

Clinical trial results:

An Open-label, Single arm, Multicenter Phase 2 Study of the Bruton's Tyrosine Kinase Inhibitor PCI-32765 (Ibrutinib) in Patients with Relapsed or Refractory Chronic Lymphocytic Leukemia or Small Lymphocytic Lymphoma with 17p Deletion (RESONATE™-17)

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	20 June 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 June 2014
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the efficacy of ibrutinib in terms of ORR per IWCLL 2008 criteria in subjects with relapsed or refractory CLL/SLL with documented del17p, who received a minimum of 1 prior line of systemic treatment.

Protection of trial subjects:

The study was conducted in accordance with the Declaration of Helsinki and ICH GCP.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 January 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 14
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Turkey: 11
Country: Number of subjects enrolled	United States: 84
Country: Number of subjects enrolled	Sweden: 8
Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	New Zealand: 2
Worldwide total number of subjects	144
EEA total number of subjects	38

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	75
From 65 to 84 years	67
85 years and over	2

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

One hundred forty-five subjects were enrolled and 144 subjects received at least 1 dose of Ibrutinib and constitute the all treated population and the safety analysis set.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ibrutinib
-----------	-----------

Arm description:

All subjects who received at least one dose of Ibrutinib 420 mg (3 x 140-mg capsules) orally once daily.

Arm type	Experimental
Investigational medicinal product name	Ibrutinib
Investigational medicinal product code	PCI-32765
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

All subjects received Ibrutinib 420 mg (3 x 140-mg capsules) orally once daily.

Number of subjects in period 1	Ibrutinib
Started	144
Completed	101
Not completed	43
Physician decision	4
Unacceptable toxicity, AE or death	18
Progressive Disease	18
Withdrawal of consent for treatment	3

Baseline characteristics

Reporting groups

Reporting group title	Ibrutinib
-----------------------	-----------

Reporting group description:

All subjects who received at least one dose of Ibrutinib 420 mg (3 x 140-mg capsules) orally once daily.

Reporting group values	Ibrutinib	Total	
Number of subjects	144	144	
Age Categorical			
Units: Subjects			
<=18 years	0	0	
Between 18 and 65 years	75	75	
>=65 years	69	69	
Age Continuous			
Units: years			
arithmetic mean	64.4		
standard deviation	± 9.9	-	
Gender, Male/Female			
Units: Subjects			
Female	48	48	
Male	96	96	

End points

End points reporting groups

Reporting group title	Ibrutinib
Reporting group description: All subjects who received at least one dose of Ibrutinib 420 mg (3 x 140-mg capsules) orally once daily.	
Subject analysis set title	Ibrutinib
Subject analysis set type	Intention-to-treat
Subject analysis set description: All subjects who received at least one dose of ibrutinib 420 mg (3 x 140-mg capsules) orally once daily.	

Primary: Overall Response Rate

End point title	Overall Response Rate ^[1]
End point description: The primary objective of this study is to evaluate the efficacy of Ibrutinib in terms of ORR according to an Independent Review Committee (IRC). ORR based upon IRC assessment is the proportion of responders in the all treated population. Responders were subjects who achieved partial response (PR) or better, ie, complete response (CR), complete response with incomplete marrow recovery (CRi), nodule partial response (nPR) or PR, per IWCLL 2008 criteria with the clarification for treatment-related lymphocytosis.	
End point type	Primary
End point timeframe: The median time on study for all treated participants is 11.5 (range 0.5 - 16.6) months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Response rate and its 95% CI was calculated based on normal approximation with Wilson's score method.	

End point values	Ibrutinib			
Subject group type	Subject analysis set			
Number of subjects analysed	144			
Units: % of participants with response by IRC				
number (confidence interval 95%)	63.9 (55.8 to 71.3)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants With Treatment Emergent Adverse Events (AEs)

End point title	Number of Participants With Treatment Emergent Adverse Events (AEs)
End point description: Number of participants who had experienced at least one treatment emergent AE	
End point type	Secondary
End point timeframe: From first dose of Ibrutinib to within 30 days of last dose for each participant or until study closure	

End point values	Ibrutinib			
Subject group type	Subject analysis set			
Number of subjects analysed	144			
Units: participants				
number (not applicable)	144			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of Ibrutinib to within 30 days of last dose

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 February 2013	<ul style="list-style-type: none">• Changed the exclusion criteria governing number of prior lines of systemic therapy for CLL from 4 or more to 5 or more due to rapidity by which subjects with del17p CLL become relapsed or refractory to historical therapies.• Updated text for the management of ibrutinib with concomitant CYP3A4/5 inhibitors.• Updated text for the management of ibrutinib with concomitant anticoagulation therapy. Provided further clarification for restart of ibrutinib after anticoagulation therapy.• Provided guidance on perioperative holding of ibrutinib that was not previously available.• Clarified that ophthalmologic examination should be performed by an ophthalmologist.• Clarified that CT scans needed to be obtained for neck, chest, abdomen, and pelvis.• Except in the UK, PROs were no longer collected in the study.
16 December 2013	<ul style="list-style-type: none">• Aligned the efficacy and safety populations to subjects who have received at least 1 dose of ibrutinib.• Delayed timing of the primary analysis to at least 12 months after the last subject's first dose of ibrutinib. Provided clarification that any updates to the timing of the primary or final analysis would be pre-specified in the SAP and would not warrant another protocol amendment as long as study conduct was not impacted.• Updated guideline for the use of concomitant QT-prolonging agents.• Updated guideline for concomitant use of anticoagulation and antiplatelet agents and included precautions for commonly used supplements such as fish oil and Vitamin E.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
