg vs. > 100 kg) and prior exposure to 2 or more TNF antagonists with discontinuation due to lack of efficacy, with weights proposed by Greenland/Robins. Difference calculated as BI 90+180 mg minus Stelara®.

Comparison groups	Stelara® v BI 655066 90+180 mg

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 March 2014	Global protocol amendment 1 introduced the following key changes: 1. The inclusion criterion 8 was modified to add having vasectomized sexual partner(s) as an acceptable option of contraception for female patients. 2. Rules for blinding/unblinding of the trial team, investigators, efficacy assessors, and patients were specified. Unblinding of the trial bioanalyst and bioanalytical laboratory to support PK/ADA sample bioanalysis was introduced and blinded data reviews of PK/ADA results by the trial team were specified. 3. A restriction on the use of moisturizers/emollients containing retinoids and the use of tanning beds was introduced. Their use was not allowed as it could ameliorate psoriasis disease activity. 4. It was specified that body temperature could be measured orally or tympanically. The same BP recording instrument was to be used if possible. 5. Procedures for re-screening of patients in exceptional cases were introduced. 6. Further details on the procedure of obtaining skin biopsies were added.
25 June 2014	Global protocol amendment 2 allowed for a pre-randomisation call to the IRT for logistical reasons.
03 July 2014	Global protocol amendment 3 introduced the following key changes: 1. Rules for roll-over to the open-label extension study 1311.13 were specified 2. Exclusion criterion 4 was specified with regards to latent and active tuberculosis. Patients with latent or active TB were to continue to be excluded from the trial, but in case of a positive QuantiFERON test and documentation of adequately treated infection with no signs and symptoms of currently ongoing active or latent TB infection, the patients could have been included. 3. Exclusion criterion 11, concerning prior participation in another trial, was modified to be consistent with the restricted medication rules.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
